

Biology 374 "Conservation Biology"

Instructor: Dr. Debbie Schlenoff

schlenof@uoregon.edu

(Please include "374" or "conbio" in subject heading.)

Office: 15A Klamath

Office hours: Mondays 1:30-2:30 and by appointment

GTF: Noah Simons

nsimons@uoregon.edu

Office Hours: Tuesdays 12-2:00 in CON 366 A.

Website: All course documents will be posted on the **Blackboard** Course Website.

Course Description: **Conservation Biology** is a multidisciplinary, applied science devoted to preserving the remaining biological diversity of our planet. We will study the foundational concepts and principles of conservation biology and use case studies and examples to illustrate these principles in practice. We will examine the causes and consequences of diversity losses; the genetic and evolutionary consequences of small populations; population viability modeling and other tools; and approaches to conserving diversity including reserve design, corridors, captive breeding, species reintroductions and conservation laws. The prerequisite for this course is either Bi213 or Bi253.

Course Objectives

- Learn the fundamental principles and concepts of conservation biology.
- Apply these principles to conservation strategies for species and ecosystem management.
- Improve scientific literacy and communication skills.
- Independently and collaboratively research and evaluate conservation issues and actions.
- Examine how conservation biology relates to our own lives.
- Gain an appreciation for the diversity of the natural world!

Readings, mostly journal articles from the scientific literature, are **required** reading for this course. Most of the readings will be available on Blackboard. The readings will be announced in class and on Blackboard. We will be actively engaged in discussing the readings during class so please read them *before* the due date.

Optional Recommended Text: Primack, Richard B., Essentials of Conservation Biology, 5th edition, Sinauer. ISBN 978-0-87893-640-3.

Course Format

Lectures. 10:00-11:20 MW in 41 LIB

You will be responsible for all material presented in lecture.

The course schedule is tentative and subject to change; adjustments will be announced in class.

Lecture meetings will be a mix of lecture and discussion. Discussions will include questions on any assigned readings, so I have a strong expectation that you will have read the material before coming to class and arrive ready to participate. There are group and writing activities that occur during lecture. It is our expectation that you participate in these activities. Your active involvement promotes understanding of the material and preparation for exam questions. *There is a strong positive correlation between attendance in lecture and class grades.*

Lecture outlines containing the text of the PowerPoint slides are available on Blackboard. Please keep in mind that these are merely outlines for your convenience in taking and organizing notes. They are not meant to serve as a complete set of lecture notes when studying for the exams.

I appreciate feedback on the lectures. Questions are welcome and encouraged during and after lecture, during office hours, and via e-mail.

Discussion Sections Tuesdays, 33 KLA (9:00 or 10:00- Please attend the section for which you are registered.)

Participation in discussion sections is a required part of this class and will count toward your final grade. Occasionally there will be short assignments associated with discussion section activities. These will be announced in class and on Blackboard. Sections will provide an opportunity to question and discuss some of the topics presented in the readings and lecture. Some weeks may be used to discuss readings from the primary literature or engage in participatory group activities. Project presentations will occur in section.

Grading Evaluation:

20% Midterm Exam

25% Final Exam

15% Poster project

20% Term paper

+3% Electronic comments, questions and answers on term paper abstracts

5% Discussion Section Participation

6% Assignments (due in discussion section)

6% Reading Quizzes and Lecture Participation

Total = 100%

Exams: Exams will include material from the lectures, readings, in-class activities, discussion sections and the video clips shown in class.

Exams will be mixed format (short answer, multiple choice, short essay). Details will be announced in class.

Make-up Exam Policy: **There will be NO make up exams** except in the case of a documented severe medical condition or other extreme documentable emergency. It is your responsibility to contact the instructor as soon as possible.

Poster Project

You will work in groups of three to create a poster focused on an endangered species listed on the IUCN Red List. We will use class time for a poster session where your posters will be evaluated to determine how well you have described the work done on your species and convinced the audience of the conservation needs of your focal species. You will be expected to answer questions about your own poster and to be an inquisitive audience toward other poster groups. Posters are due 10/29. Your group will be randomly assigned to one of the in-class poster sessions. You will receive more information about what your poster should include and how it will be evaluated in discussion section and on Blackboard.

Term Project

Each of you will independently research a topic in conservation biology that results in an individually written seven page term paper which will be handed in as a hard copy on 11/19. You will also post an abstract of your paper electronically on Blackboard and will be expected to comment on some other abstracts and respond to comments from other students in the class. More details about the project requirements will be provided in class and on Blackboard.

Discussion Activities

Your score for each week will be determined by attendance, participation and completion of any assigned exercises.

Homework assignments will be due in discussion section. One of these assignments will ask you to share a report on “Conservation in the News” so keep your eyes open for interesting articles. Other assignments will be discussed in class.

Lecture Participation and Reading Quiz/Questions: We will collect short comments after class activities or present a short quiz seven times during the term. Six of these will count toward your final grade. You can miss one without penalty. Make-ups will not be administered.

Professional conduct

Plagiarism will not be tolerated. You are expected to do your own work on assignments, projects, and exams. When writing up your assignments and papers, you are expected to paraphrase (use your own words). When writing up your project papers and posters/presentations, give credit to the sources of your information. You are encouraged to discuss ideas with each other and to study together, but don't copy someone else's work, or allow them to copy yours.

Academic dishonesty is a serious offense. Please refer to the University of Oregon Student Conduct Code by which all students are expected to abide.

Classroom Etiquette:

1. Please arrive on time.
2. Please don't leave early. This is very disruptive to everyone. In turn, I will not lecture beyond 11:50. If you have an unusual circumstance and must leave early, then please sit near the exit so you can leave unobtrusively.
3. Please refrain from engaging in activities that could be distracting to your fellow students.
 - We ask that you not converse with your neighbors when someone else is talking (instructor or classmate) as this interferes with the ability of other students to learn.
 - Please turn your cell phones off during lecture.
 - Please use computers during lecture only to take notes. Other laptop activities have been reported to be distracting to your fellow students.
 - Please do not pack up your things early as this makes it difficult for students around you to hear the end of the lecture.

If you are having a problem that interferes with your ability to do the work in this class, please tell us about it as soon as you can. We may be able to refer you to someone for help or to make special arrangements if the need is real and if you have done your best to deal with the situation in a timely manner.

The University of Oregon is working to create inclusive learning environments. Please notify me if there are aspects of the instruction or design of this course that result in barriers to your participation. You may also wish to contact Disability Services in 164 Oregon Hall at 346-1155 or disabsrv@uoregon.edu

The following tentative schedule is a work in progress and is subject to change. Changes will be announced in class and on Blackboard.

This is a partial and tentative list of readings. Check Blackboard for assigned readings.

Most of the following topics are covered in the Primack textbook. Please ask if you need assistance locating readings.

WK	LECTURE TOPICS and READINGS	DISCUSSION SECTION (Fridays)
<u>PART I: Identifying the Problems</u>		
1	<p>9/29 L: Introduction to Conservation Biology Read the syllabus! 10/1 L: Biodiversity, Species concepts Reading: What is Conservation Biology? Soule (on BB)</p>	<p>9/30 Discussion intro. Project description <i>Activity: Measuring biodiversity</i></p>
2	<p>10/6 L: Conservation values, Ecosystem Services Reading: What to let go? Marris Skim: Effect of Scientific Evidence on Conservation Practitioners' Management Decisions 10/8 L: Extinction and Threats to Biodiversity Reading: Ecosystem Decay of Amazonian Forest Fragments. Laurance et al.</p>	<p>10/7 Measuring biodiversity activity continued. Finalize focal species for poster.</p>
3	<p>10/13 L: Threats to biodiversity I: Habitat loss & fragmentation Reading: Human-induced evolution caused by unnatural selection. Allendorf and Hard. 10/15 L: Threats to biodiversity II: Overexploitation, Invasives, and Climate change Reading: Flycatchers and phenological shifts</p>	<p>10/14 Work on poster presentations-- Bring worksheet.</p>
4	<p>10/20 L: Conservation genetics and the problems with small populations Reading: Considering threats to the viability of small populations...Lacy 10/22 L: More problems with small populations: Allee effect and inbreeding, Stochasticity and Ne Reading: Inbreeding and outbreeding depression</p>	<p>10/21 All Posters Due. Poster presentations Session 1 Choose individual term paper topics.</p>
<u>PART II: Conserving Species</u>		
5	<p>10/27 L: Modeling: MVPs, PVA, Protecting species, Establishment Programs Reading: Effective population size in a bottlenecked fur seal population 10/29 L: Conservation Behavior Reading: Fallow Deer</p>	<p>10/28 Poster presentation Session 2.</p>
6	<p>11/3 L: Conserving Imperiled Species-- ESA and other laws protecting species Reading: TBA 11/5 Midterm EXAM</p>	<p>11/4 Genetic Drift Simulation. Assignment Due: Conservation in the News (see Bb)</p>

<u>PART III: Conserving Ecosystems</u>		
7	<p>11/10 Guest Lecture: Josh Laughlin of Cascadia Wildlands (wolves and trophic cascades.) Reading: Ripple and Beschta Restoring Yellowstone's aspen with wolves</p> <p>11/12 Protected Areas: Reserve Programs Reading: Nature- Averting biodiversity collapse</p>	<p>11/11 Assignment due: Bring a draft of your term paper to section. Peer review Term paper</p>
8	<p>11/17 L: Guest lecture??: from McKenzie River Trust. Protected areas and restoration Reading: TBA</p> <p>11/19 L Reserve planning, Corridors. Where to designate Protected Areas Readings: Myers et al. Hotspots Kareiva and Marvier. Coldspots</p>	<p>11/18 Term paper DUE. Post abstracts.</p> <p><i>Activity: corridors</i></p>
9	<p>11/24 L: GAP analysis, Conservation in the Matrix Reading. Species Richness Bees.</p> <p>11/26 L: NO Meeting. Video and assignment (see Bb). Happy Thanksgiving!</p>	<p>11/25 Due: Comments on Discussion Board</p> <p><i>Activity: reserves</i></p>
10	<p>12/1 L: Urban Conservation Reading: Motivations</p> <p>12/3 L: Conclusions Reading: Impact of conservation</p>	<p>12/2 Communication Assignment due. Activity: Mock trial</p>
	<p>FINAL EXAM 10:15 AM, Tuesday, Dec 9</p>
