Humans have been visiting the sand spit at the mouth of Oregon’s Salmon River since Native American times, and more recently since the YWCA established the Westwind summer camp on the site in 1937. The threat of a major tsunami stemming from the Cascadia Fault has made it necessary to relocate the residential cabins much higher up the cliff side. The Interface terminal studio will use the opportunity to explore how buildings in general could provide a more active interface with the natural environment. A preparatory seminar in the fall term will be used to refine objectives and establish preliminary design proposals.
