

BI 121 Lecture 3 **Anatomy & Physiology Lab tomorrow!...**

I. Announcements Q from lecture or lab?

II. Cell Physiology Connections LS ch 2

A. Compartment advantage + Cell survival skills!

B. Organelles \equiv ICF specialty shops: 1. ER– rough & smooth
2. Golgi+ 3. Lysosomes 4. Peroxisomes 5. Mitochondria
pp 20-34, fig 2-1 thru 2-8, pp 20-7, tab 2-1 p 36

C. **Physiol News** Moms eggs execute Dad's mitochondria?

D. What about vaults? LS 2006, p 32 + *Science News*

III. Anaerobic vs Aerobic Metabolism Summary LS ch 2 pp 26-33

A. Key differences fig 2-15 + vpl

B. Selected details: Glycolysis, CAC, ETC, fig 2-9 thru 2-12

IV. Introduction to Genetics LS 2012 ch 2 p 20-1 + Appendix C

A. What's a gene? Where? p A-18, fig C-2, C-3

B. Why are genes important? p A-18

C. What's DNA & what does it look like? pp A-18 thru A-20

D. How does information flow in the cell? fig C-6

E. How does DNA differ from RNA? pp A-20 thru A-22

F. Genetic code? pp A-22, A-23

Why Compartments? Advantage?

**Incompatible reactions can
take place**

Simultaneously!!

Lysosome

Nucleus

Basic Cell Survival Skills?

- 1. Get food**
- 2. Use food**
- 3. Rid wastes**
- 4. Move**
- 5. Reproduce**

Nucleus or nose?

How to live?

**1 e.g. Cell of
100 Trillion!**

Mitochondria: Energy Organelles

fig 2-8 LS 2012

Mom's eggs execute Dad's mitochondria

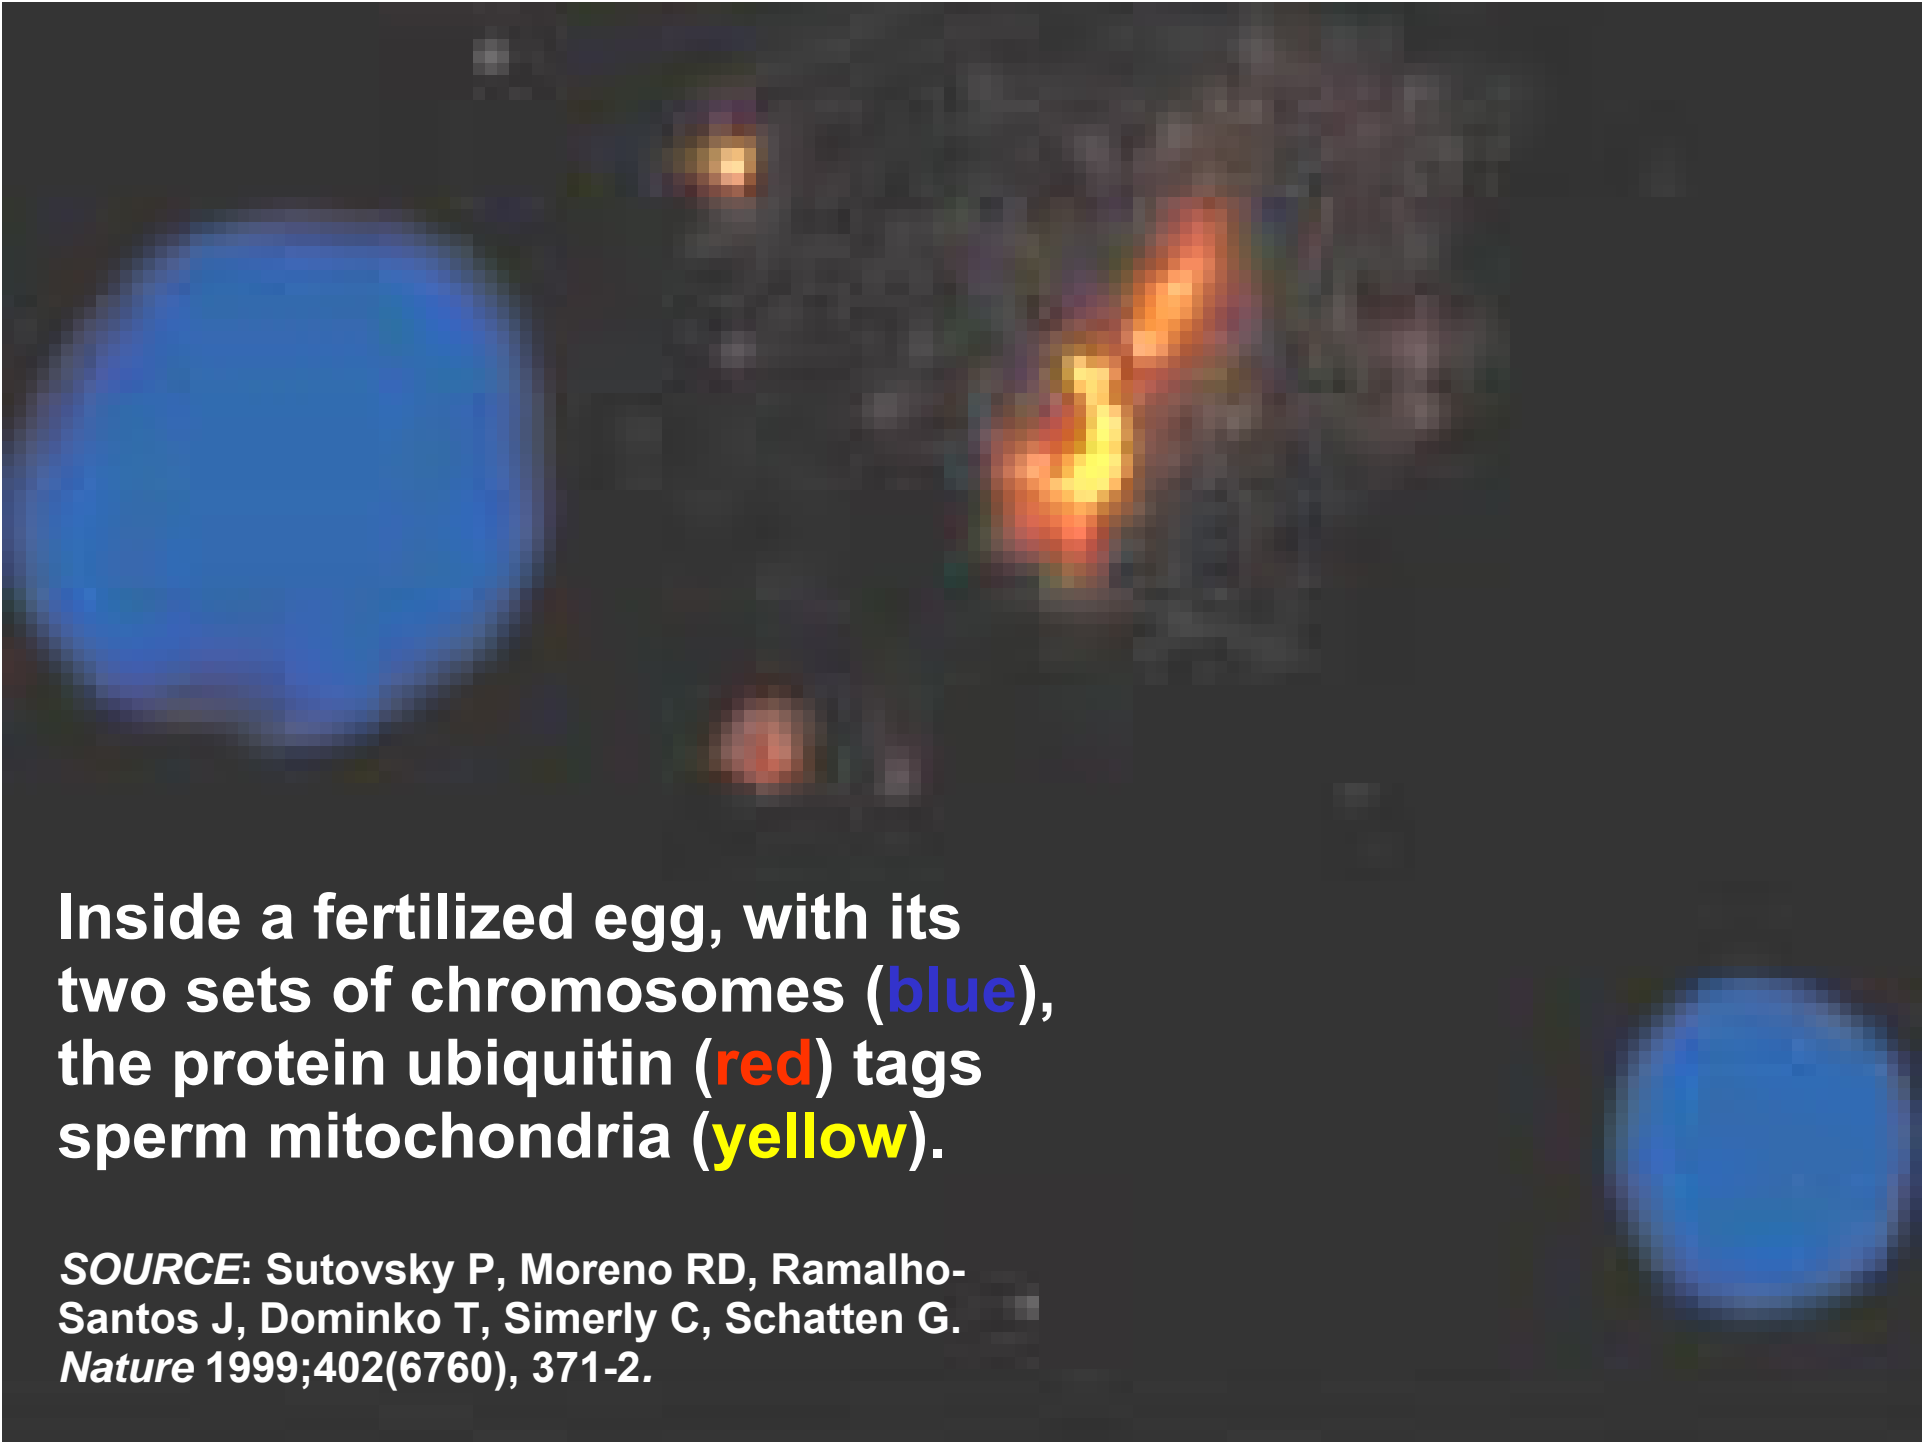

In "Hamlet," Rosencrantz and Guildenstern deliver a letter to the rulers of England that carries the ill-fated duo's own death sentence. Perhaps Shakespeare knew a bit about reproductive biology.

Scientists have now found that during a sperm's creation, its mitochondria—energy-producing units that power all cells—acquire molecular tags that mark them for destruction once the sperm fertilizes an egg. This death sentence, a protein called ubiquitin, may explain why mammals inherit the DNA within mitochondria only from their mothers, a bio-

species mitochondrial inheritance. Sperm mitochondria sometimes avoid destruction when two different species of mice mate, and Schatten's team has shown this also holds true in cattle. It's hard to understand how an egg distinguishes between paternal mitochondria of closely related species, says Schon.

When paternal mitochondria escape destruction in normal mating, the resulting embryo may suffer. Schatten notes that a colleague has found sperm mitochondria in some defective embryos from infertility clinics.

SOURCE: John Travis, *Science News* 2000;157(1), 5.

A fluorescence microscopy image of a fertilized egg. The image shows a large, bright blue circular structure on the left, representing the two sets of chromosomes. In the center and right, there are several smaller, bright yellow and orange structures, representing sperm mitochondria. A red signal is also visible, representing the protein ubiquitin tagging the sperm mitochondria. The background is dark, highlighting the fluorescent structures.

Inside a fertilized egg, with its two sets of chromosomes (blue), the protein ubiquitin (red) tags sperm mitochondria (yellow).

Vaults Hold Cell Mystery

What's in the Vault?

An ignored cell component may often account for why chemotherapy fails

By JOHN TRAVIS

Can you imagine exploring the anatomy of the human body and missing the heart, the organ that sends life-giving blood coursing through the body? Of course not. Or not noticing the brain, the custodian of memories and creator of thoughts? Don't be ridiculous.

Yet cell biologists may soon have to acknowledge an equally unimaginable oversight in their field. For decades, their powerful microscopes have failed to spot a basic cell component of animals and perhaps any organism with a nucleus. Known as vaults, the barrel-shaped particles are three times the size of ribosomes, the org-

through a microscope. But if it were contaminated with objects that shrug off the stain, that sea would be dotted with white islands. Rome likens the strategy to finding an invisible person by looking for an unexplained shadow in the beam of a spotlight.

To Kedersha's surprise, unstained ovoid objects appeared among her coated vesicles. Since some of the stain settled into furrows on top of the unexpected shapes, the negative staining revealed fine details of the exterior of these mysterious interlopers, including arches that reminded Rome and Kedersha of the cell

us something by this incredible structure. And the one thing we might surmise from the structure [of vaults] is that they might contain something," says Rome.

That shape also hints that vaults may pick up their unknown cargo at the nuclear membrane, the barrier that separates the cell's cytoplasm from its nucleus. The nucleus is a fluid-filled sac containing DNA and the machinery required to translate the instructions encoded by that DNA into molecules called messenger RNA. These mRNA strands, as well as other molecules,

Anaerobic vs. Aerobic Metabolism

Anaerobic Glycolysis
"sugar dissolving"
without O₂. Net of 2 ATP
per molecule of glucose

Aerobic Metabolism
+mitochondrial processing of
glucose with O₂. Net of 32 ATP
per molecule of glucose

fig 2-15 LS 2012
