(c) When blood pressure is 120/80:

Cuff pressure is greater than 120 mm Hg.

No blood flows through vessel.

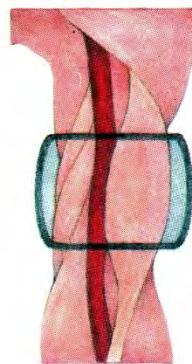

No sound is heard.

Cuff pressure is between 120 and 80 mm Hg.

Blood flow through vessel is turbulent whenever blood pressure exceeds cuff pressure.

Intermittent sounds are heard as blood pressure fluctuates throughout cardiac cycle.

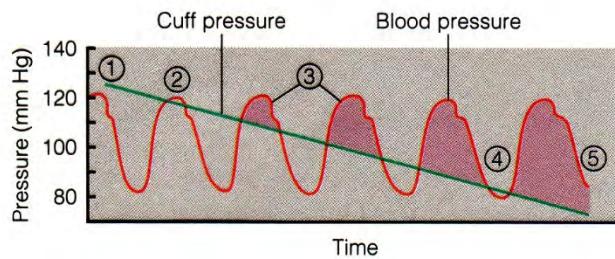

Cuff pressure is less than 80 mm Hg.

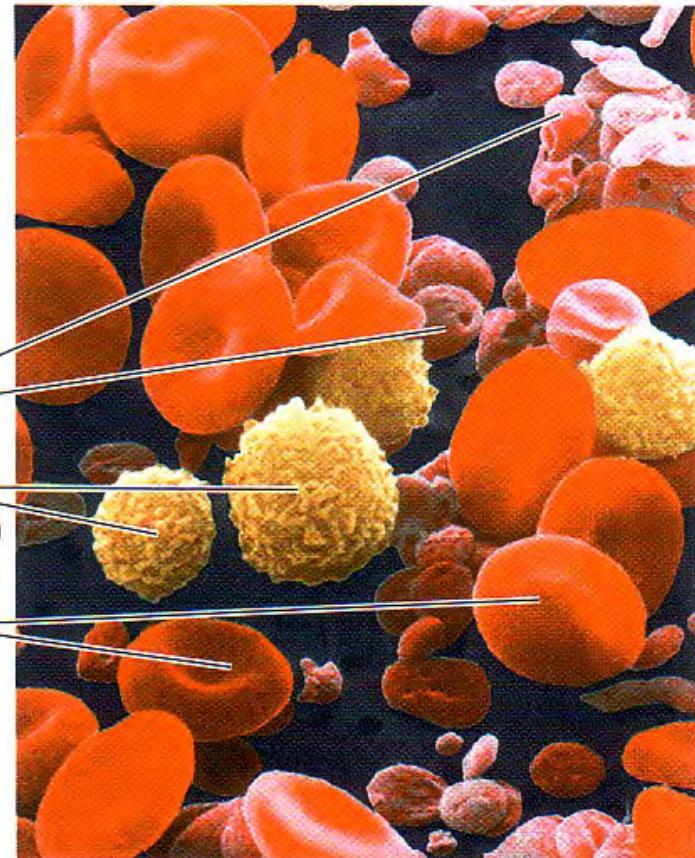

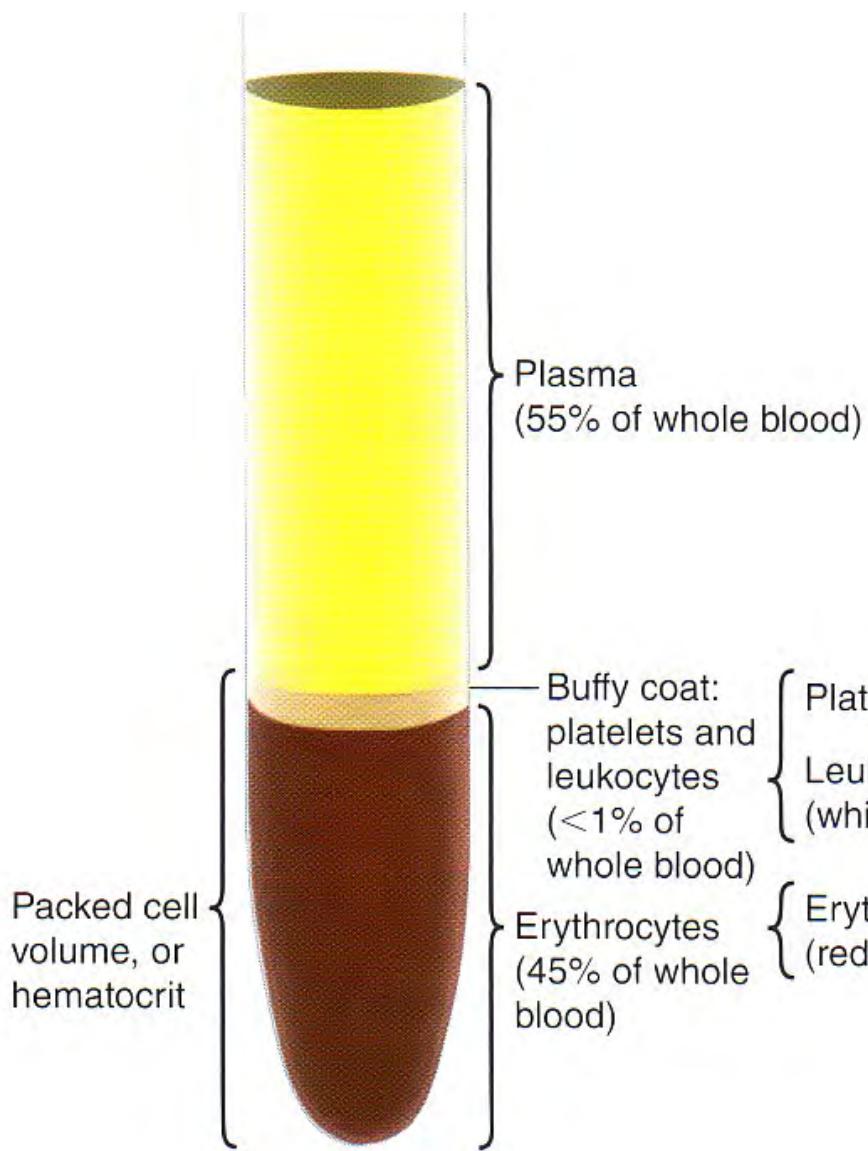

Blood flows through vessel in smooth, laminar fashion.

No sound is heard.

Students who succeed are usually those who:

- (1) **Attend** class regularly
- (2) **Ask** questions
- (3) **Come** to office hours & problem-solving sessions
- (4) **Study** outside class both alone & in study groups
- (5) **Seek** to understand methods & overarching principles/concepts rather than specific answers
- (6) **Teach** or tutor others &
- (7) **Discuss** concepts informally with fellow students.
