

We survived the exam! Happy Halloween!!
Remember nutrient p & have safe fun!

- I. Announcements:** No lab today! Break for exam week!
Next R Blood Chemistry. Thanks sincerely for helping us optimize safety by reading $\geq 2x$ Lab 5, LM pp 5-1 to 5-6.
- II. Blood Form & Function** LS ch 11, DC Module 5 pp 35-9
 - A. Formed vs Nonformed/cells vs plasma** fig+tab 11-1
Cell origin - bone marrow. What's in plasma? p 316
 - B. Red blood cells/erythrocytes: O_2 carrying** pp 317-8
Normal flexible vs fragile sickle cell fig 11-5 p 320
 - C. White blood cells/leukocytes: defense/immunity**
differential + general functions pp 326-30 fig 11-1
 - D. Platelets/thrombocytes: clotting** pp 321-2 fig 11-6
- III. Blood Chemistry Lab: Basics** LM + LS ch 11 & 17
 - A. What's blood typing? ABo System** ch 11 LS pp 341- 4
Rhesus factor? Erythroblastosis fetalis? LS p 343
 - B. *Physiology in the News*: Eat right for your type?**
 - C. What's blood glucose? Diabetes?** LS ch 17 pp 560- 73
 - D. Questions about blood chem lab?**
- IV. Exam Comments + Return**

Ghost, marshmallow
or white blood cell?

off the mark by Mark Parisi

ATLANTA HOME DEPARTMENT STORES. ©2007 MARK PARISI MarkParisi@aol.com

**Today & next week
we'll cover blood
chemistry to
ensure for
adequate lab prep
time & incubation.**

What's in Blood? Plasma & Blood Cells

Sickle-shaped blood cells

Normal red blood cells

© Dr. Stanley Flegler/Visuals Unlimited

What a difference one amino acid can make!

Amino acid sequence of normal hemoglobin:

Val — His — Leu — Thr — Pro — Glu — Glu

Amino acid sequence of sickle-cell hemoglobin:

Val — His — Leu — Thr — Pro — Val — Glu

CENTER FOR SCIENCE IN THE PUBLIC INTEREST

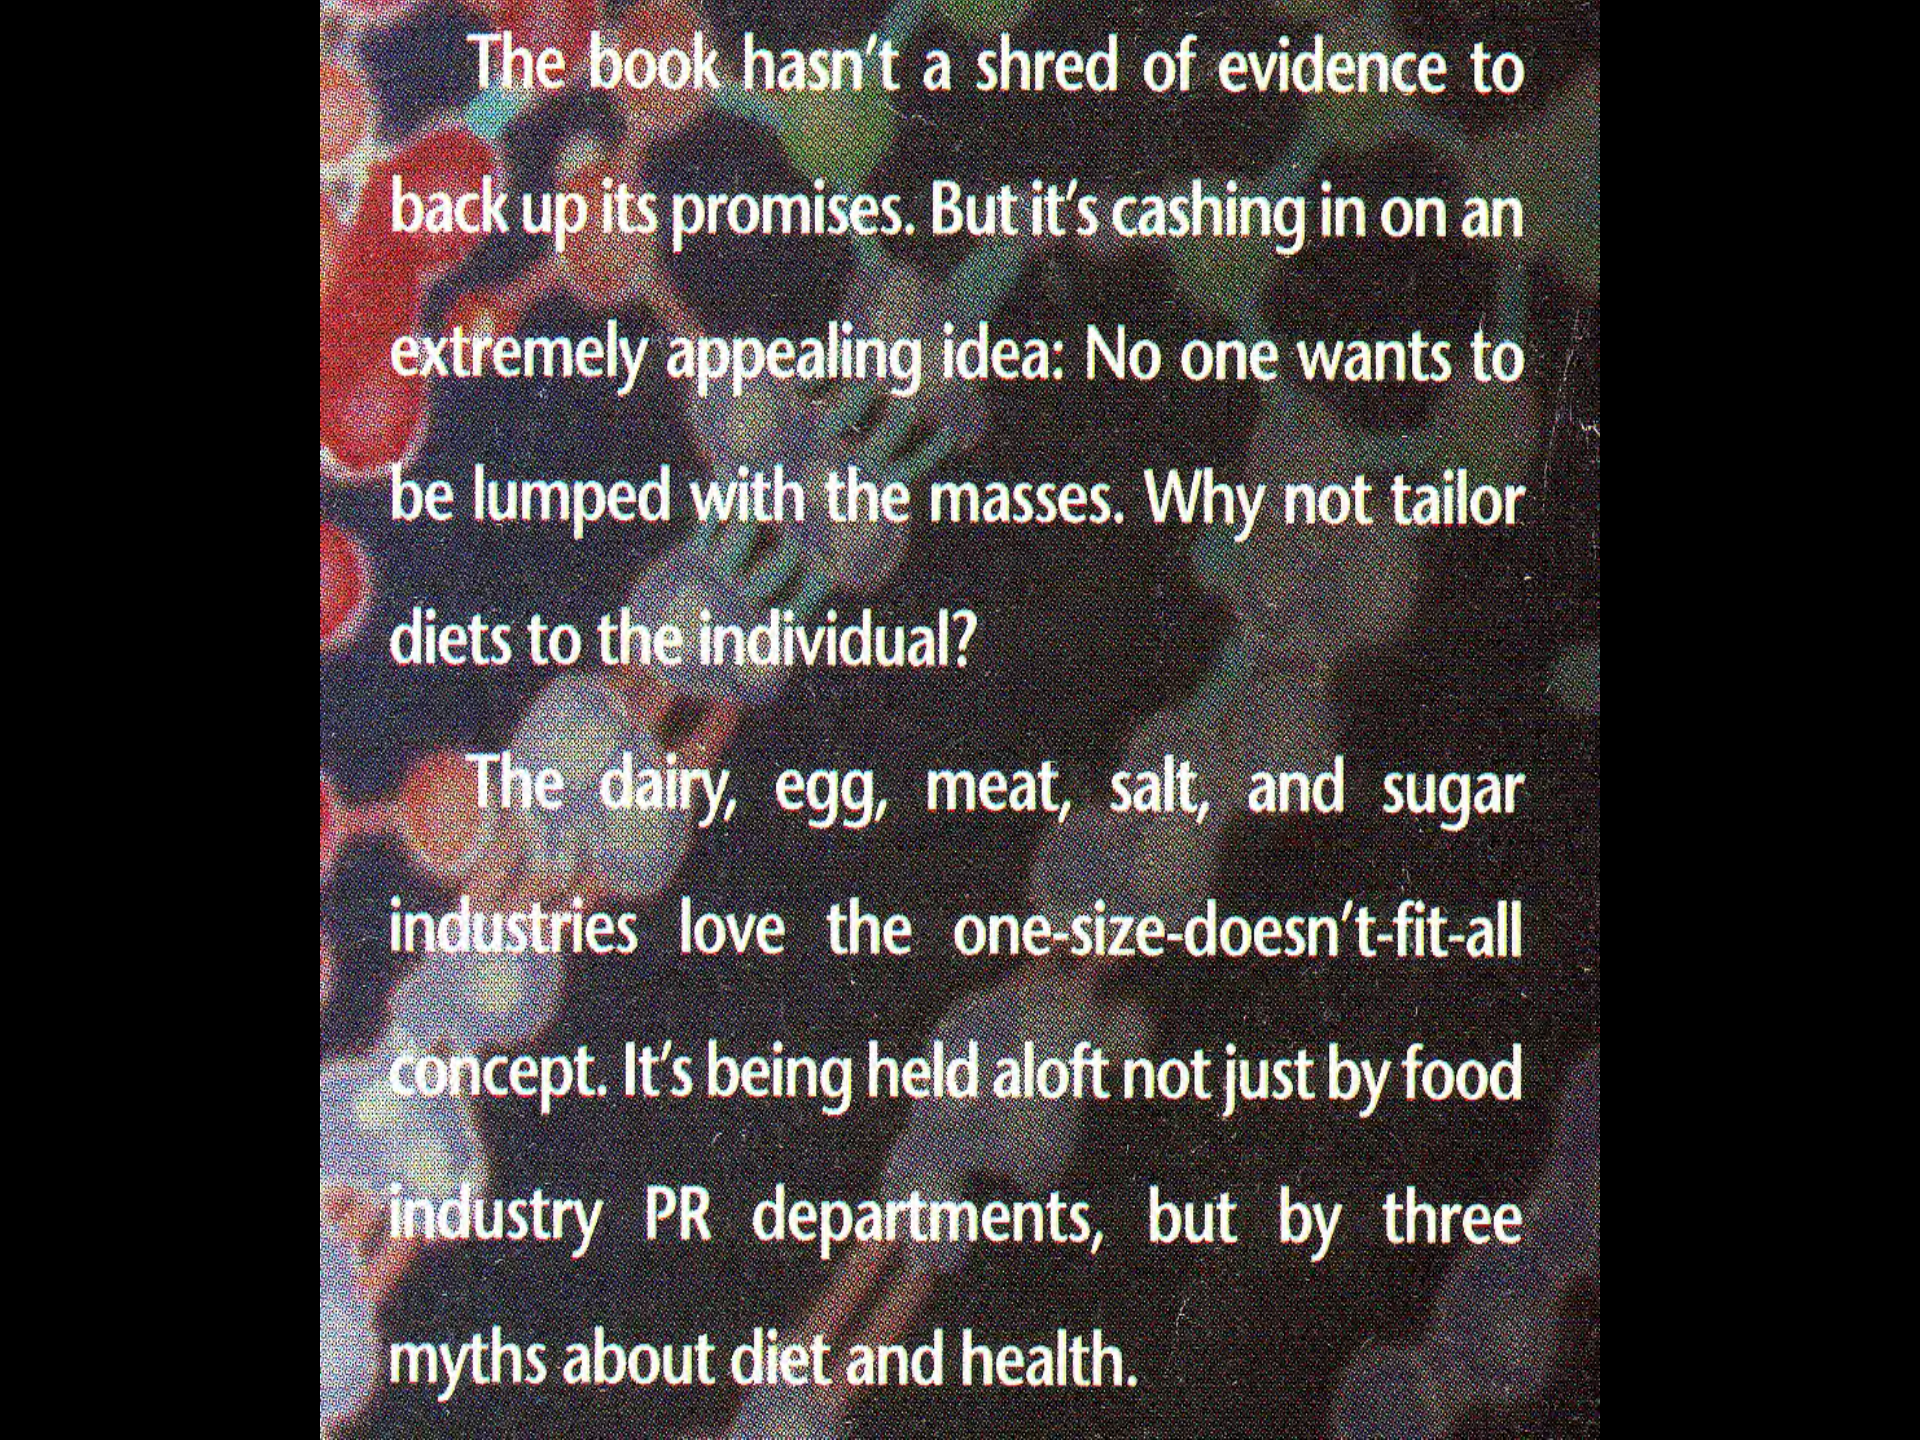

VOLUME 24 / NUMBER 9

Does one size fit all?

BY BONNIE LIEBMAN

"If you've ever suspected that not everyone should eat the same thing or do the same exercise, you're right," says the cover of Peter D'Adamo's *Eat Right 4 Your Type*.

D'Adamo claims that your blood type determines what foods you should eat to avoid obesity, cancer, heart disease, ear infections, learning disabilities, strep throat, infertility, and more. (Example: Type Os should go for ground beef and broccoli but avoid cantaloupe and whole wheat bread.)

The book hasn't a shred of evidence to back up its promises. But it's cashing in on an extremely appealing idea: No one wants to be lumped with the masses. Why not tailor diets to the individual?

The dairy, egg, meat, salt, and sugar industries love the one-size-doesn't-fit-all concept. It's being held aloft not just by food industry PR departments, but by three myths about diet and health.

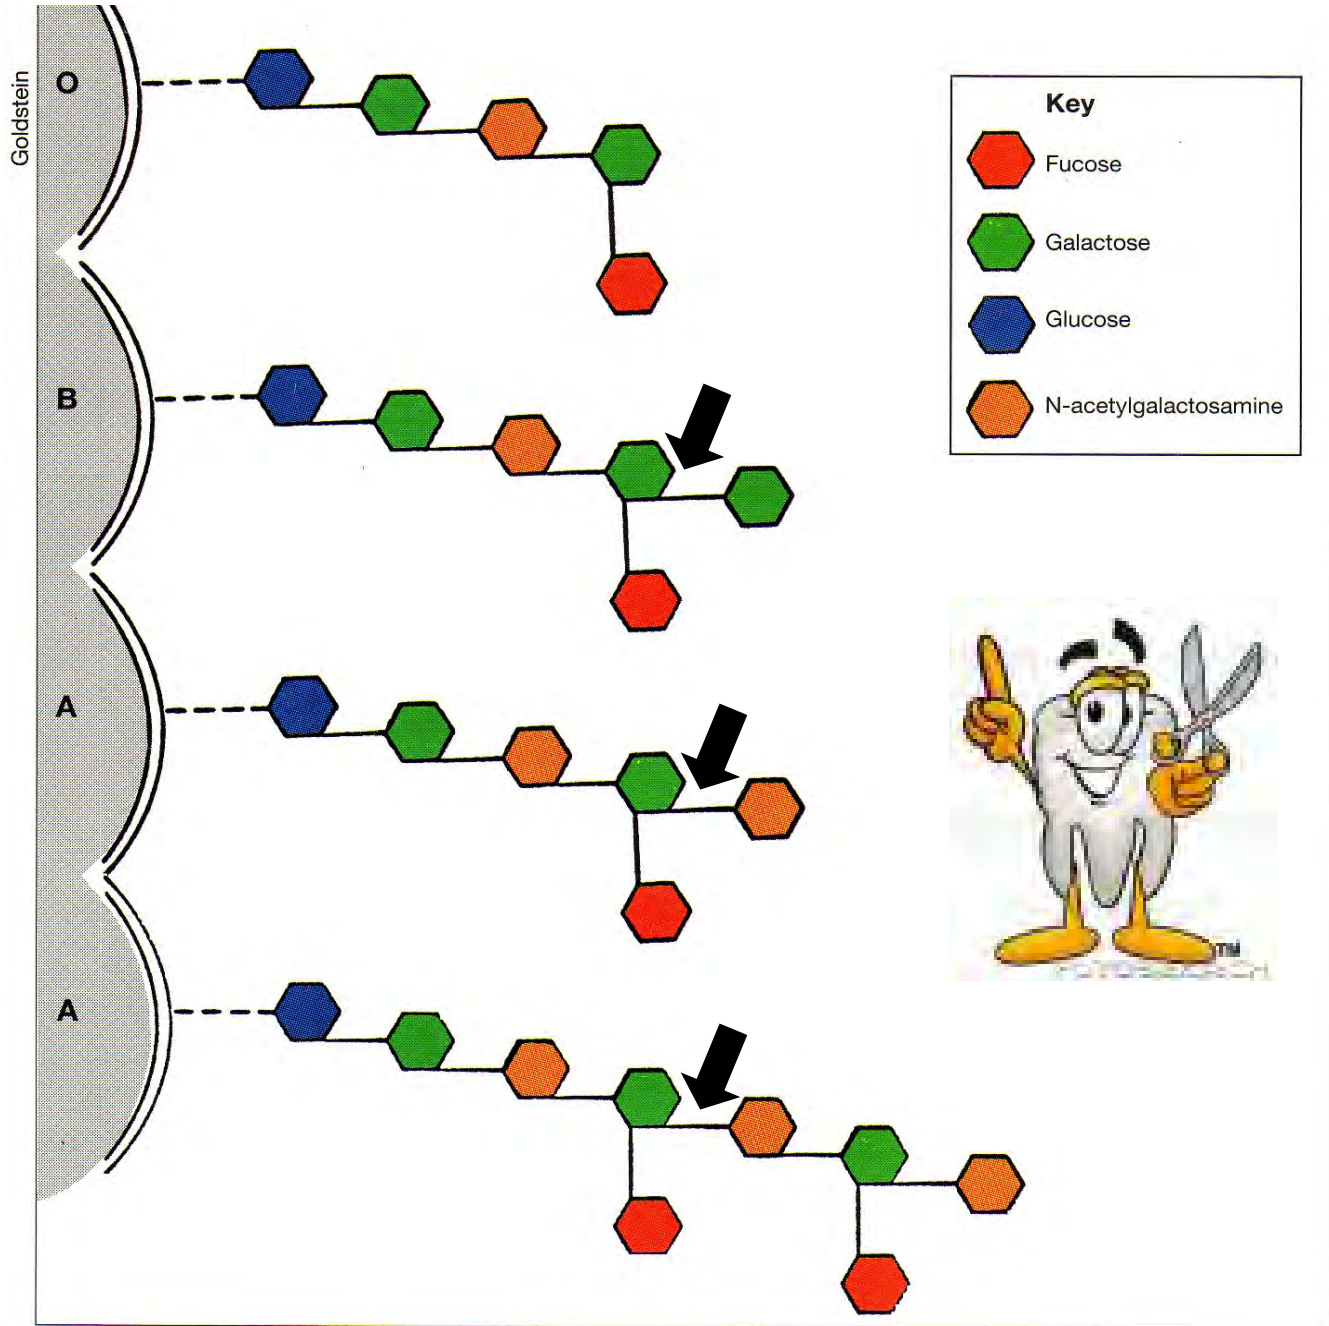

The Weekly Newsmagazine of Science

SCIENCE NEWS

January 11, 1997
Vol. 151, No. 2
Pages 17-32

A microscopic view of blood cells, showing numerous red blood cells (erythrocytes) and several white blood cells (leukocytes) against a dark background. The red blood cells are biconcave discs, while the white blood cells are larger and more irregular in shape.

**Universal
Blood**

All like Type O!

Key	
	Fucose
	Galactose
	Glucose
	N-acetylgalactosamine

Erythroblastosis Fetalis?

**eg, Rh- mom
Rh+ baby**
