Bl 121 Lecture 12

Thanks to you, Holly, Hannah, & Erik!

For your effort & your  !!

I. ***Announcements*** **Thanks for your help with blood lab! Great job! No lab this week. Study for Exam II, Dec 7, Wed, 8 am!**

II. ***Endocrine Connections*** **GH + Peripheral Endocrine Organs** DC Module 13 p 104-113, LS pp 506-25 fig 17-18, 17-19 +…

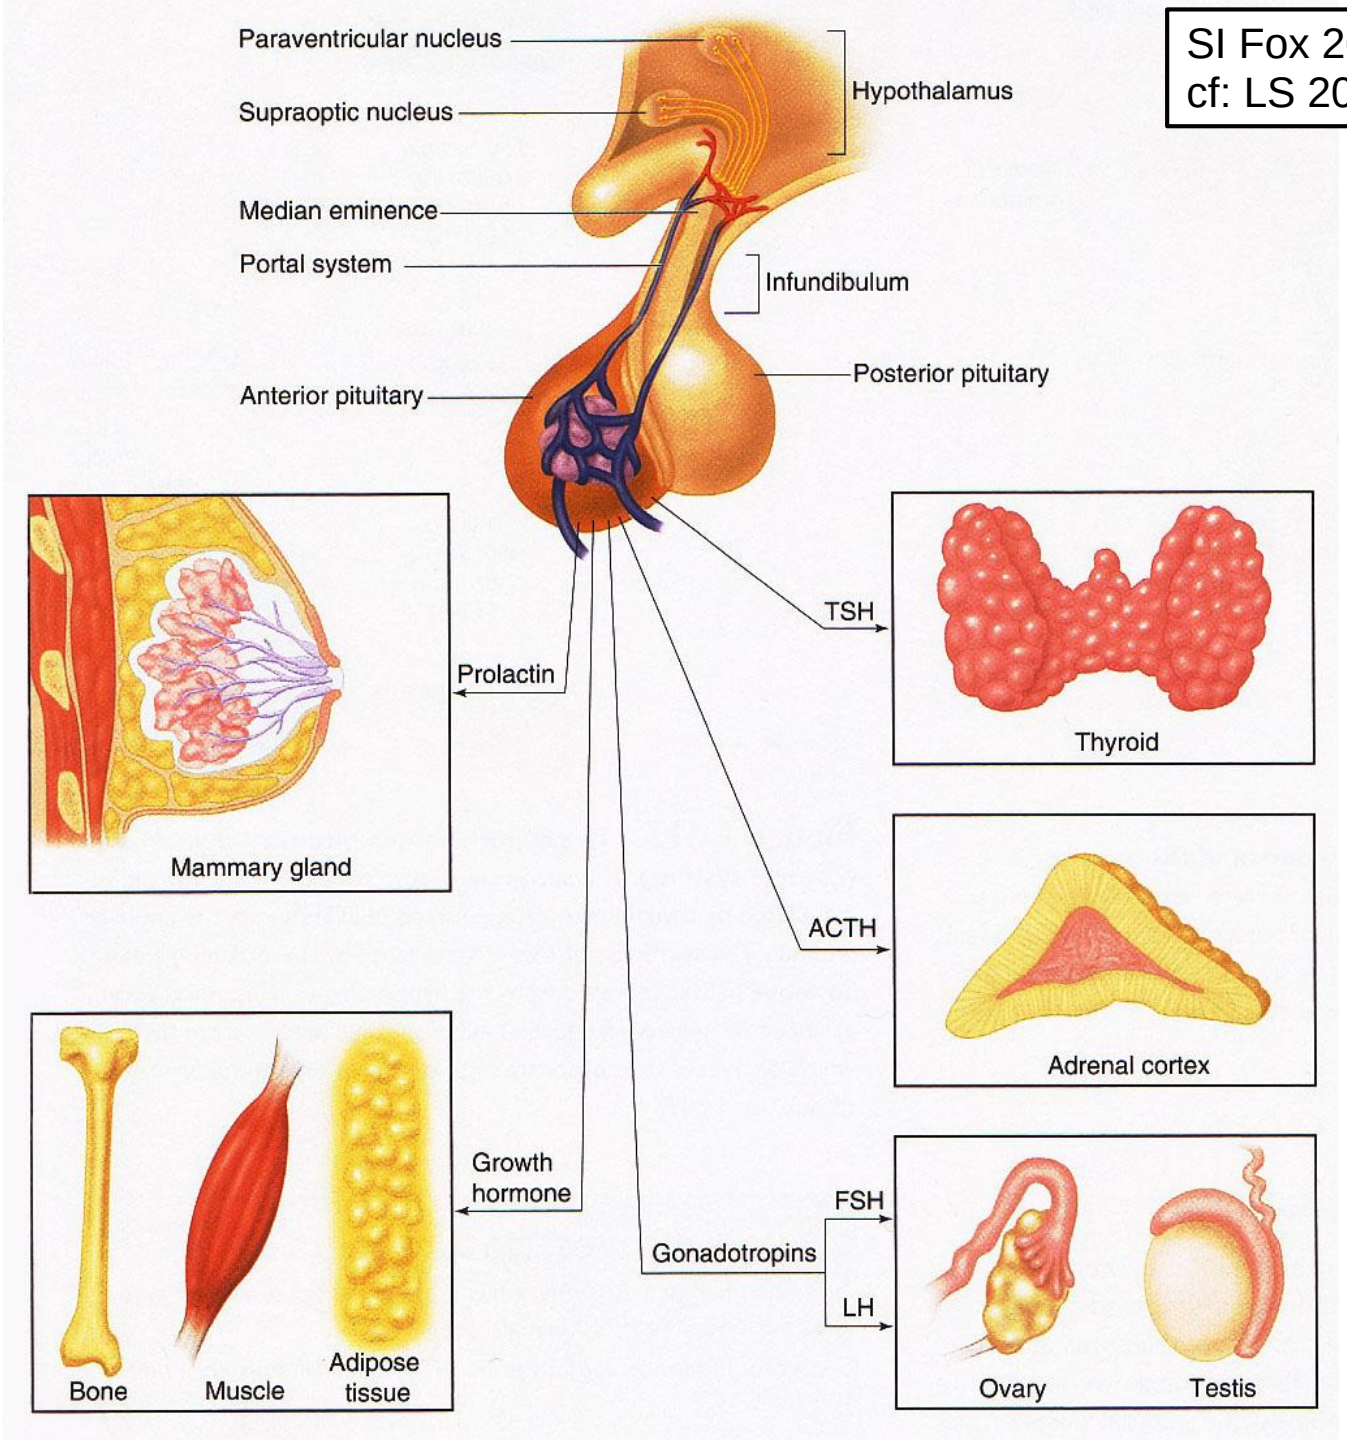
III. ***Introduction to the Nervous System*** LS ch 5, DC Module 9

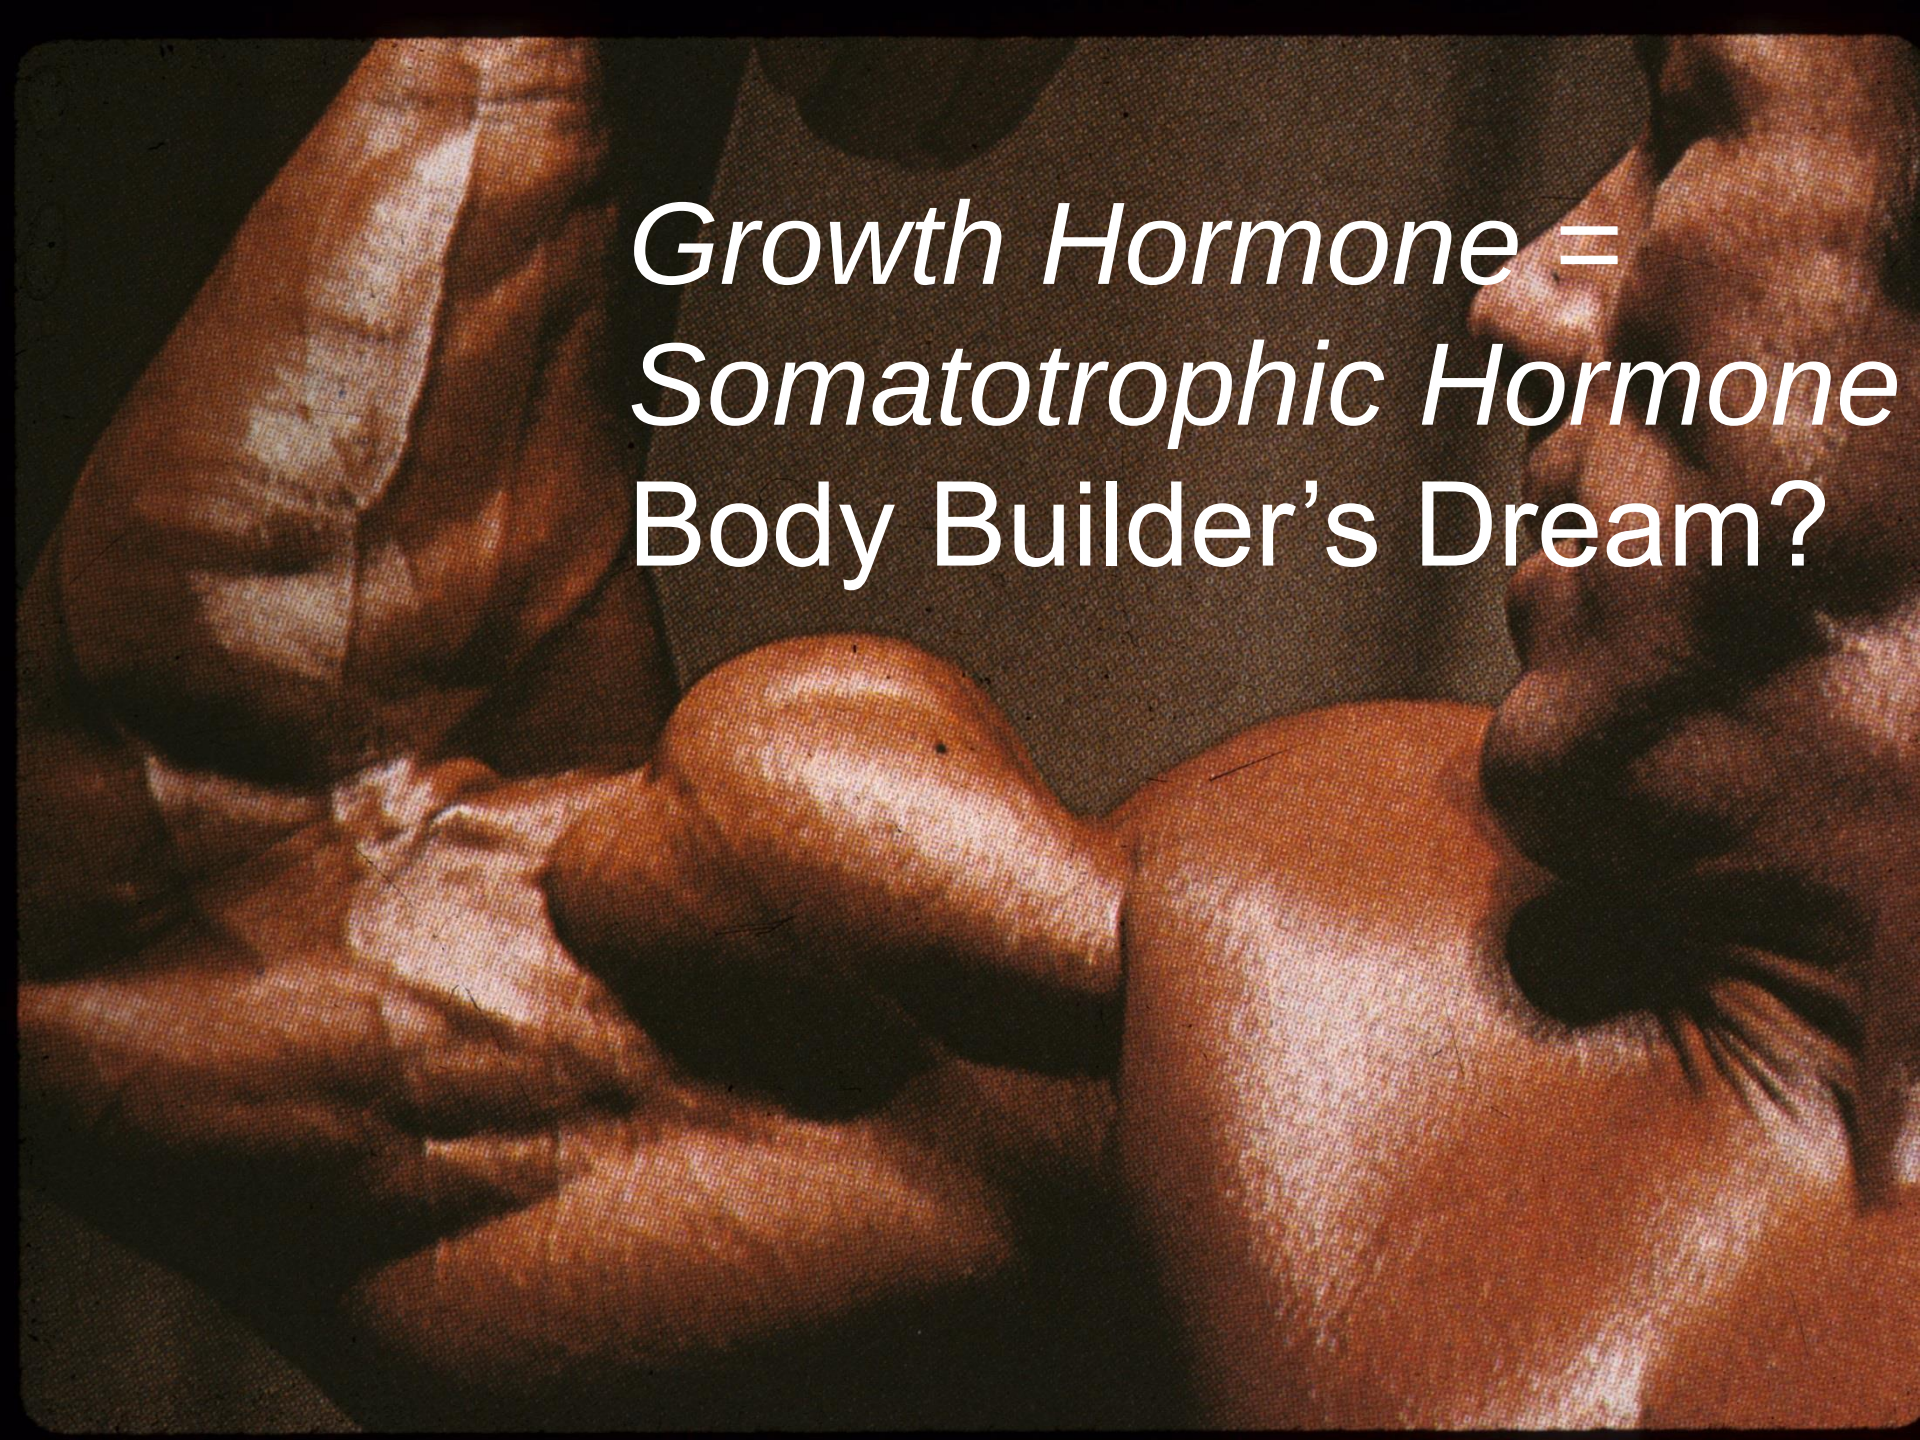
A. **How is the nervous system organized?** LS fig 5-1 DC p 67
B. **Neurons? What kind? Classes? Velocity?** LS fig 5-2, 5-4
C. **What's myelin? How does it help?** DC fig 9-3, LS pp 83-5
D. **Brain structure & function** DC fig 9-6 thru 9-10 pp 71-5 +…
E. **Protect your head with a helmet! Bicycle head injury statistics, *NHTSA* & *BHSI* from 2013 & 2014**

IV. ***Autonomic Nervous System*** LS ch 7 pp 178-85+...

A. **Sympathetic *vs* Parasympathetic branches** LS fig 7-3
B. **Neurotransmitters & receptors** LS fig 7-1 & 7-2, tab 7-2
C. **Actions** LS tab 7-1
D. **Fight-or-flight stories!**

SI Fox 2008
cf: LS 2012 fig 17-5





Growth Hormone =
Somatotrophic Hormone
Body Builder's Dream?

GH/STH Effects: Insulin Resistance/Type II Diabetes?

↑ Amino Acid uptake & Protein synthesis

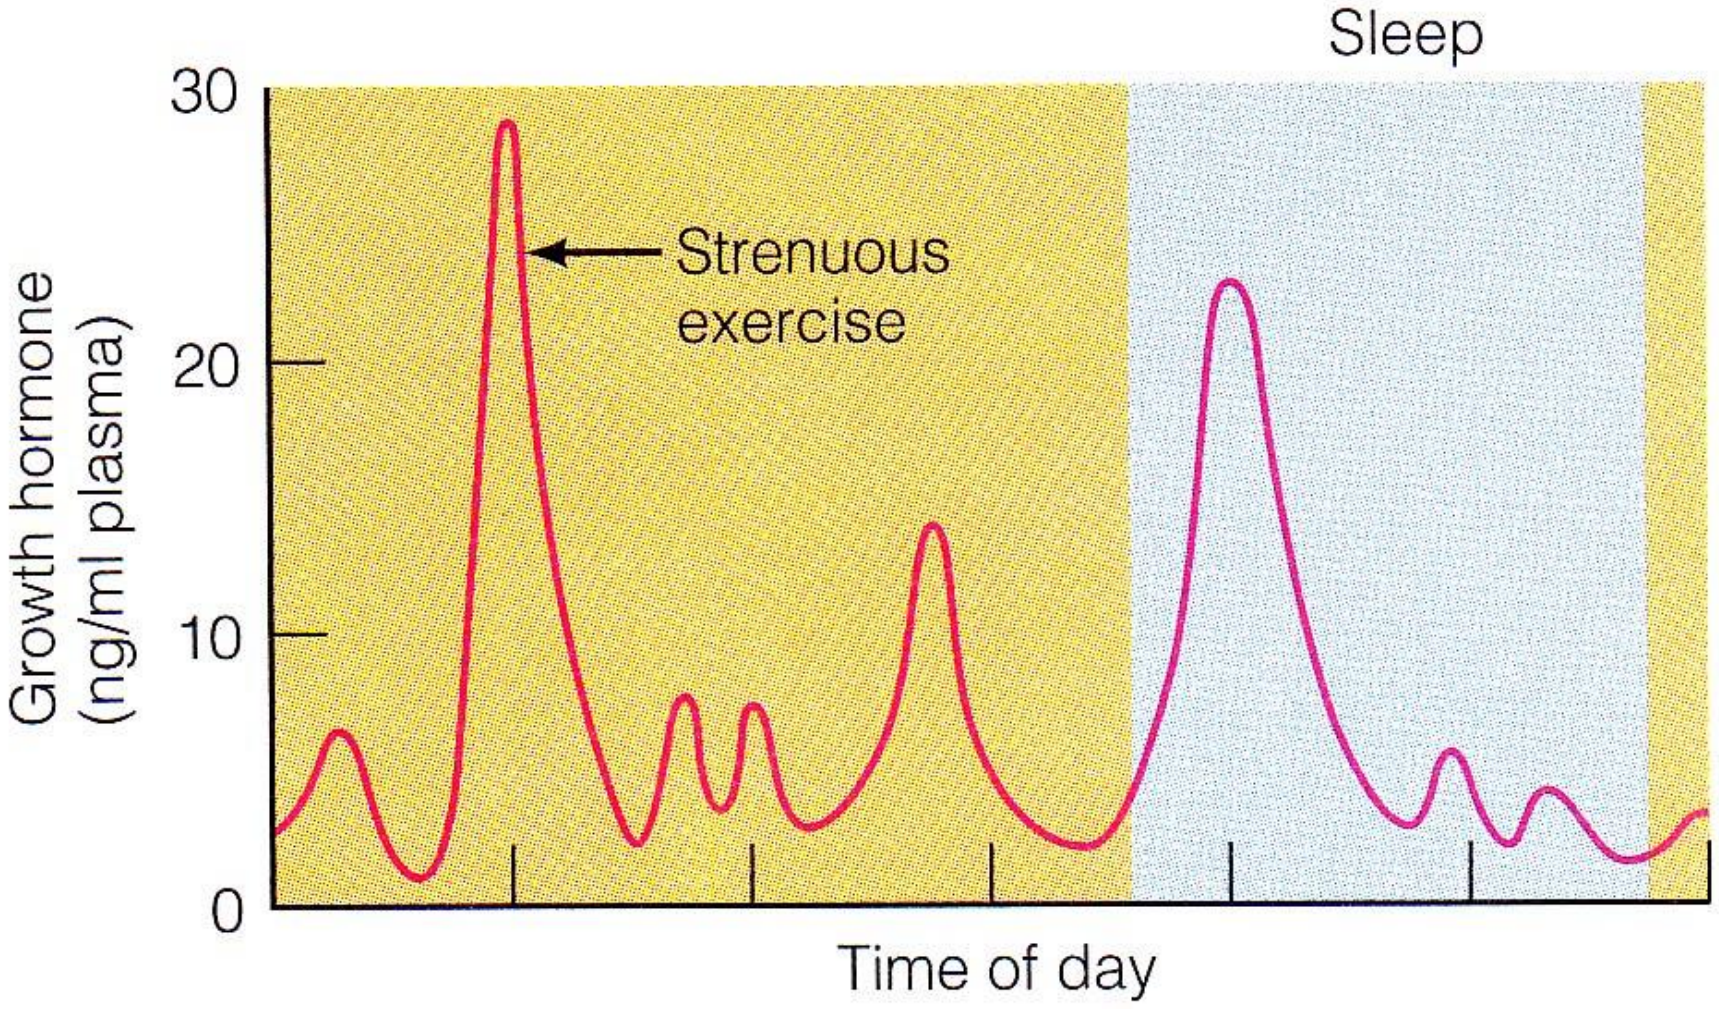
↑ Lipolysis & Fatty Acid mobilization

↓ Glucose uptake
(skeletal muscle & adipocytes)

↑ Glucose production
(liver glycogenolysis)

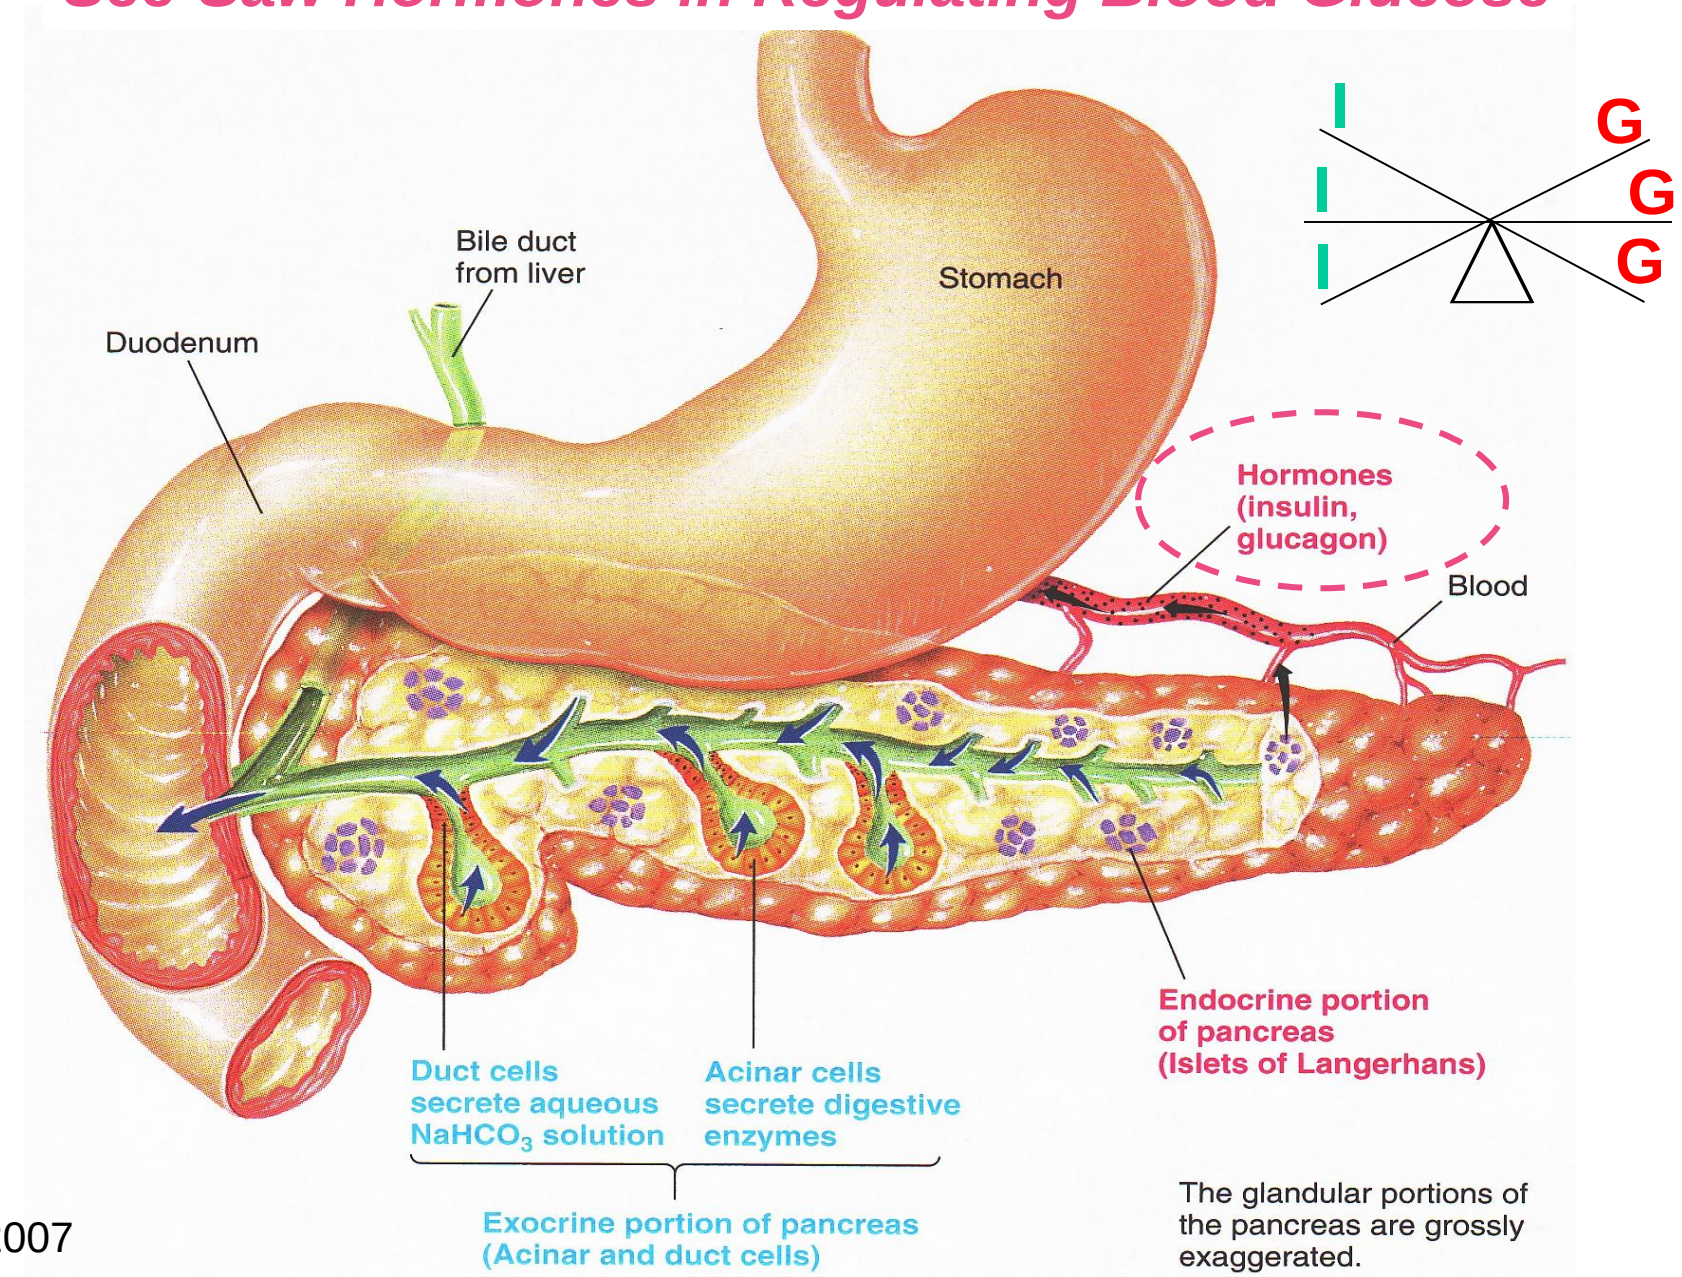
↑ Insulin secretion

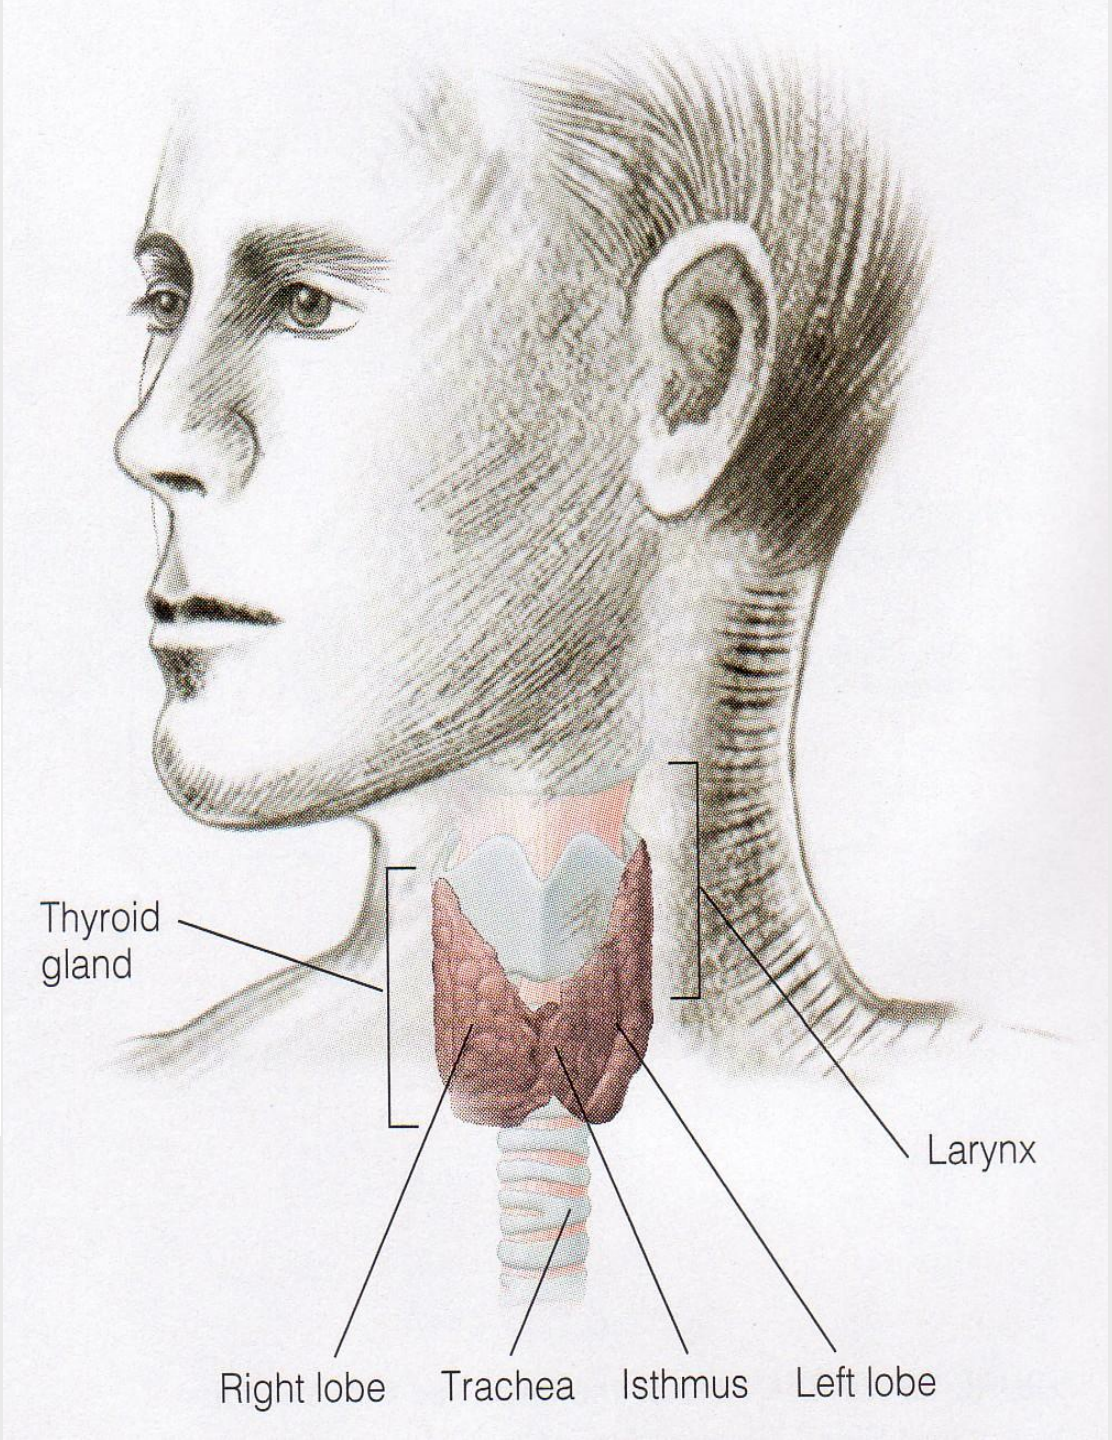
Increase GH naturally with exercise & sleep!!



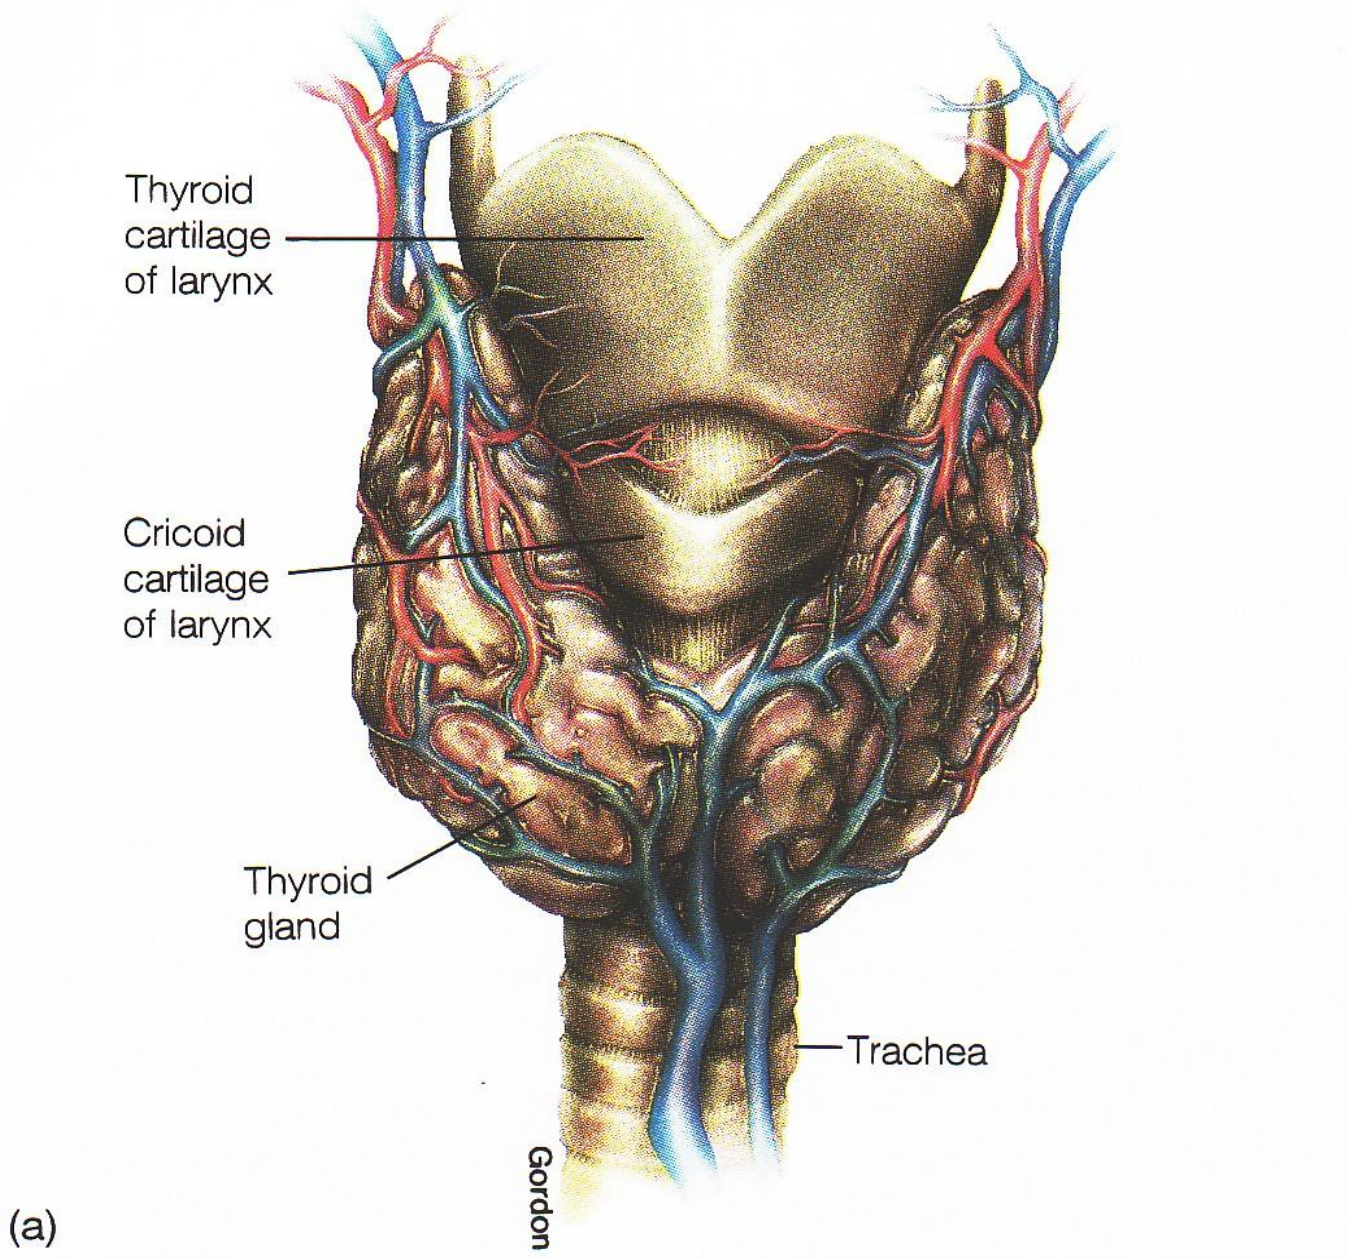
ng/ml = nanograms per mililiter

Endocrine Pancreas: Insulin (I) & Glucagon (G) See-Saw Hormones in Regulating Blood Glucose





DC 2003



Thyroid cartilage of larynx
Cricoid cartilage of larynx
Thyroid gland
Trachea
Gordon
(a)

DC 2003

LS 2012 fig 17-16

LS 2012 fig 17-17

Guyton & Hall 2000

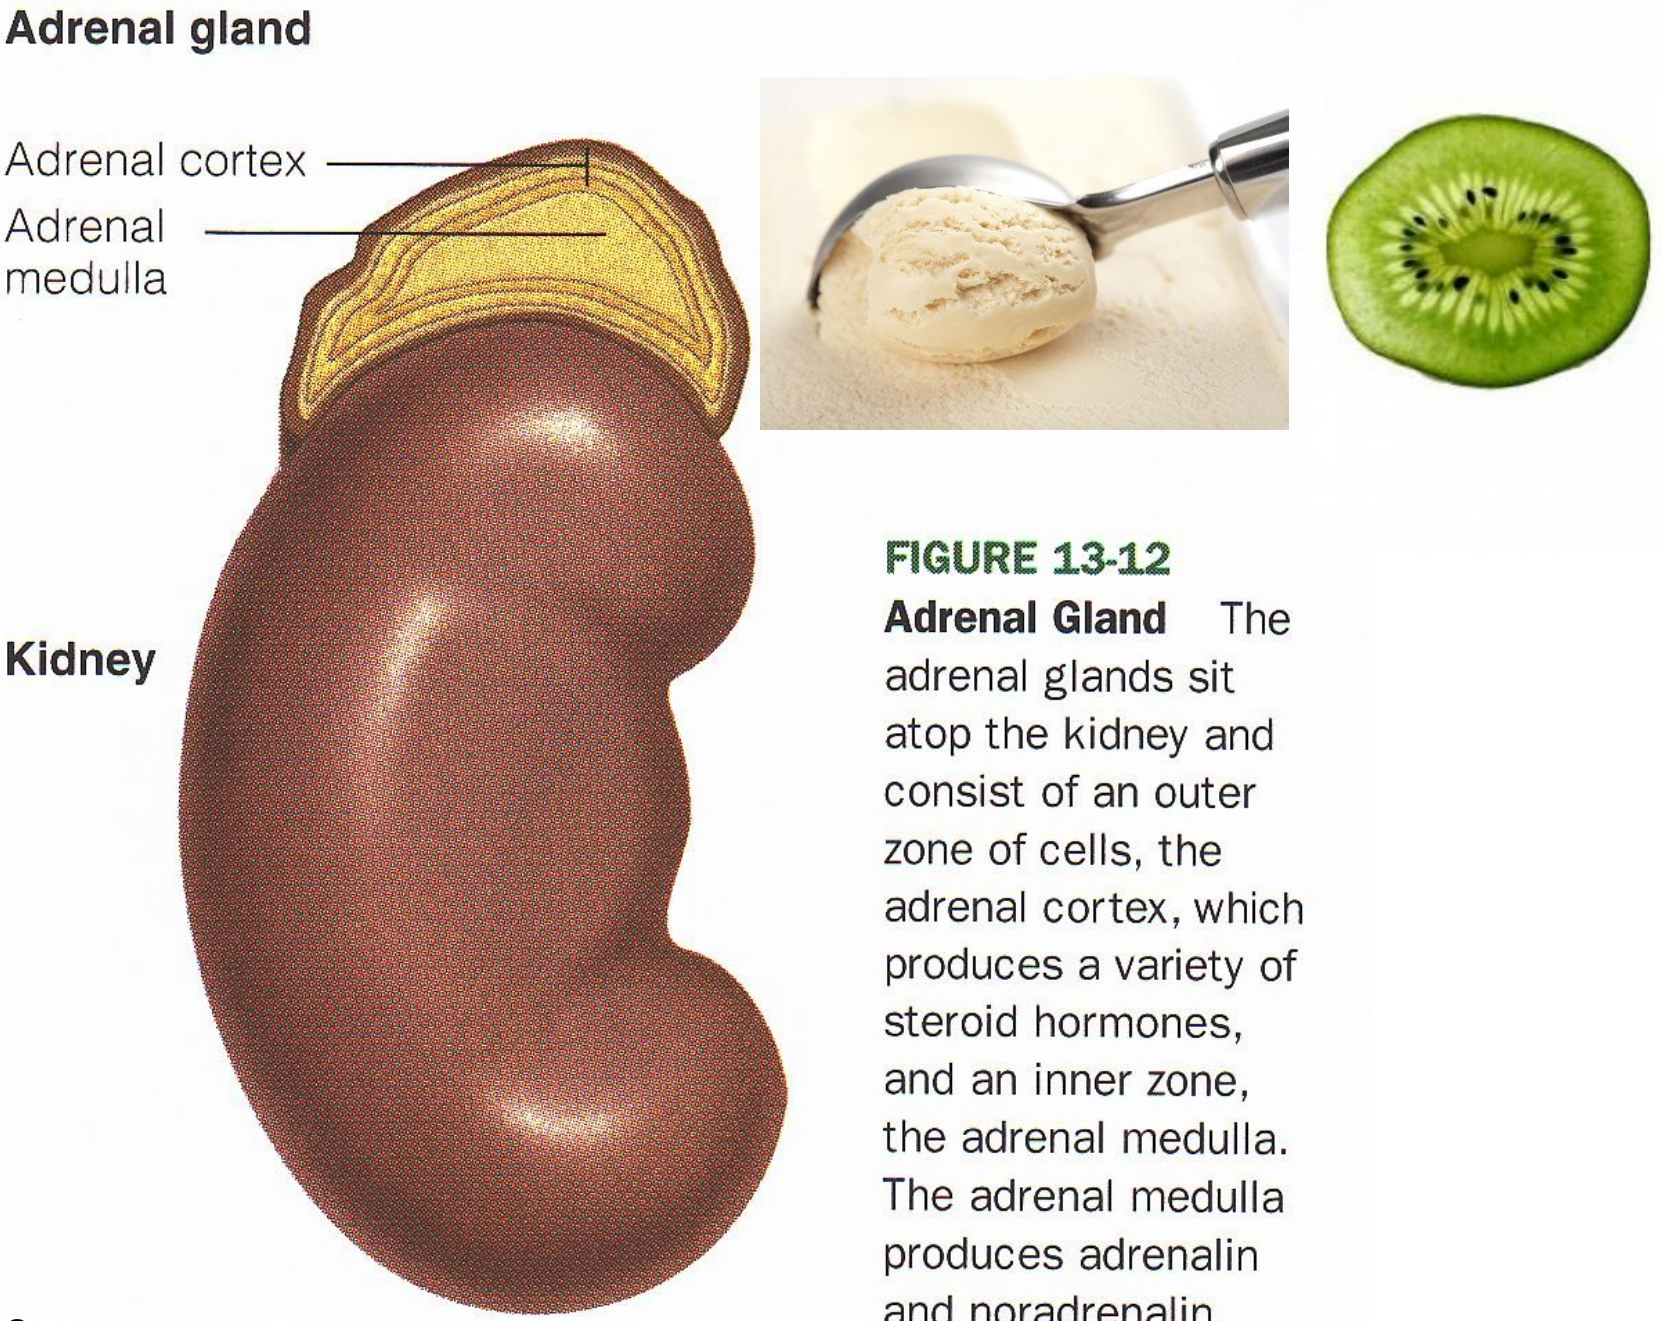

FIGURE 13-12
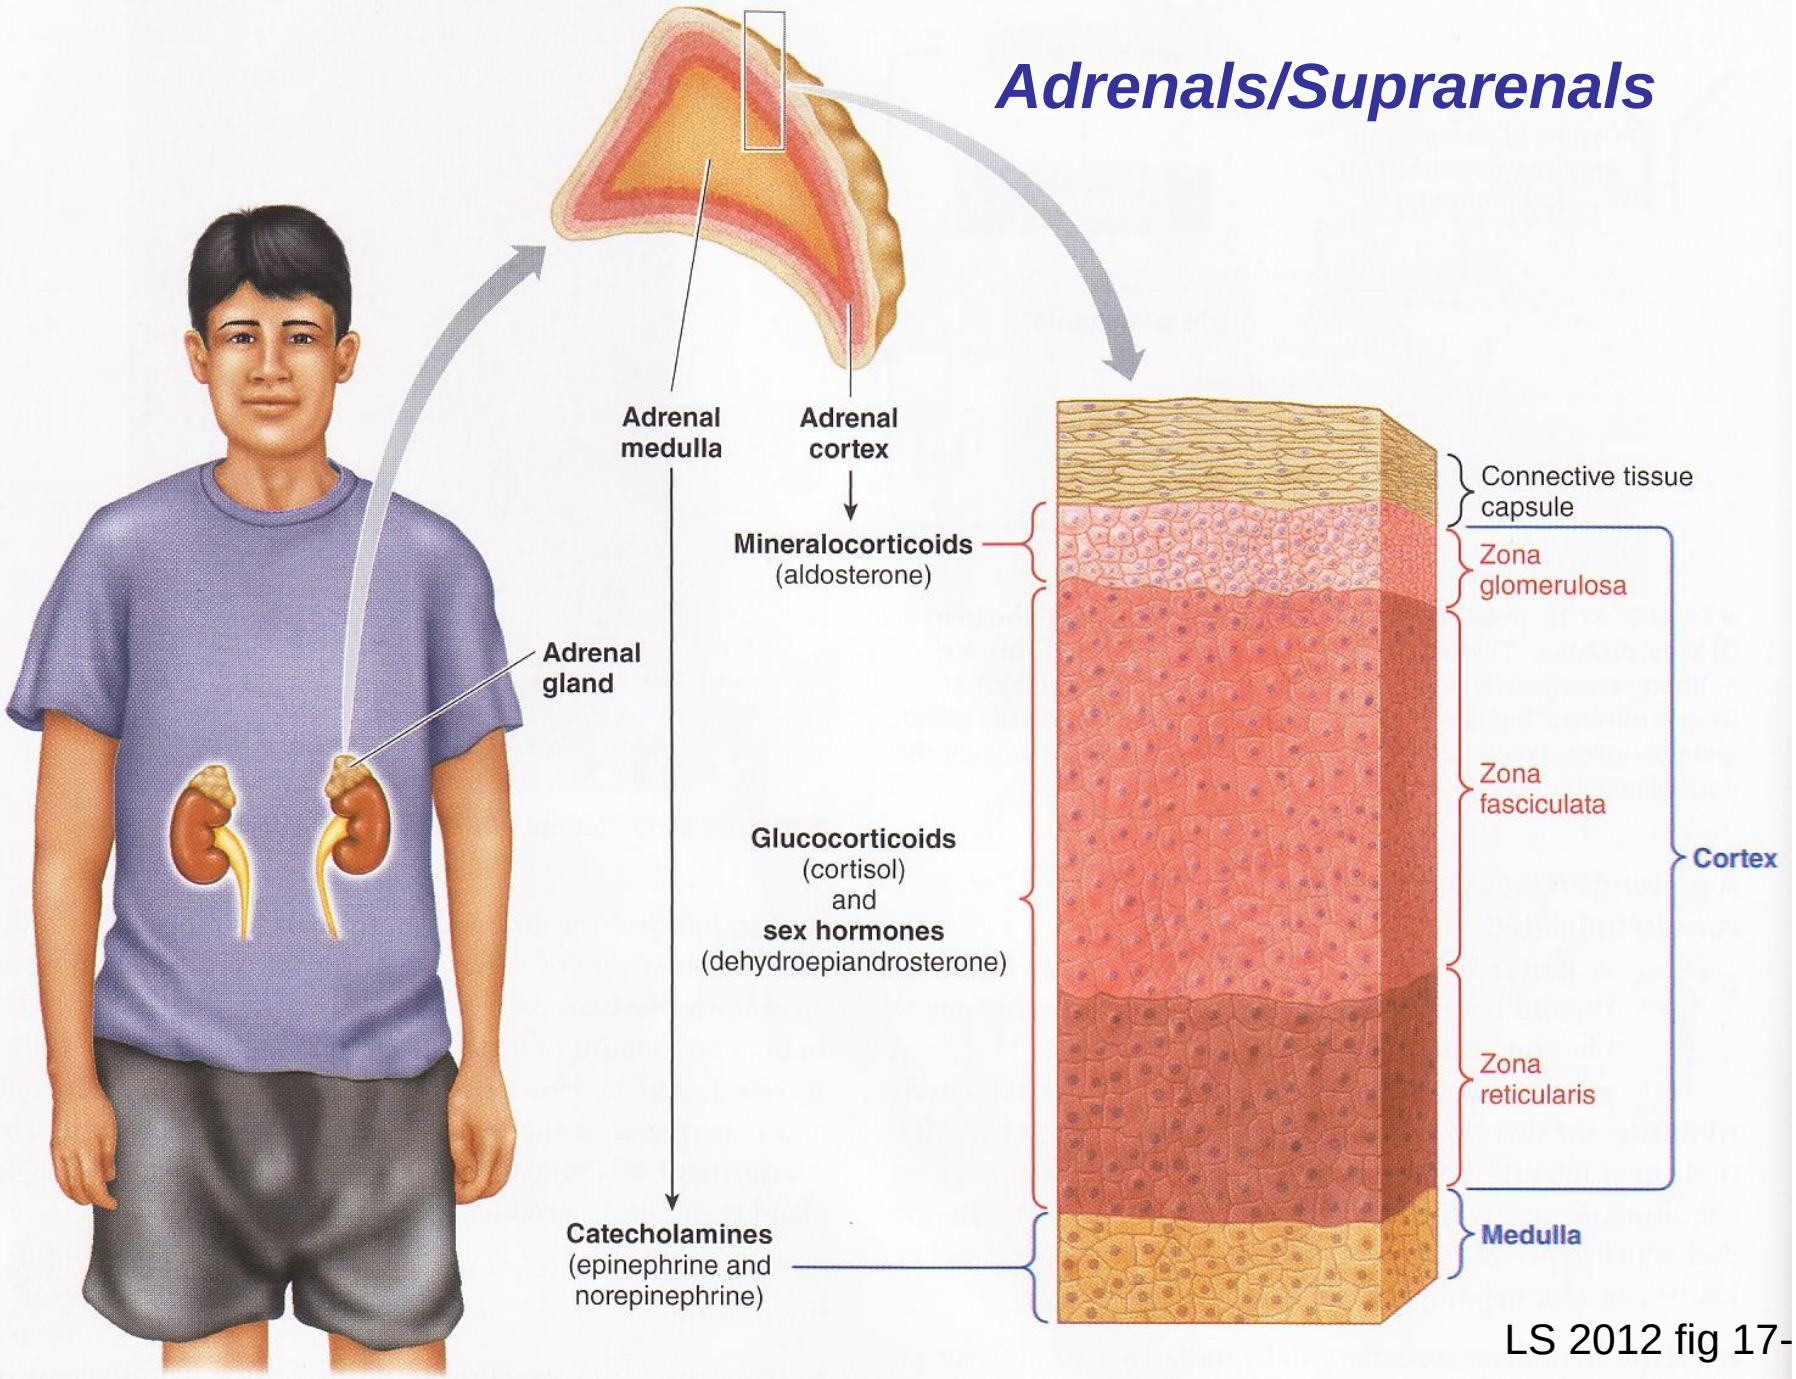
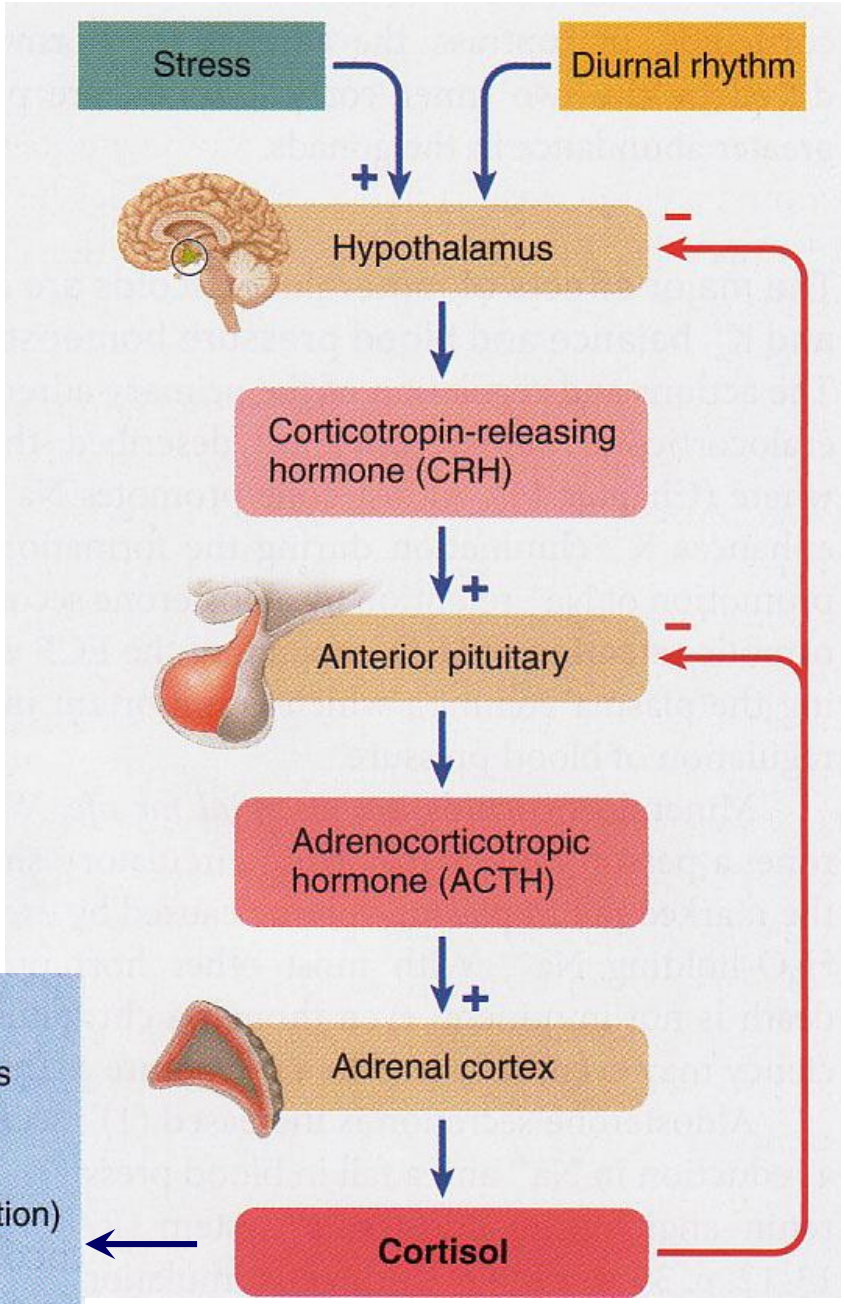
Adrenal Gland The adrenal glands sit atop the kidney and consist of an outer zone of cells, the adrenal cortex, which produces a variety of steroid hormones, and an inner zone, the adrenal medulla. The adrenal medulla produces adrenalin and noradrenalin.

Adrenals/Suprarenals



LS 2012 fig 17-18

Stress Promotes Cortisol Secretion

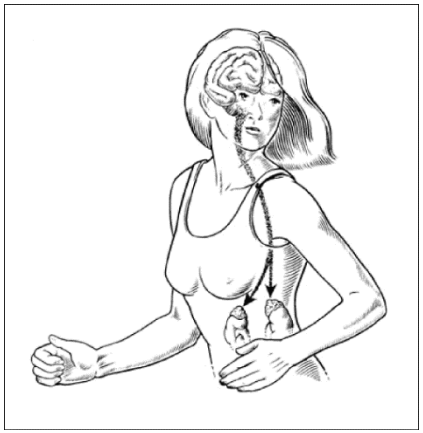


Metabolic fuels and building blocks available to help resist stress

- ↑ Blood glucose (by stimulating gluconeogenesis and inhibiting glucose uptake)
- ↑ Blood amino acids (by stimulating protein degradation)
- ↑ Blood fatty acids (by stimulating lipolysis)

LS 2012 fig 17-19

Epinephrine 80%
Norepinephrine 20%



Guyton & Hall 2000

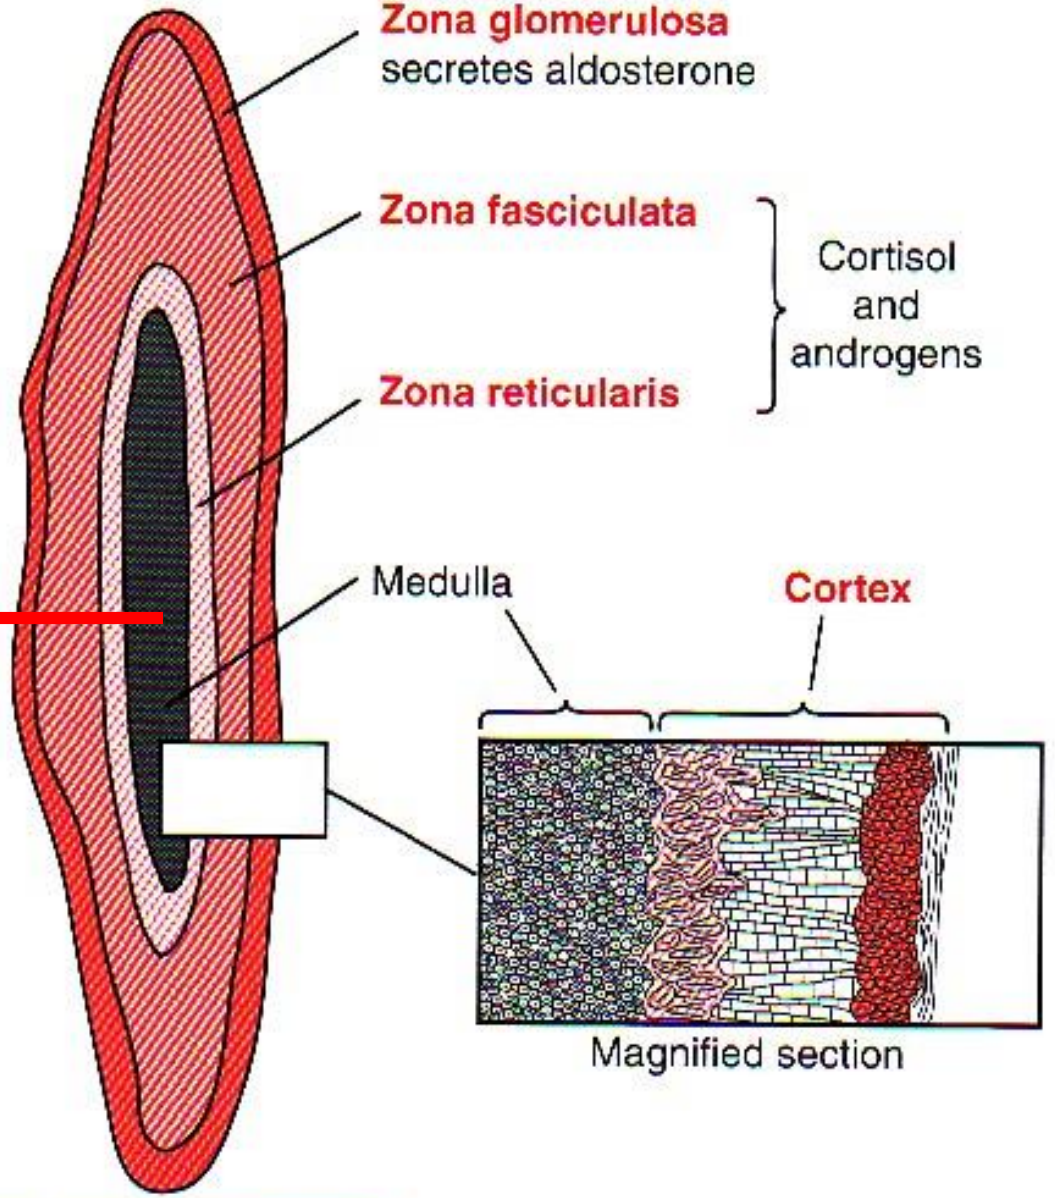


FIGURE 77-1

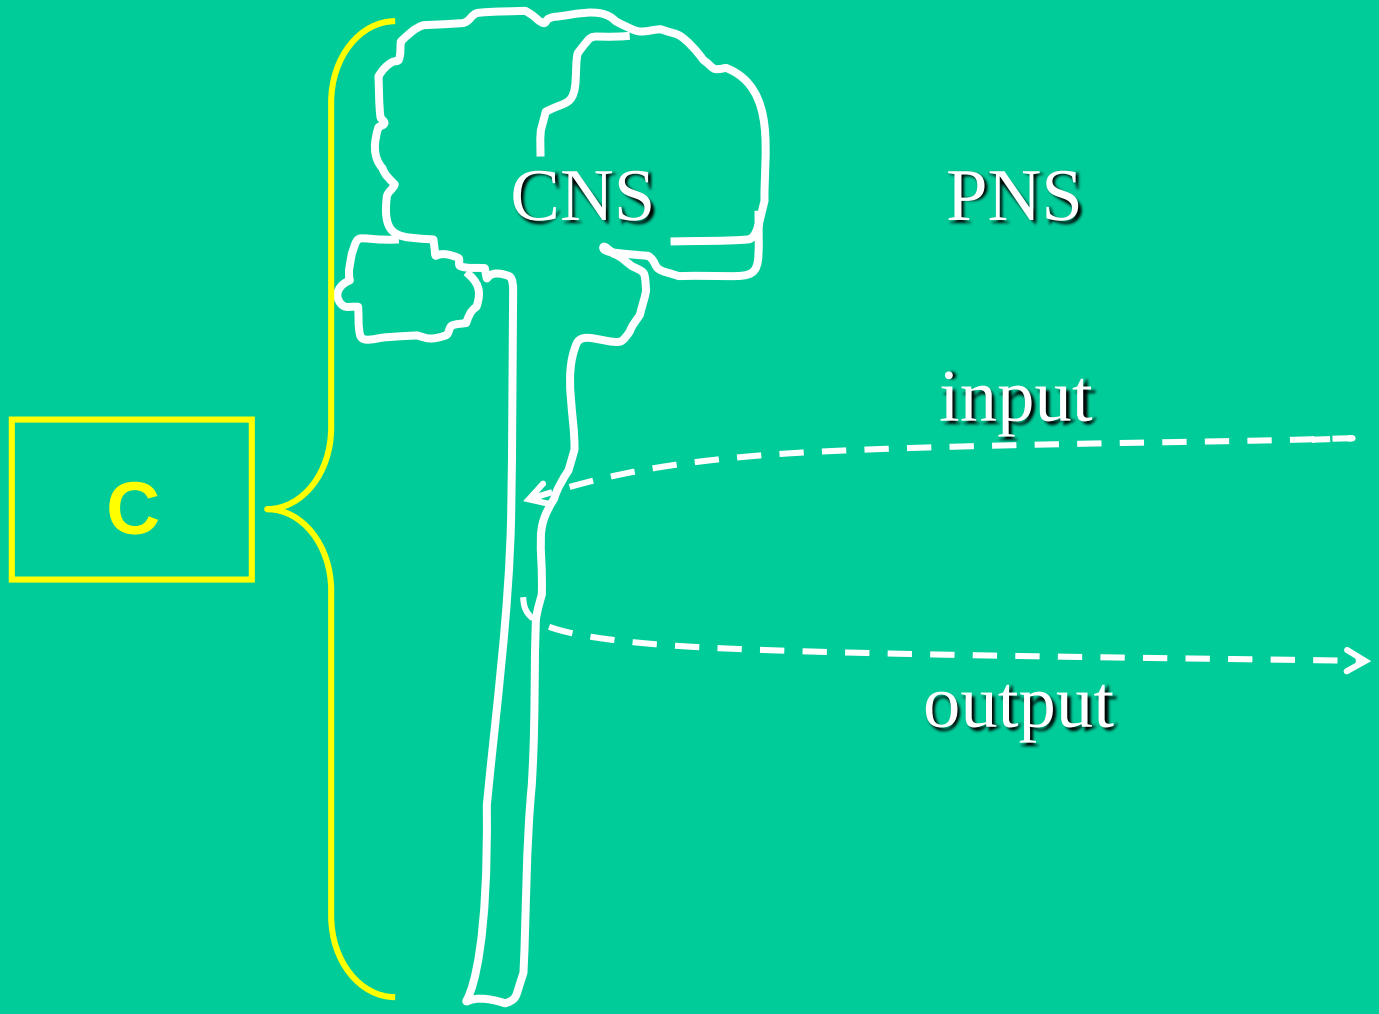
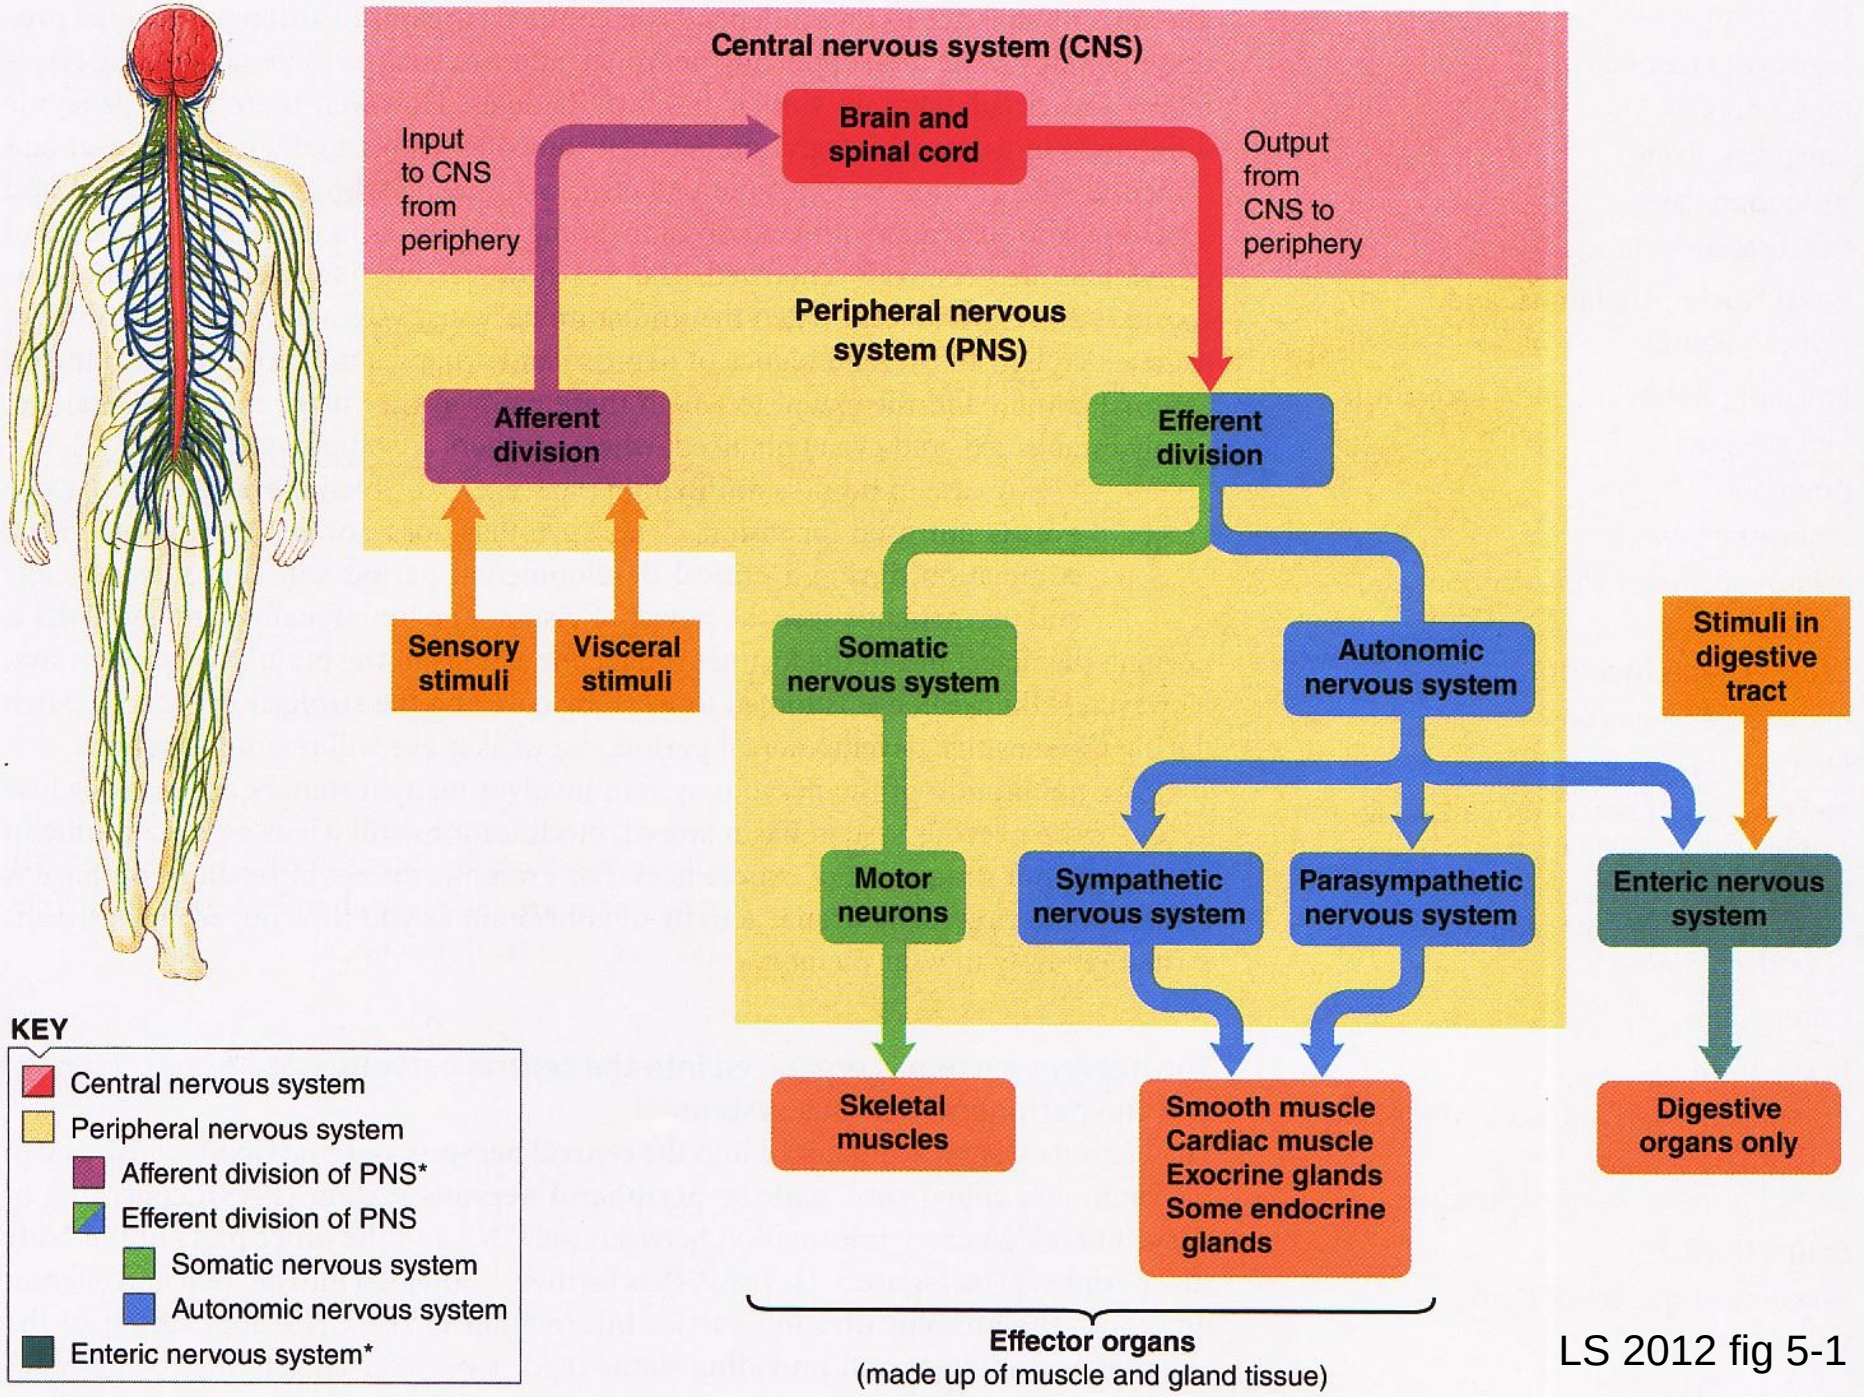
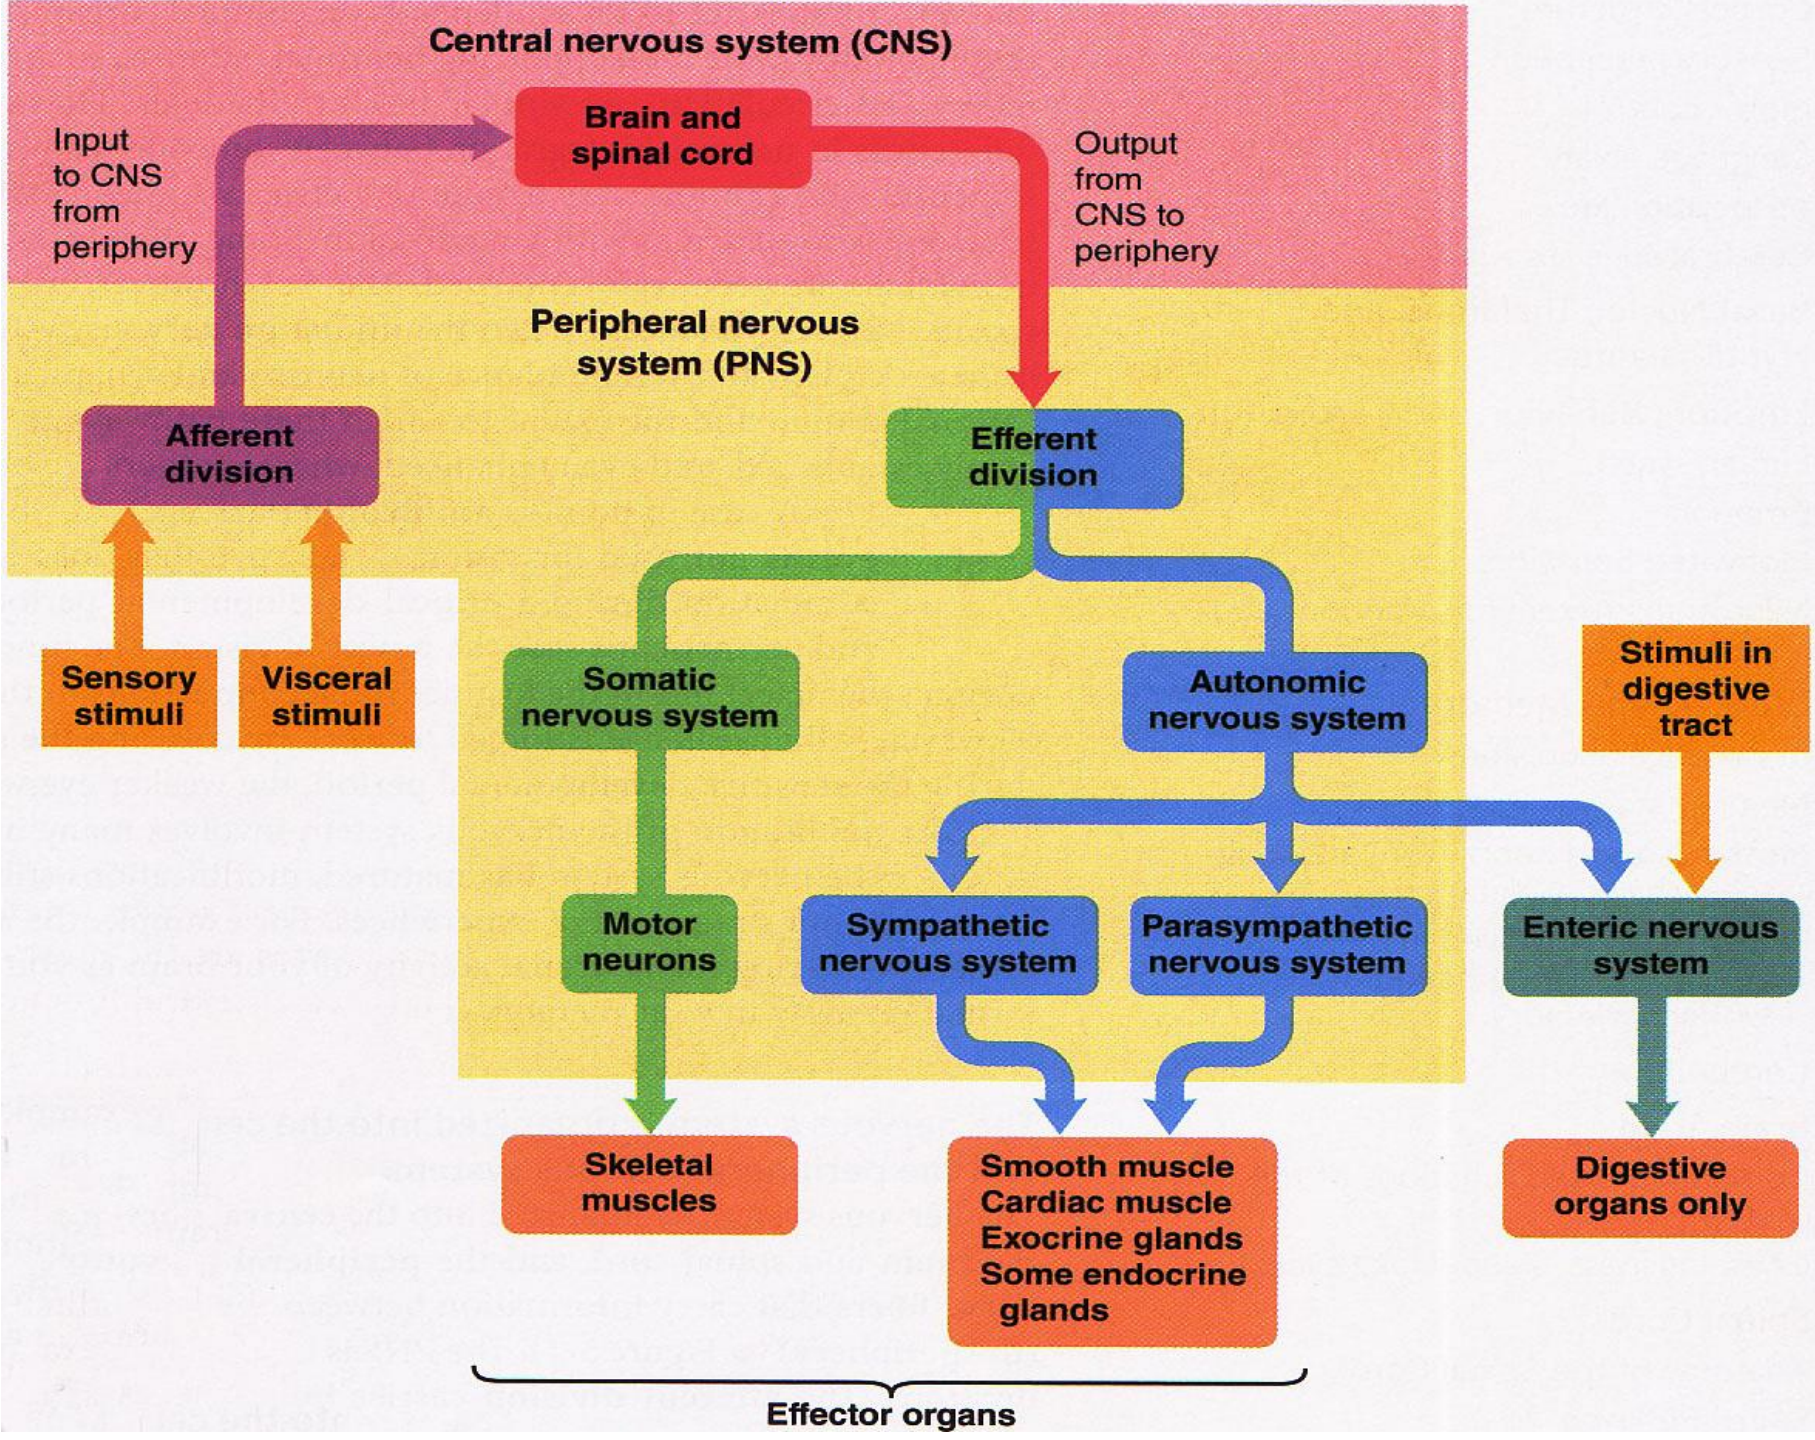
Secretion of adrenocortical hormones by the different zones of the adrenal cortex.

Nervous System

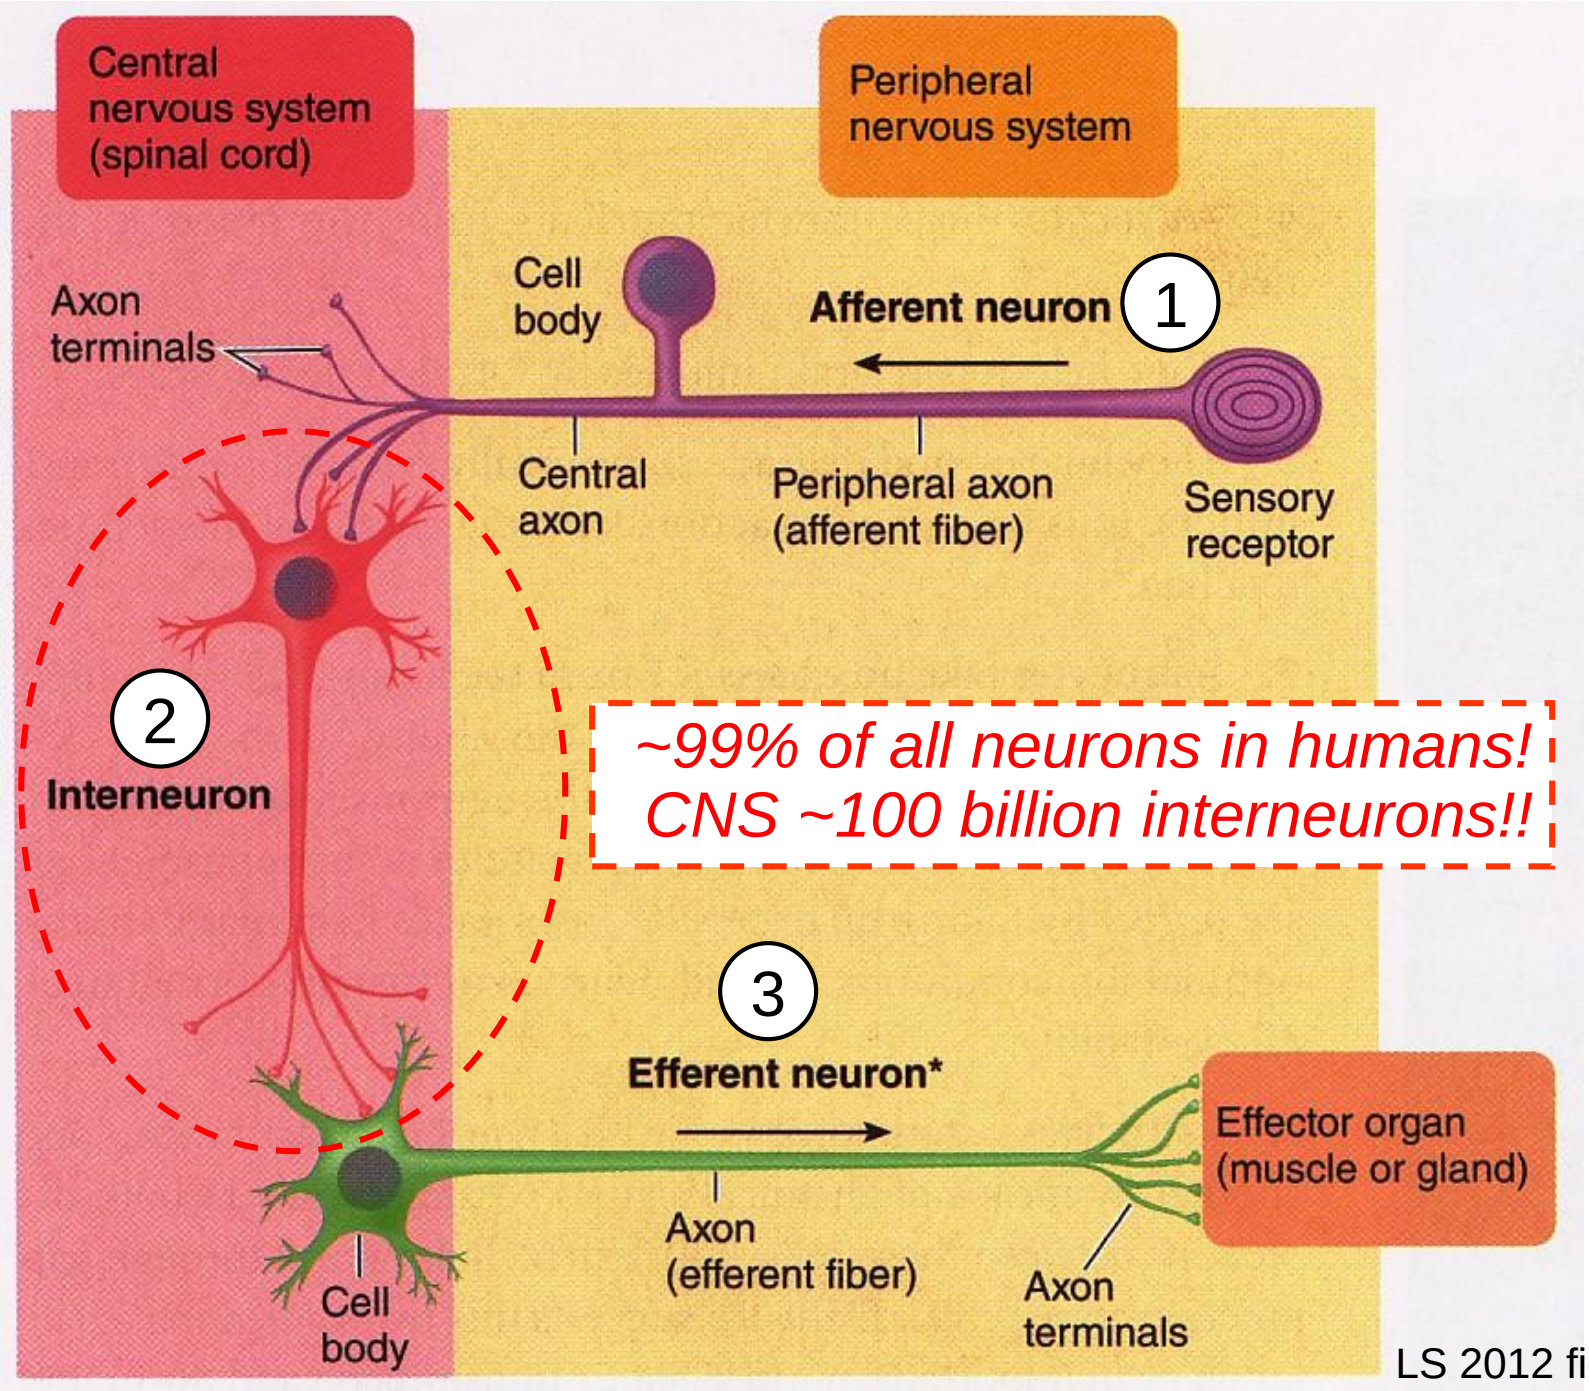




LS 2012 fig 5-1

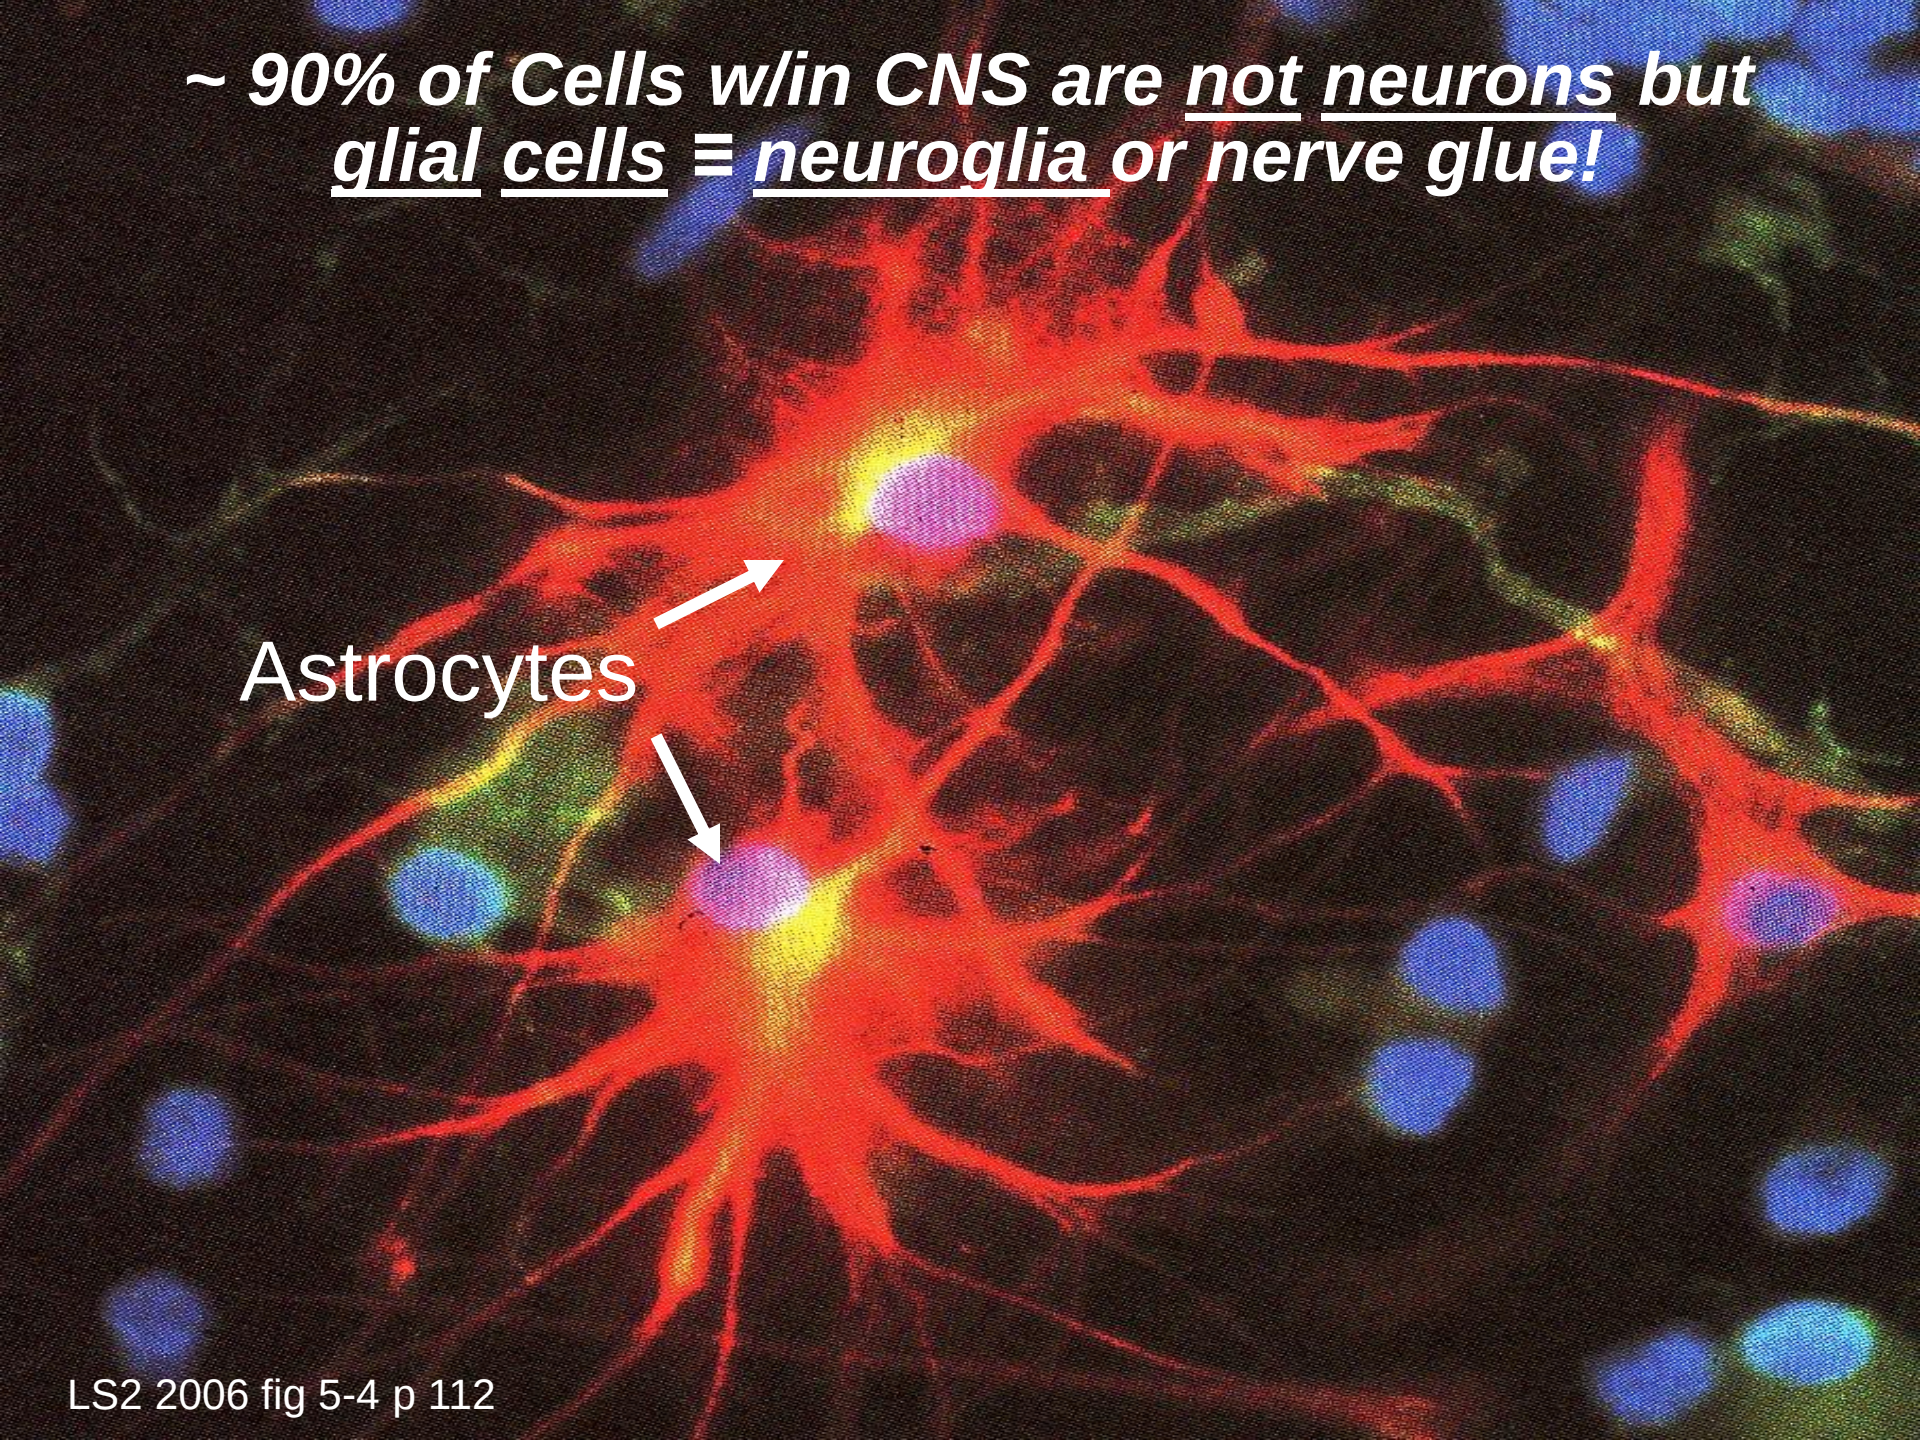


Central nervous system (CNS)
Brain and spinal cord
Input to CNS from periphery
Output from CNS to periphery
Peripheral nervous system (PNS)
Afferent division
Efferent division
Sensory stimuli
Visceral stimuli
Somatic nervous system
Autonomic nervous system
Stimuli in digestive tract
Motor neurons
Sympathetic nervous system
Parasympathetic nervous system
Enteric nervous system
Skeletal muscles
Smooth muscle
Cardiac muscle
Exocrine glands
Some endocrine glands
Digestive organs only
Effector organs

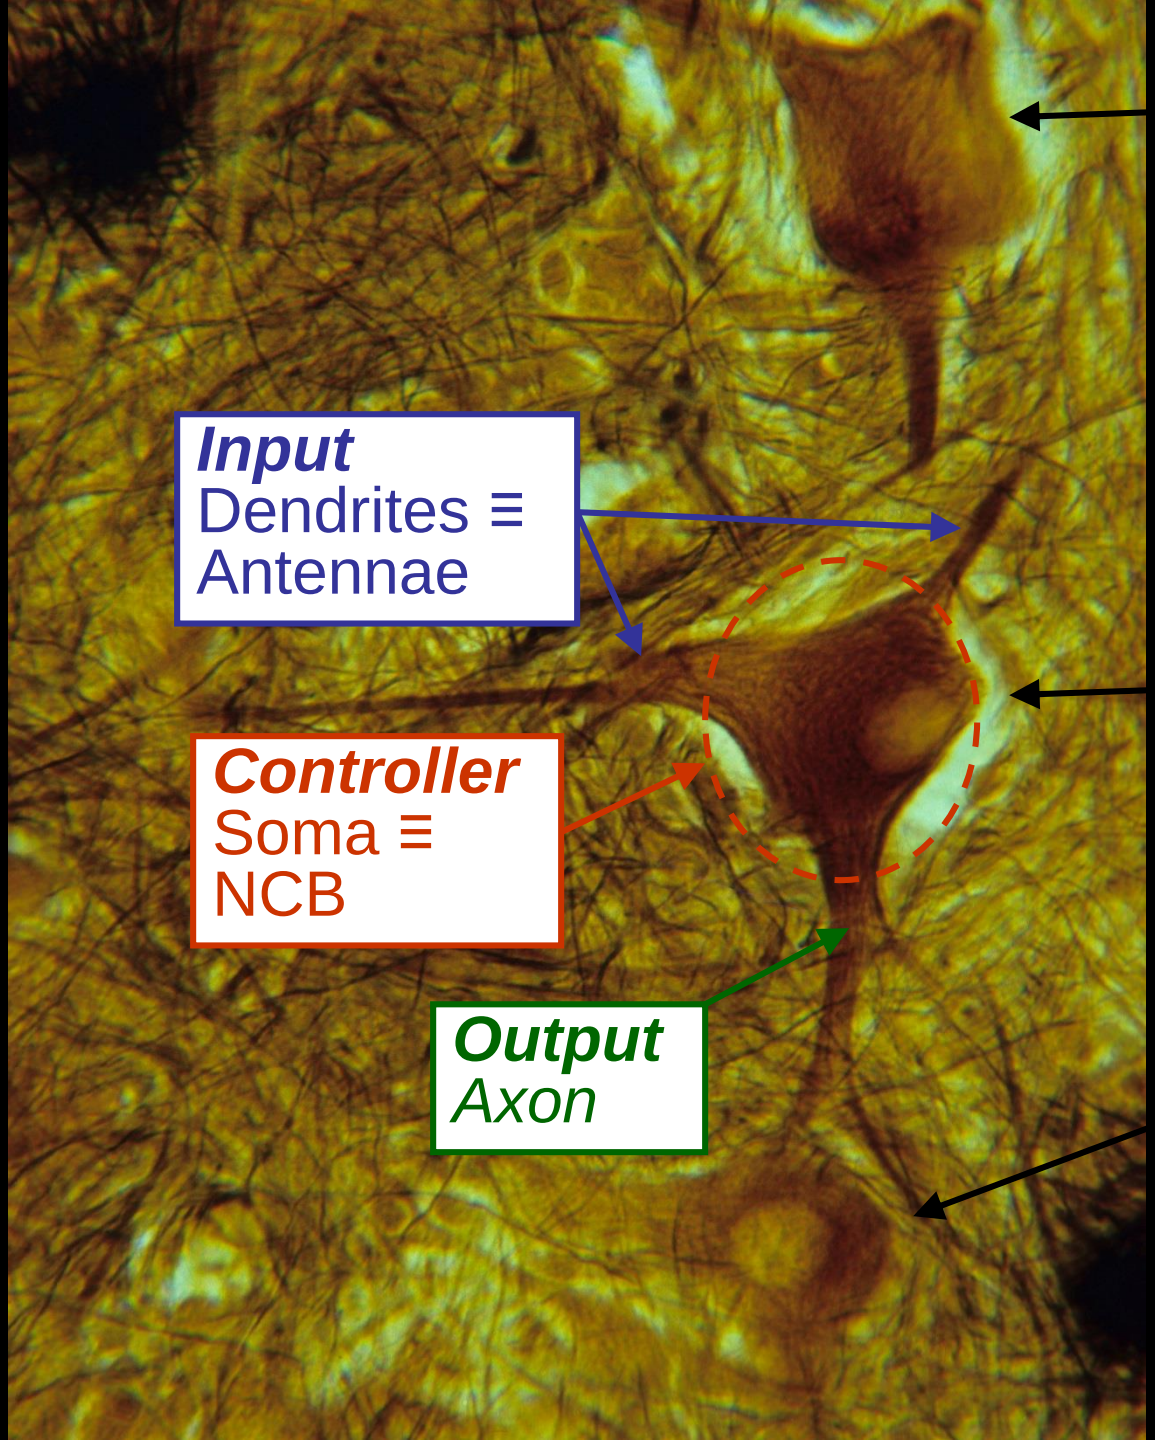


LS 2012 fig 5-2

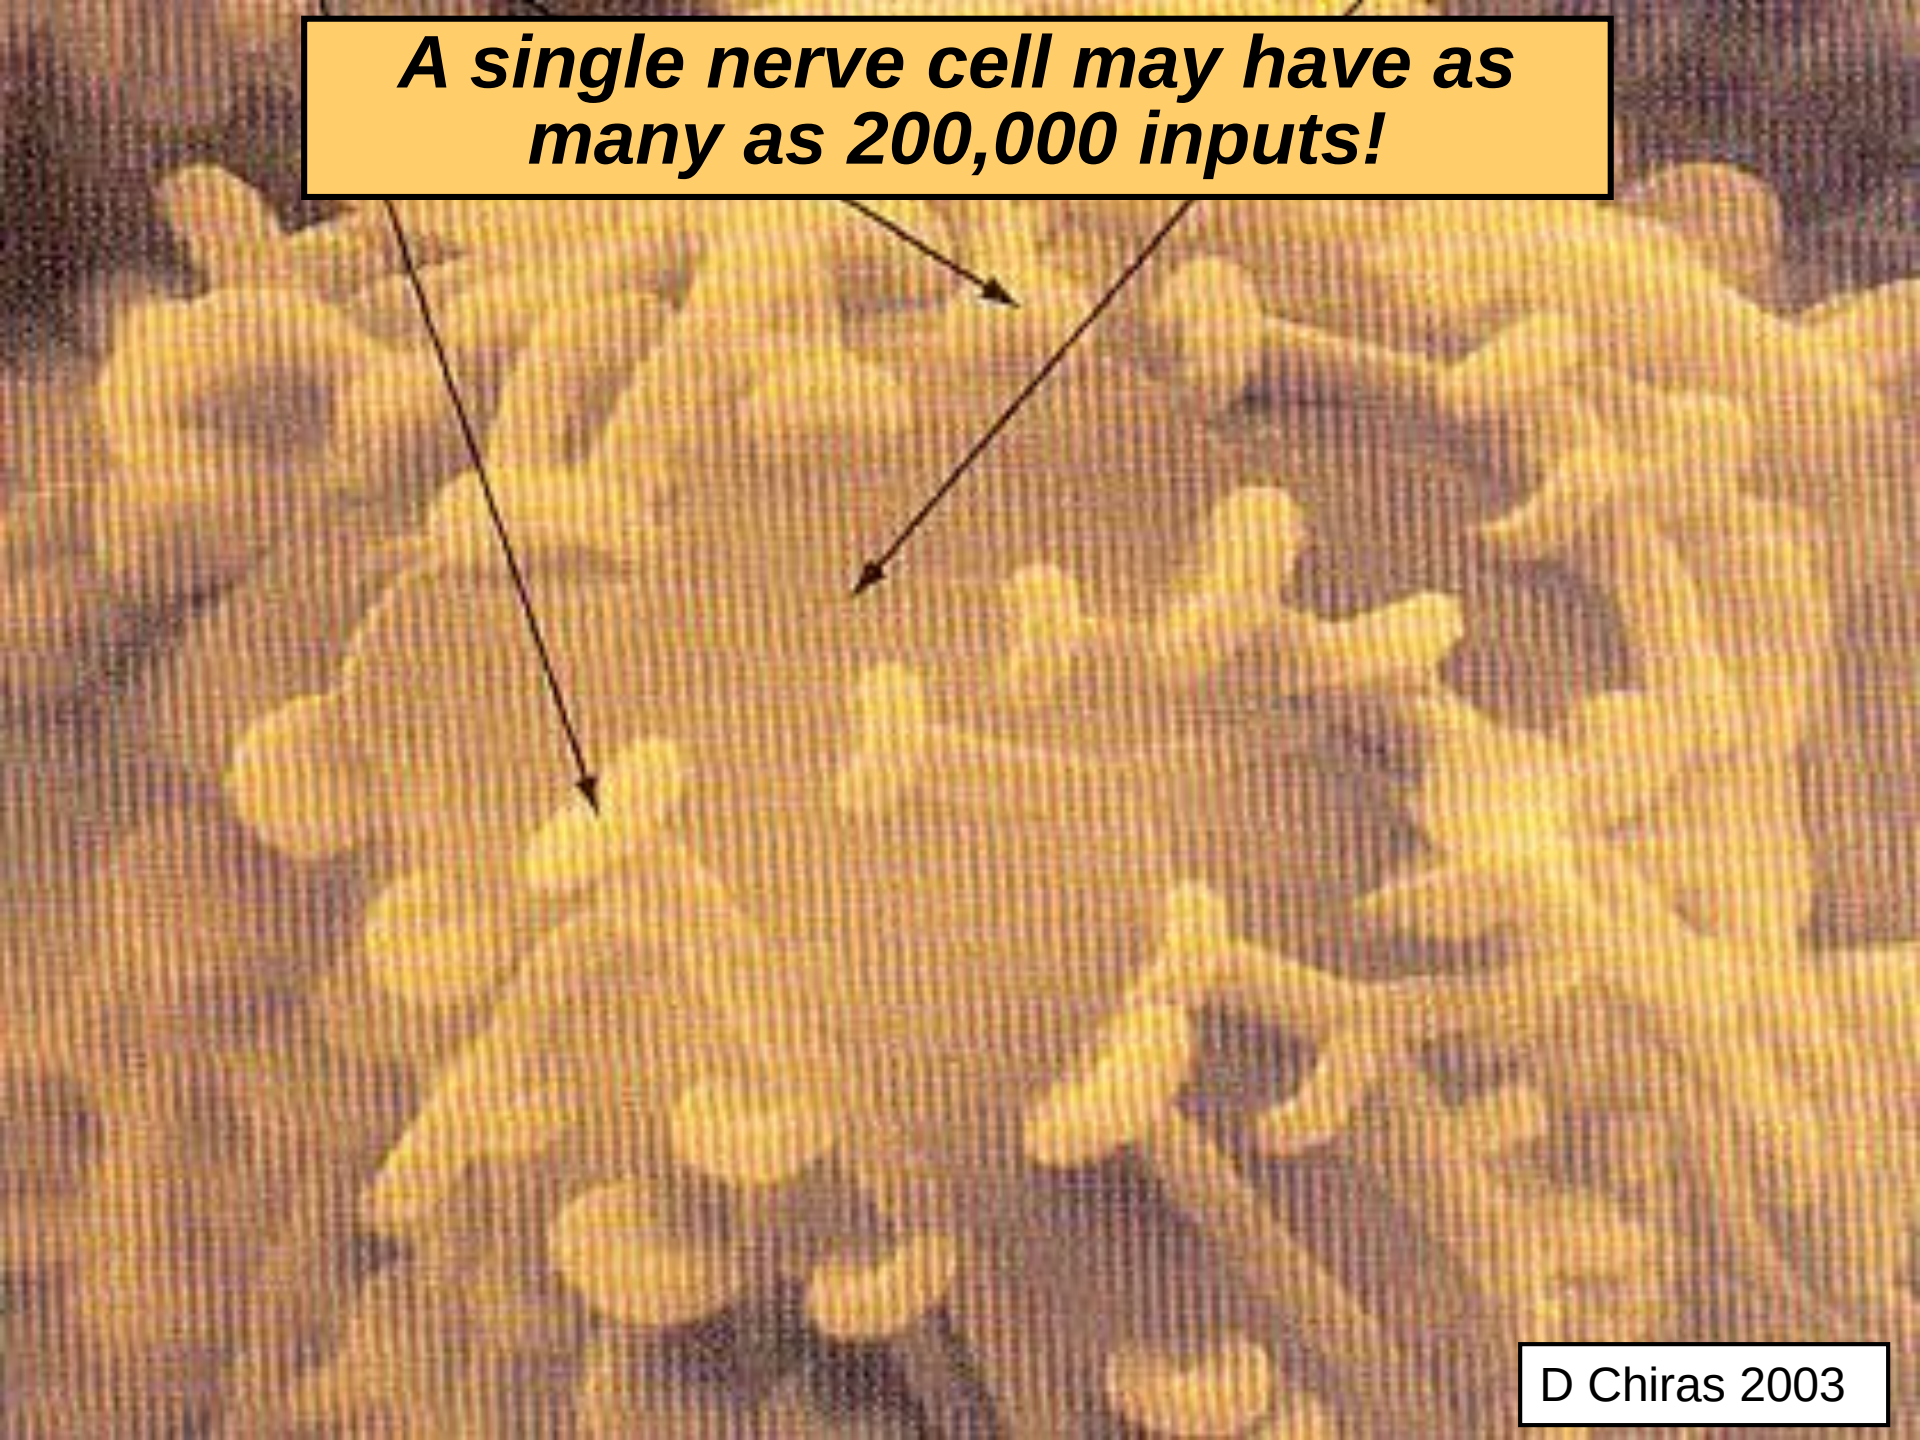
~ 90% of Cells w/in CNS are <u>not</u> <u>neurons</u> but <u>glial</u> <u>cells</u> ≡ <u>neuroglia</u> or nerve glue!



LS2 2006 fig 5-4 p 112

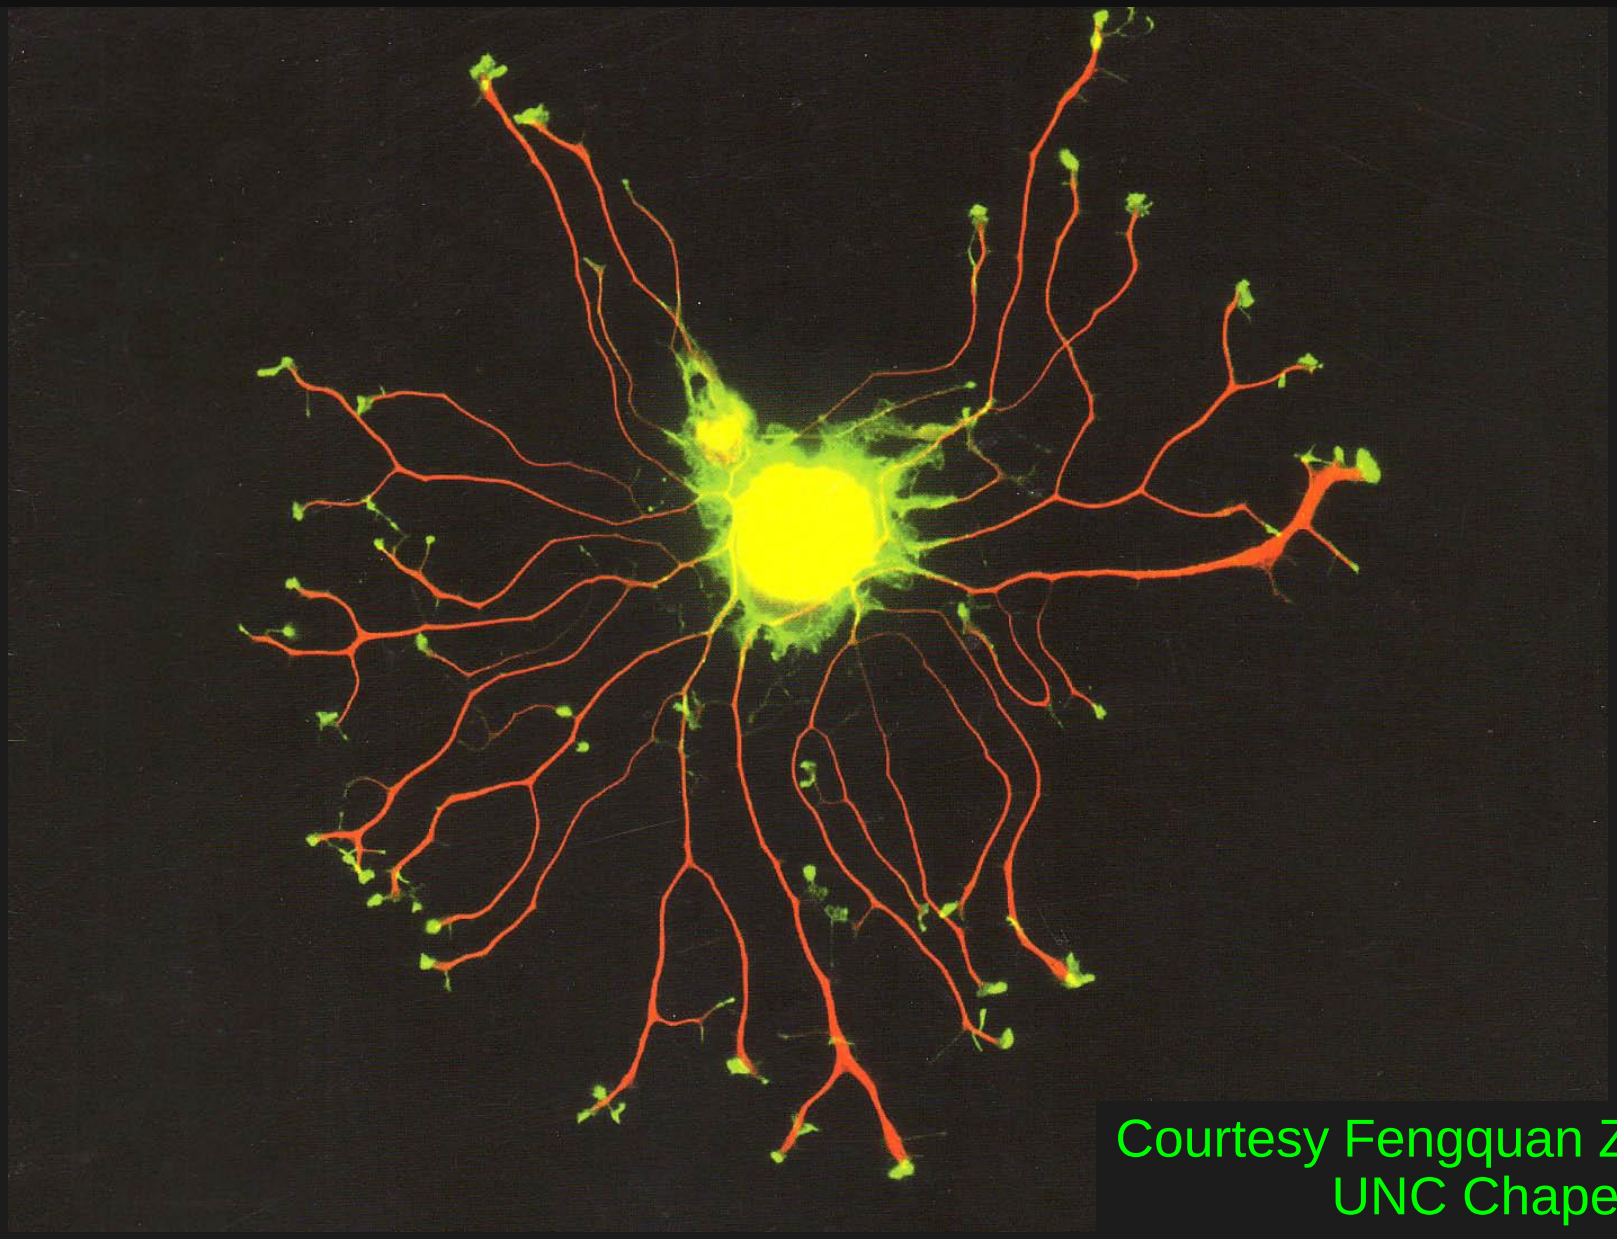


H. Howard 1980



A single nerve cell may have as many as 200,000 inputs!
D Chiras 2003

Nerve cell with multiple axons grown by adding a mitogen/neurogen ≡ nerve growth factor!



Courtesy Fengquan Zhou
UNC Chapel Hill

Sensory nerves especially, come in all shapes & sizes!

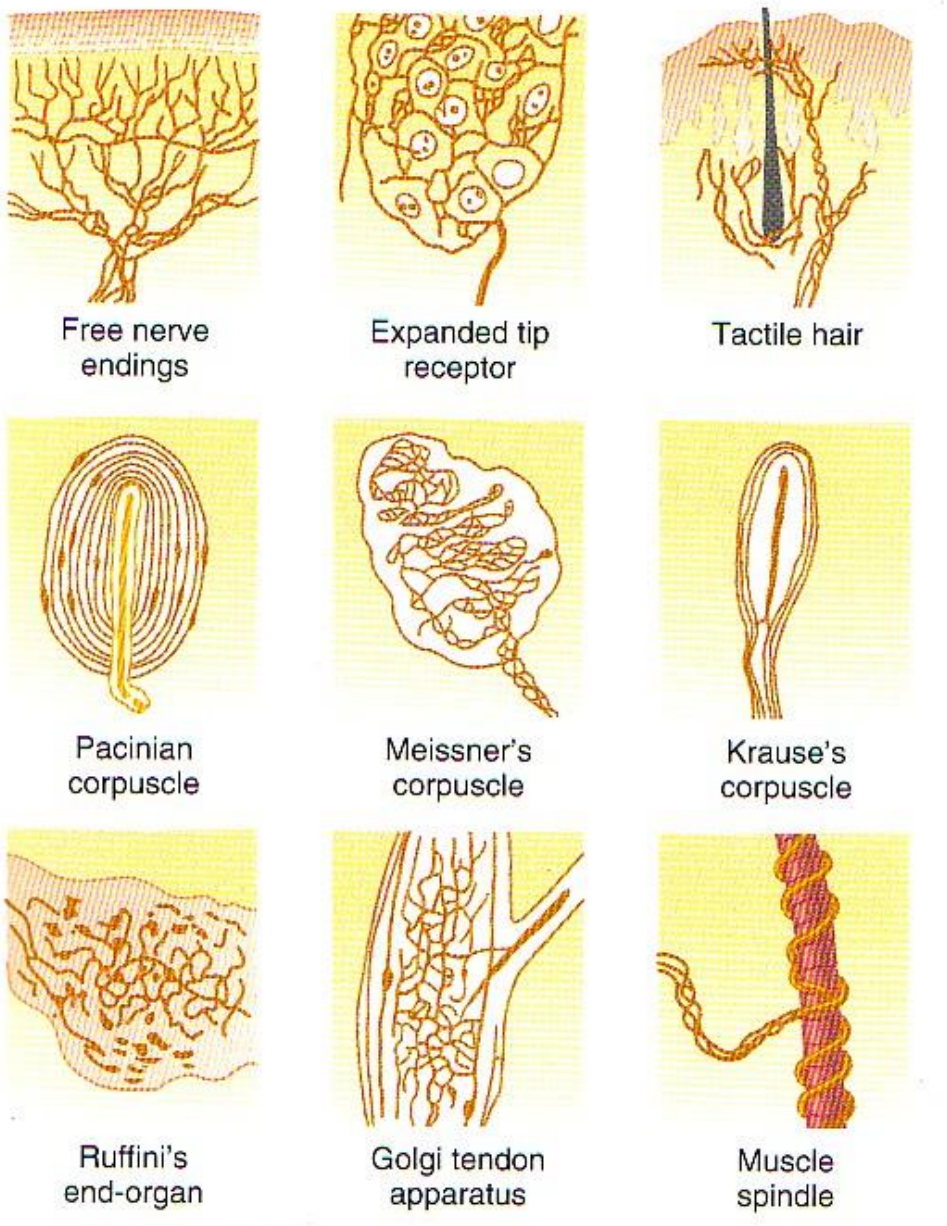


Figure 46–1

Several types of somatic sensory nerve endings.

Guyton & Hall 2011

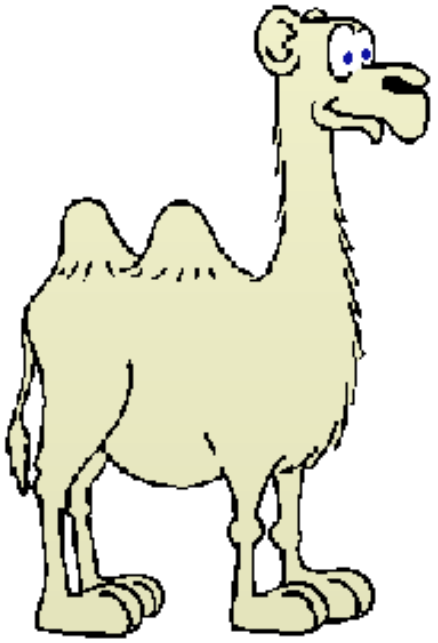
Nerve Extremes: Far ends of the Continuum

A = Large to medium myelinated, up to 120 m/sec

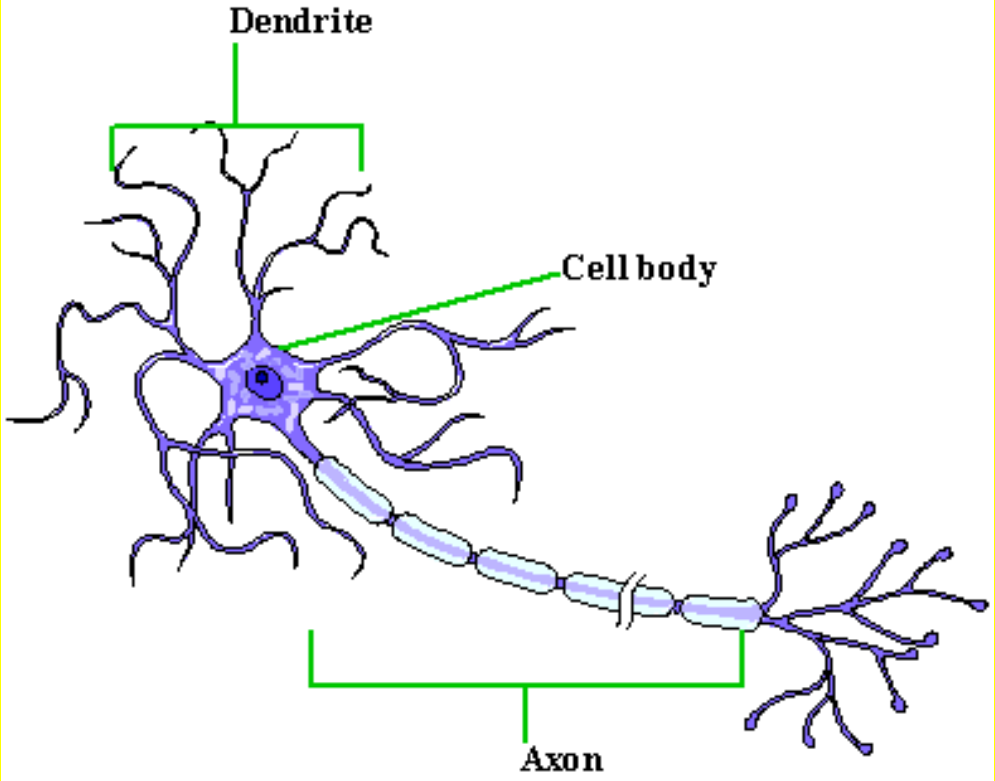
α,β, γ, δ

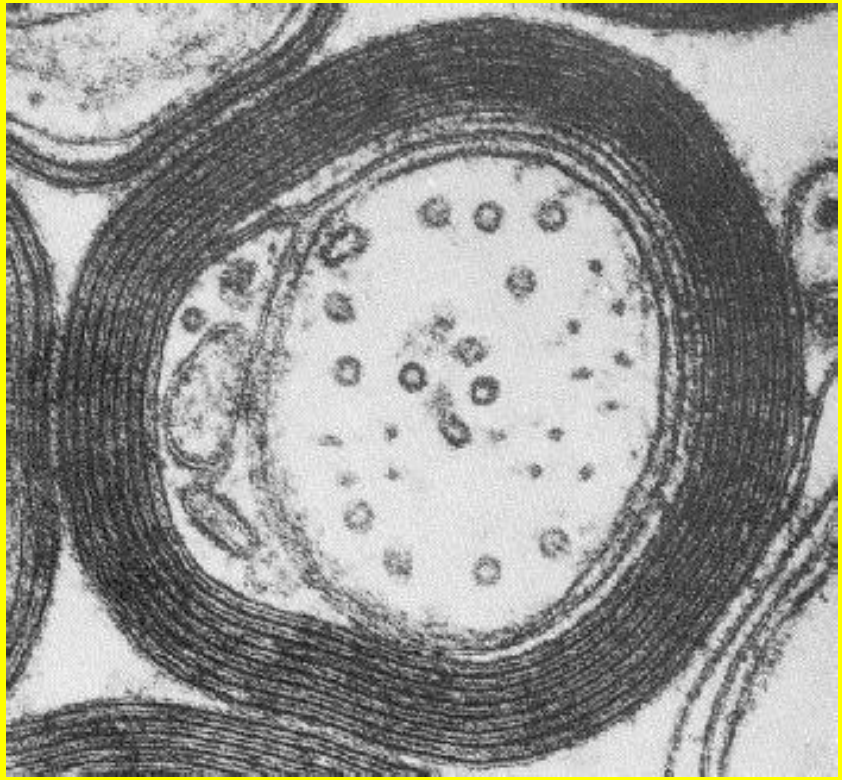
C = Small unmyelinated, 0.25 m/sec

IV



What is myelin?
Why is it important?

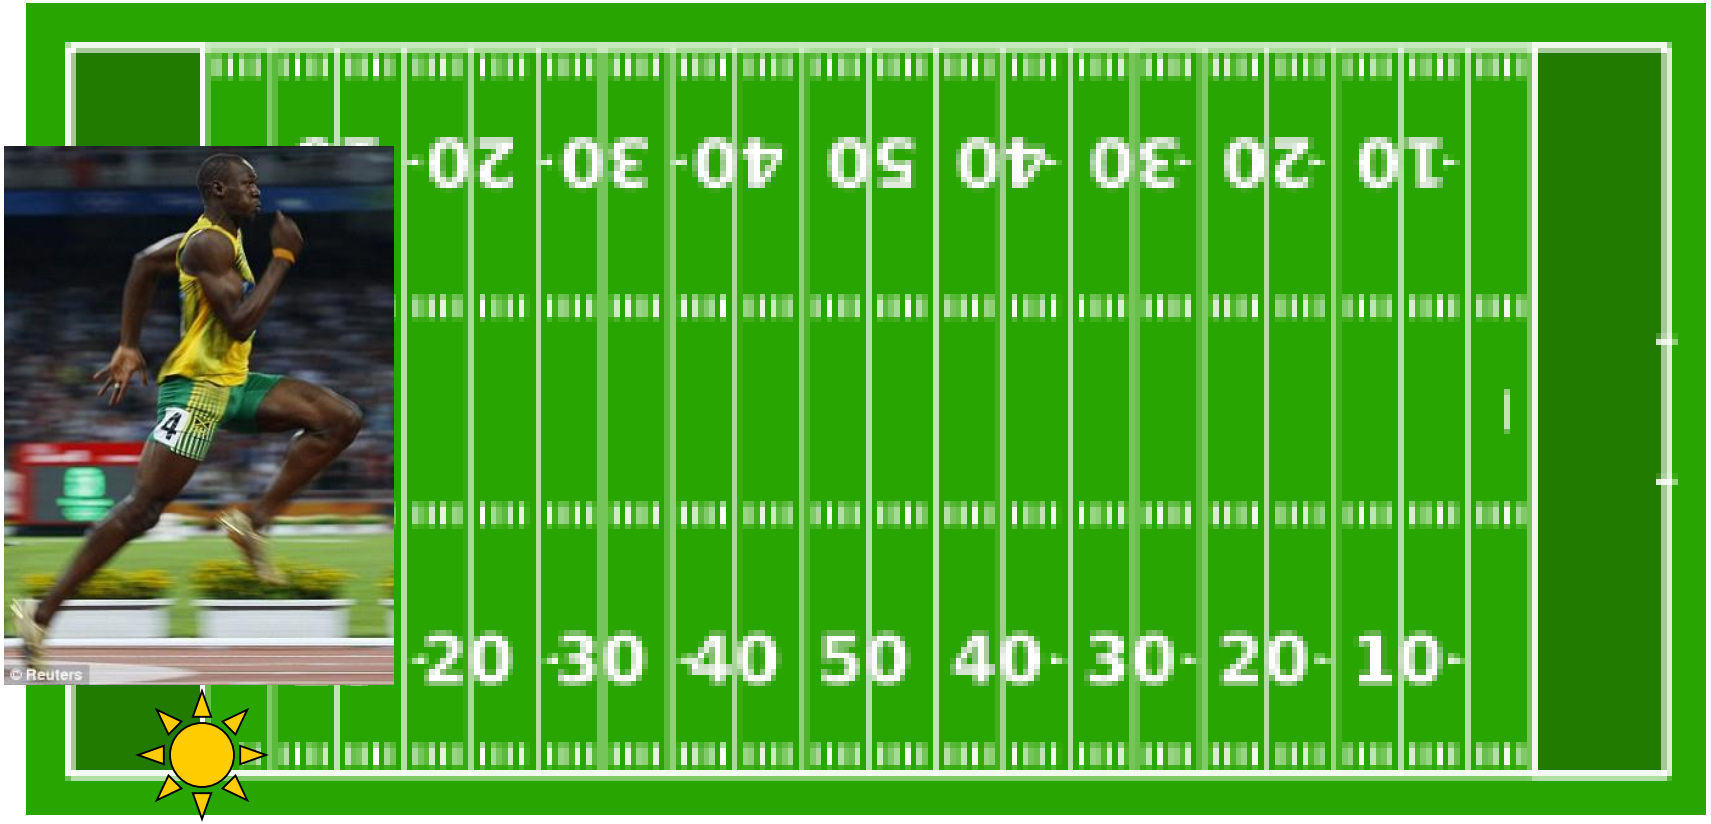




Lipid insulative coat

↑ $\vec{v}$, conserves ions & ATP

A large myelinated "survival" nerve can conduct impulses the length of football field in < 1 second!



Saltatory/Leaping Conduction! Crucial Sensory & Motor Nerves

L. <u>salt</u>are to hop or leap! Fr. <u>salt</u>, sautier, sauté, leap, high air, vault

Helmets Cheap, Brains Expensive!!
Use Your Head, Get a Helmet!!

http://www-nrd.nhtsa.dot.gov/Pubs/812018.pdf
http://www.bhsi.org/stats.htm

~ 500,000 bicyclists/yr visit emergency rooms

As of 2014, the population estimate of

State of Wyoming 584,153
Albany OR 51,980
Corvallis OR 54,953
Springfield OR 60,263

~ 26,000 traumatic brain injuries

743 of ~900 cyclist deaths, 2013 ≡ ~ 2% of all traffic fatalities

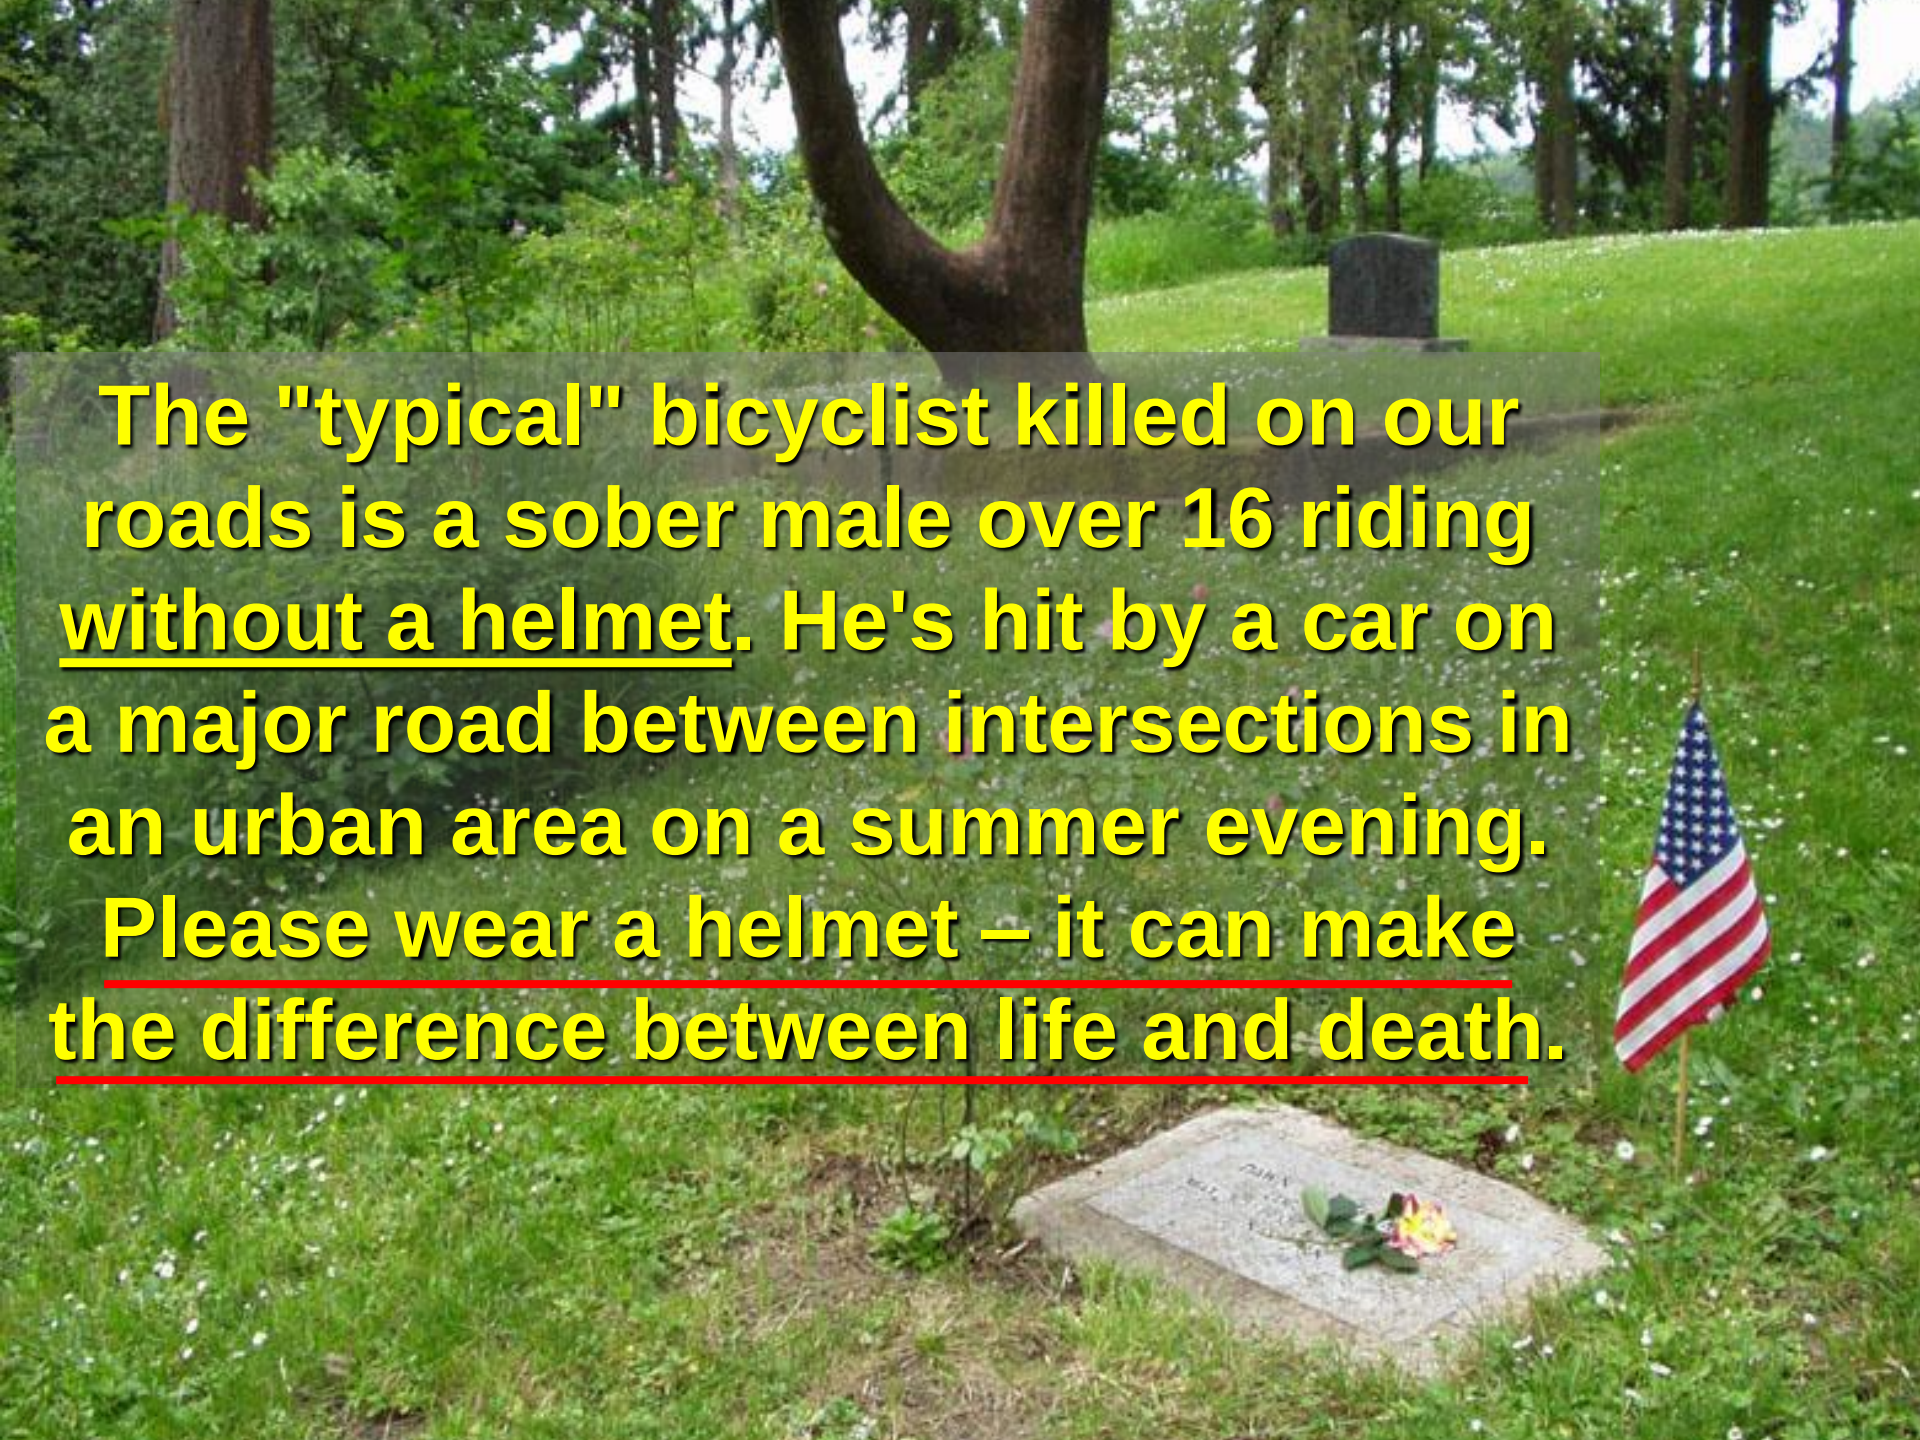
13% of deaths children ≤ 14 yr, 87% ♂

11% involved wrong-way riding!

Bicycle crashes & injuries are under reported,
since majority not serious enough for ER visits.

Helmets may reduce head & brain injury risk by 85%!

~$2.3 billion/yr = indirect injury costs from not using helmets!



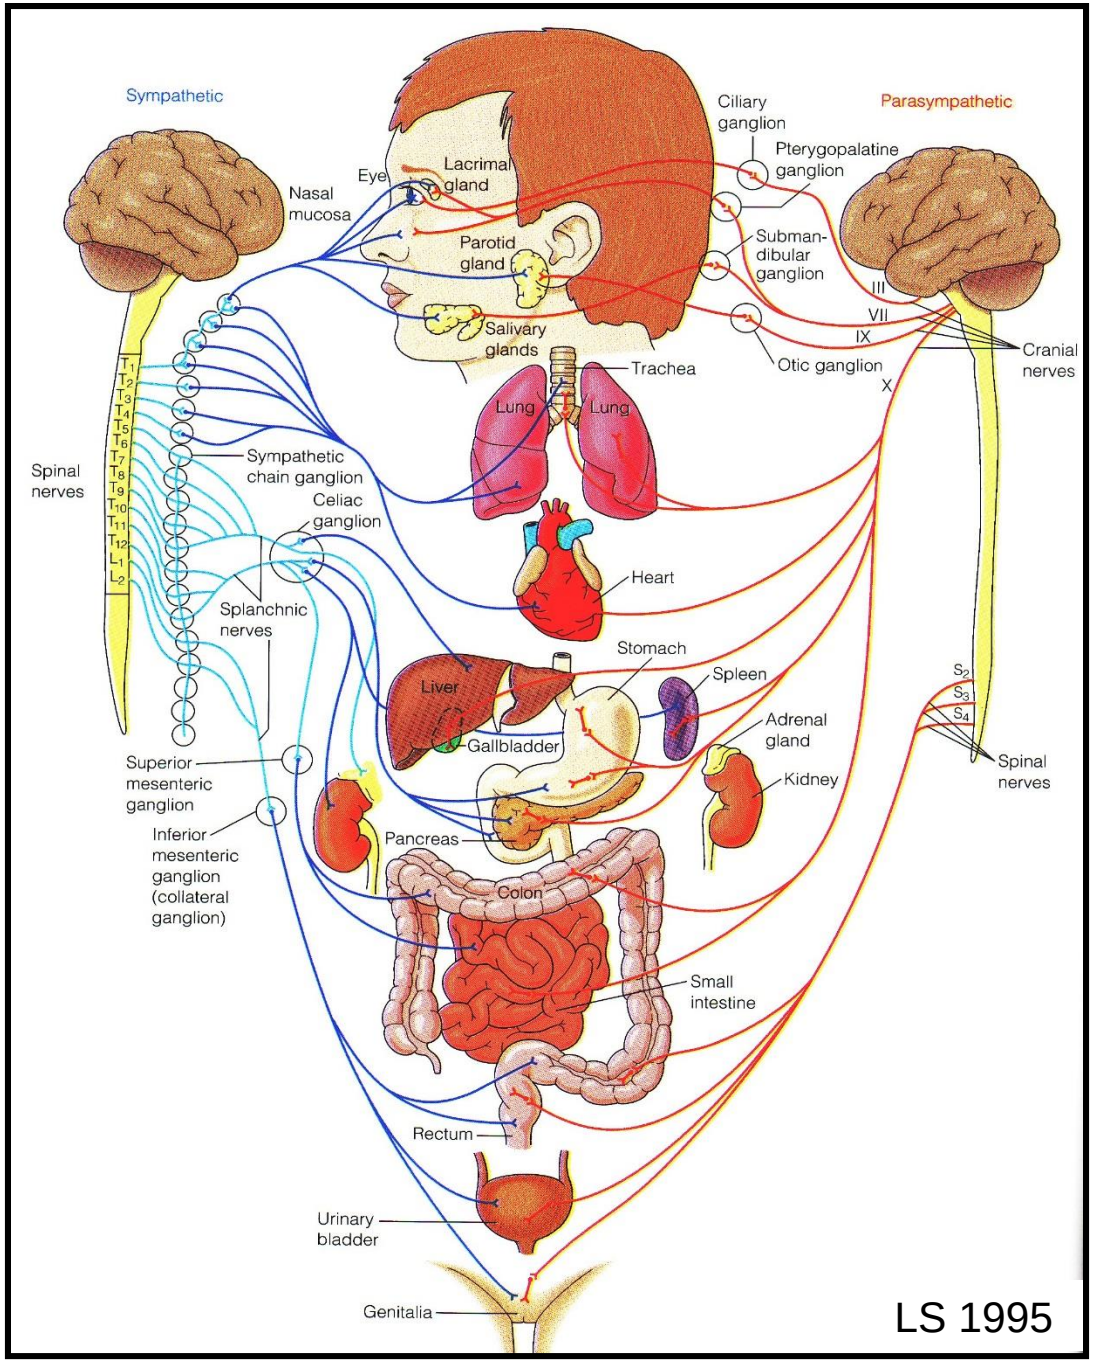
The "typical" bicyclist killed on our roads is a sober male over 16 riding without a helmet. He's hit by a car on a major road between intersections in an urban area on a summer evening. Please wear a helmet – it can make the difference between life and death.

Stories, Discussion, Questions or Comments!

Autonomic Nervous System

Why overlap or dual innervation?

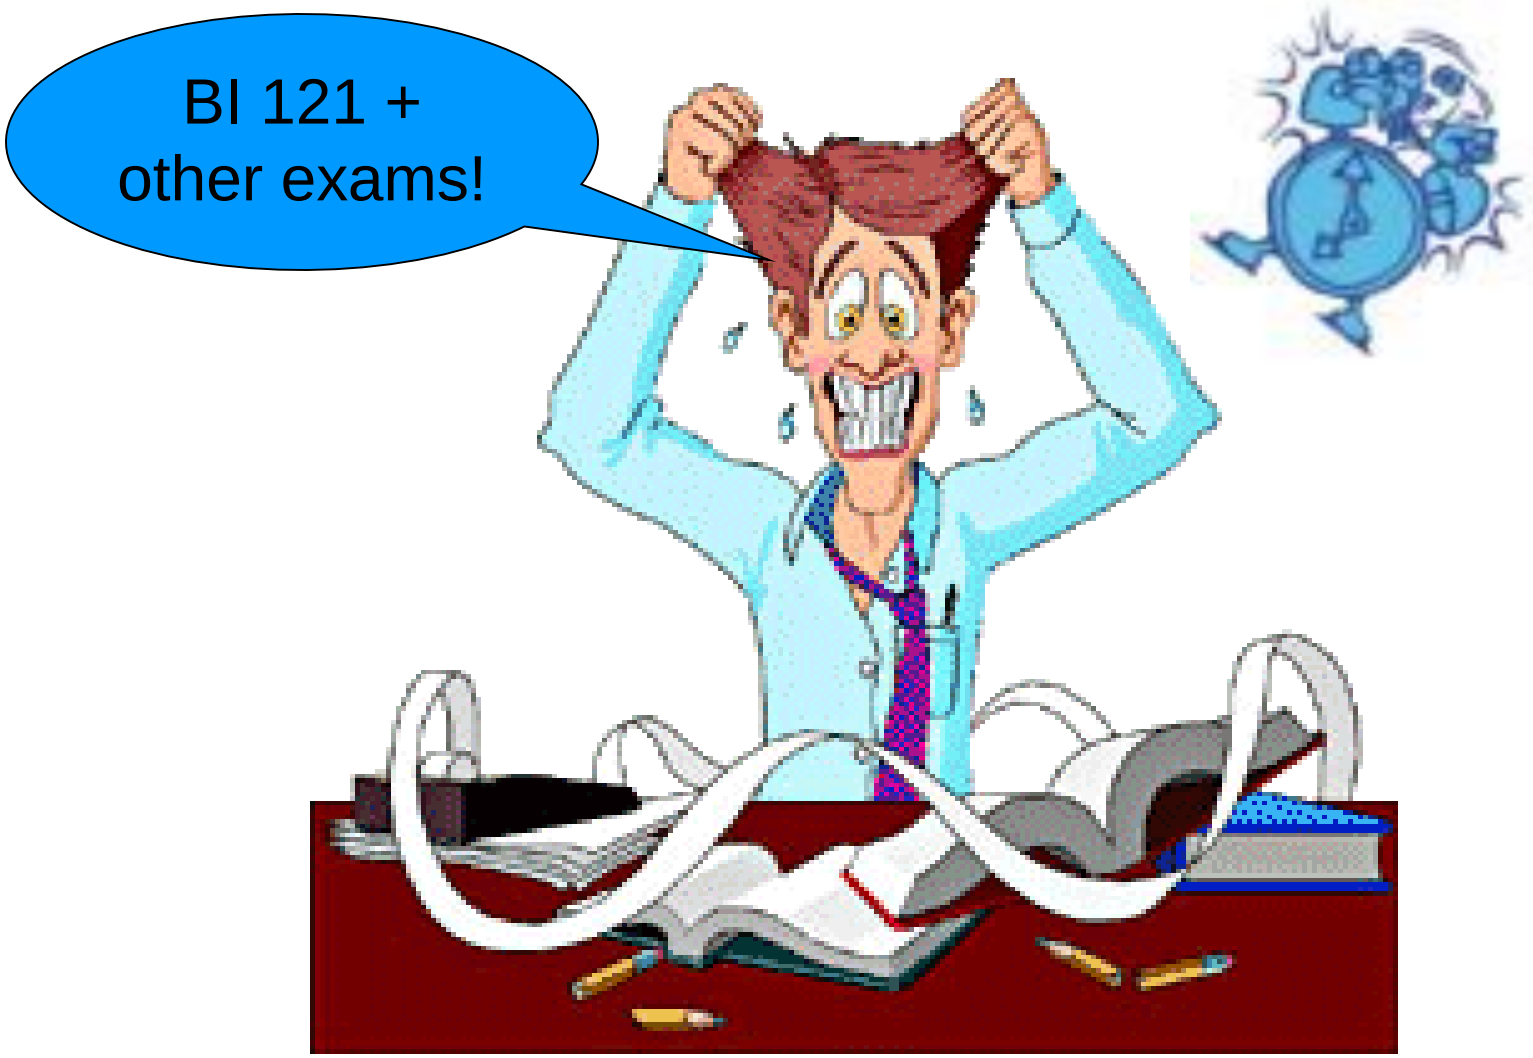
Fine-tune control & safety!



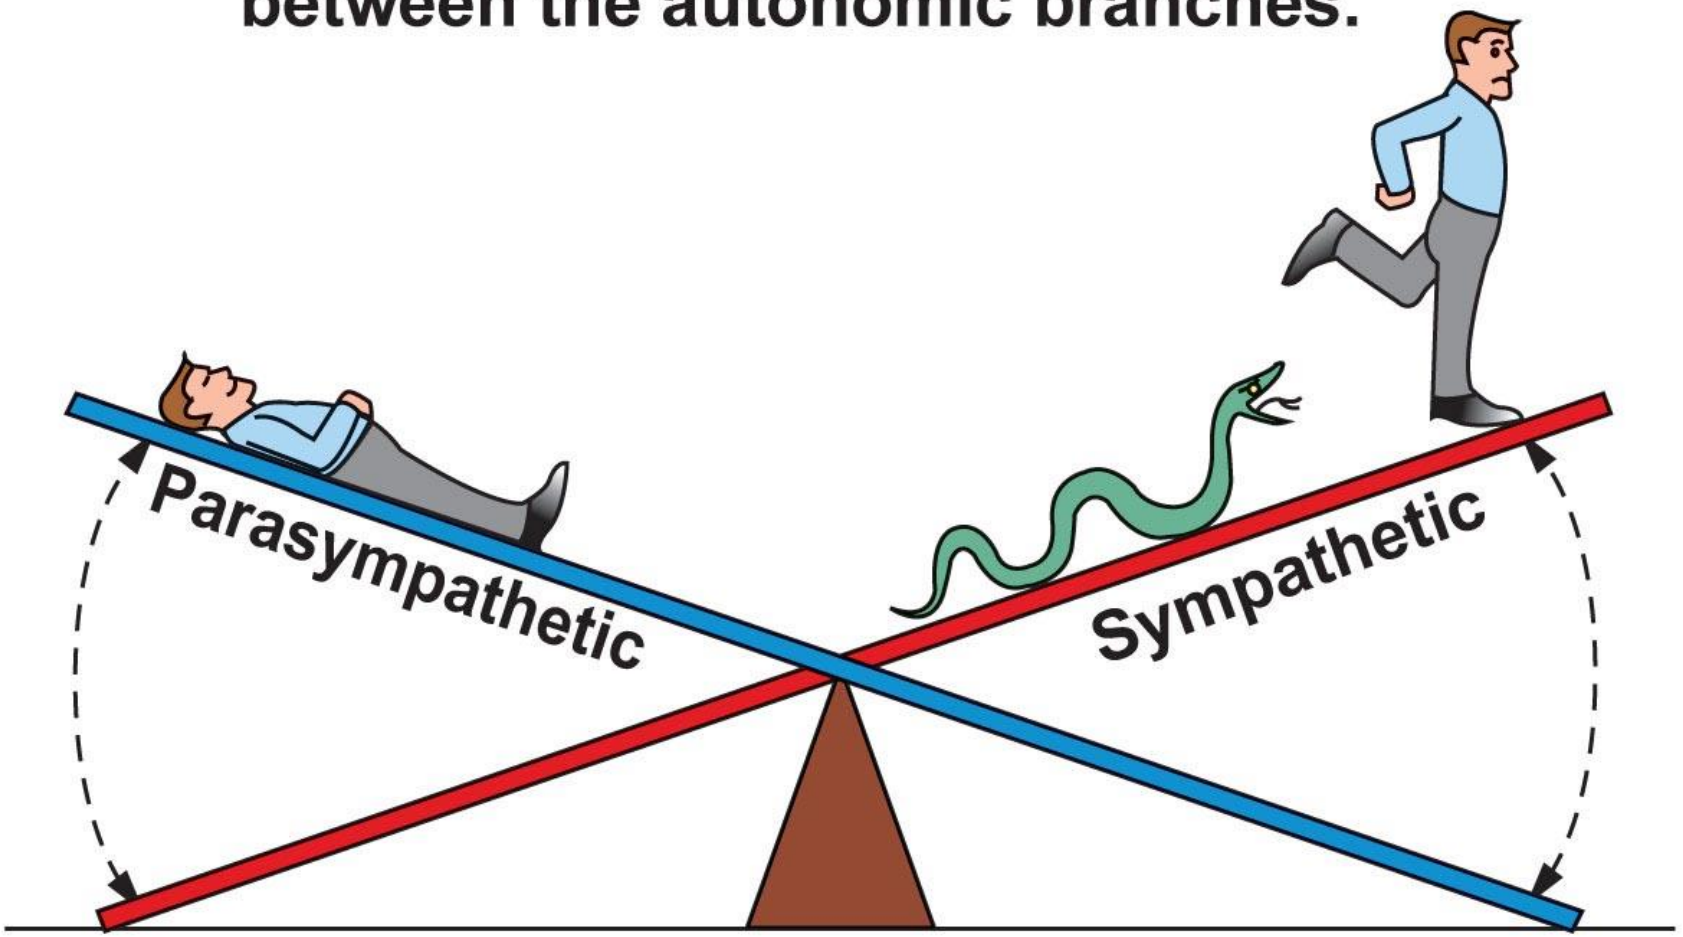
cf: LS 2012 fig 7-3

PARASYMPATHETIC = RESTING, DIGESTIVE, HOUSEKEEPING FUNCTIONS

FIGHT/FLIGHT/ALARM REACTION!!



Homeostasis is a dynamic balance between the autonomic branches.

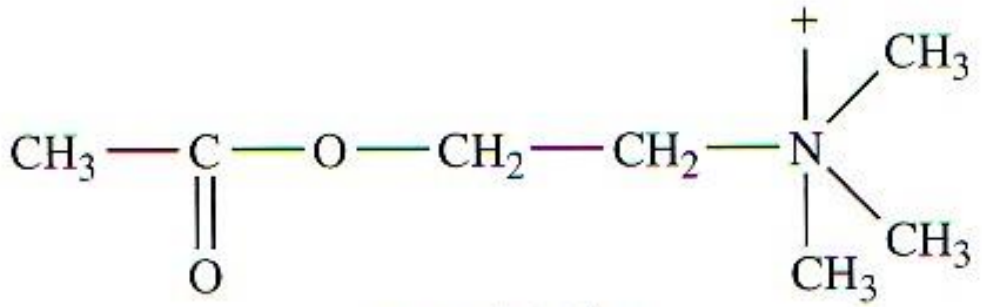


Rest-and-digest: Parasympathetic activity dominates.

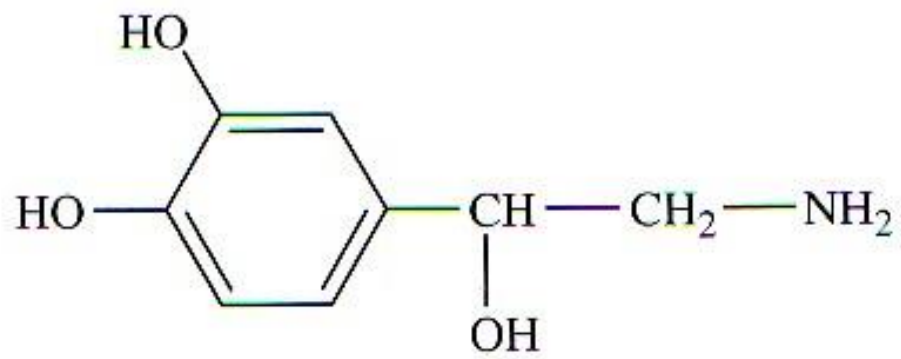
Fight-or-flight: Sympathetic activity dominates.

D Silverthorn 2010

Autonomic Neurotransmitters & Receptors



Acetylcholine



Norepinephrine

<u>Cholinergic</u>

Nicotinic

Muscarinic

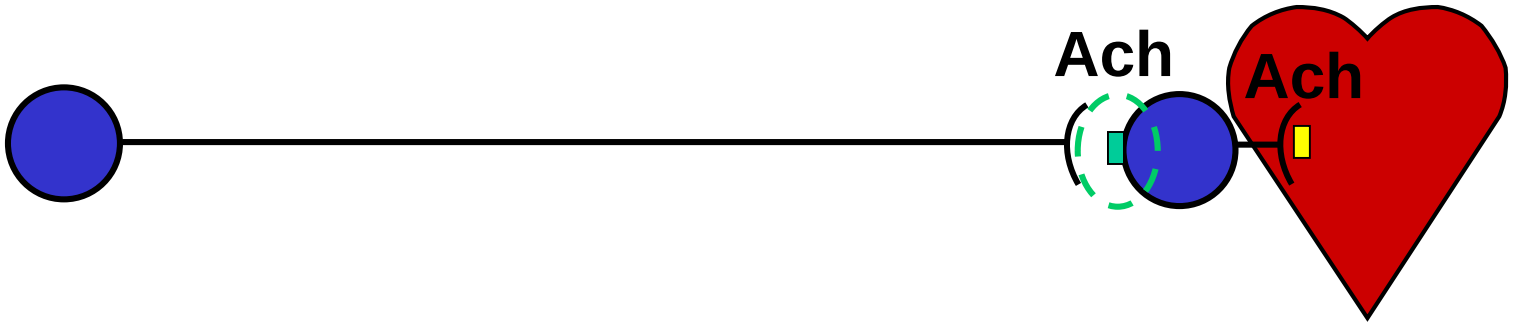
<u>Adrenergic</u>

α = Alpha

β = Beta

G&H 2011 p 731-3

Parasympathetic

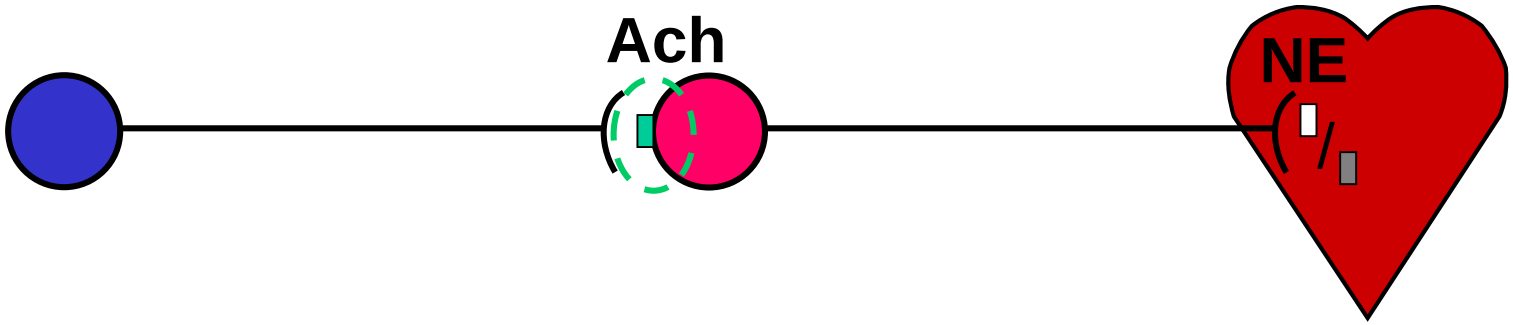


Ach = Acetylcholine

= Nicotinic Receptor

= Muscarinic Receptor

Sympathetic



NE = Norepinephrine

= α Receptor (α_1 , α_2)

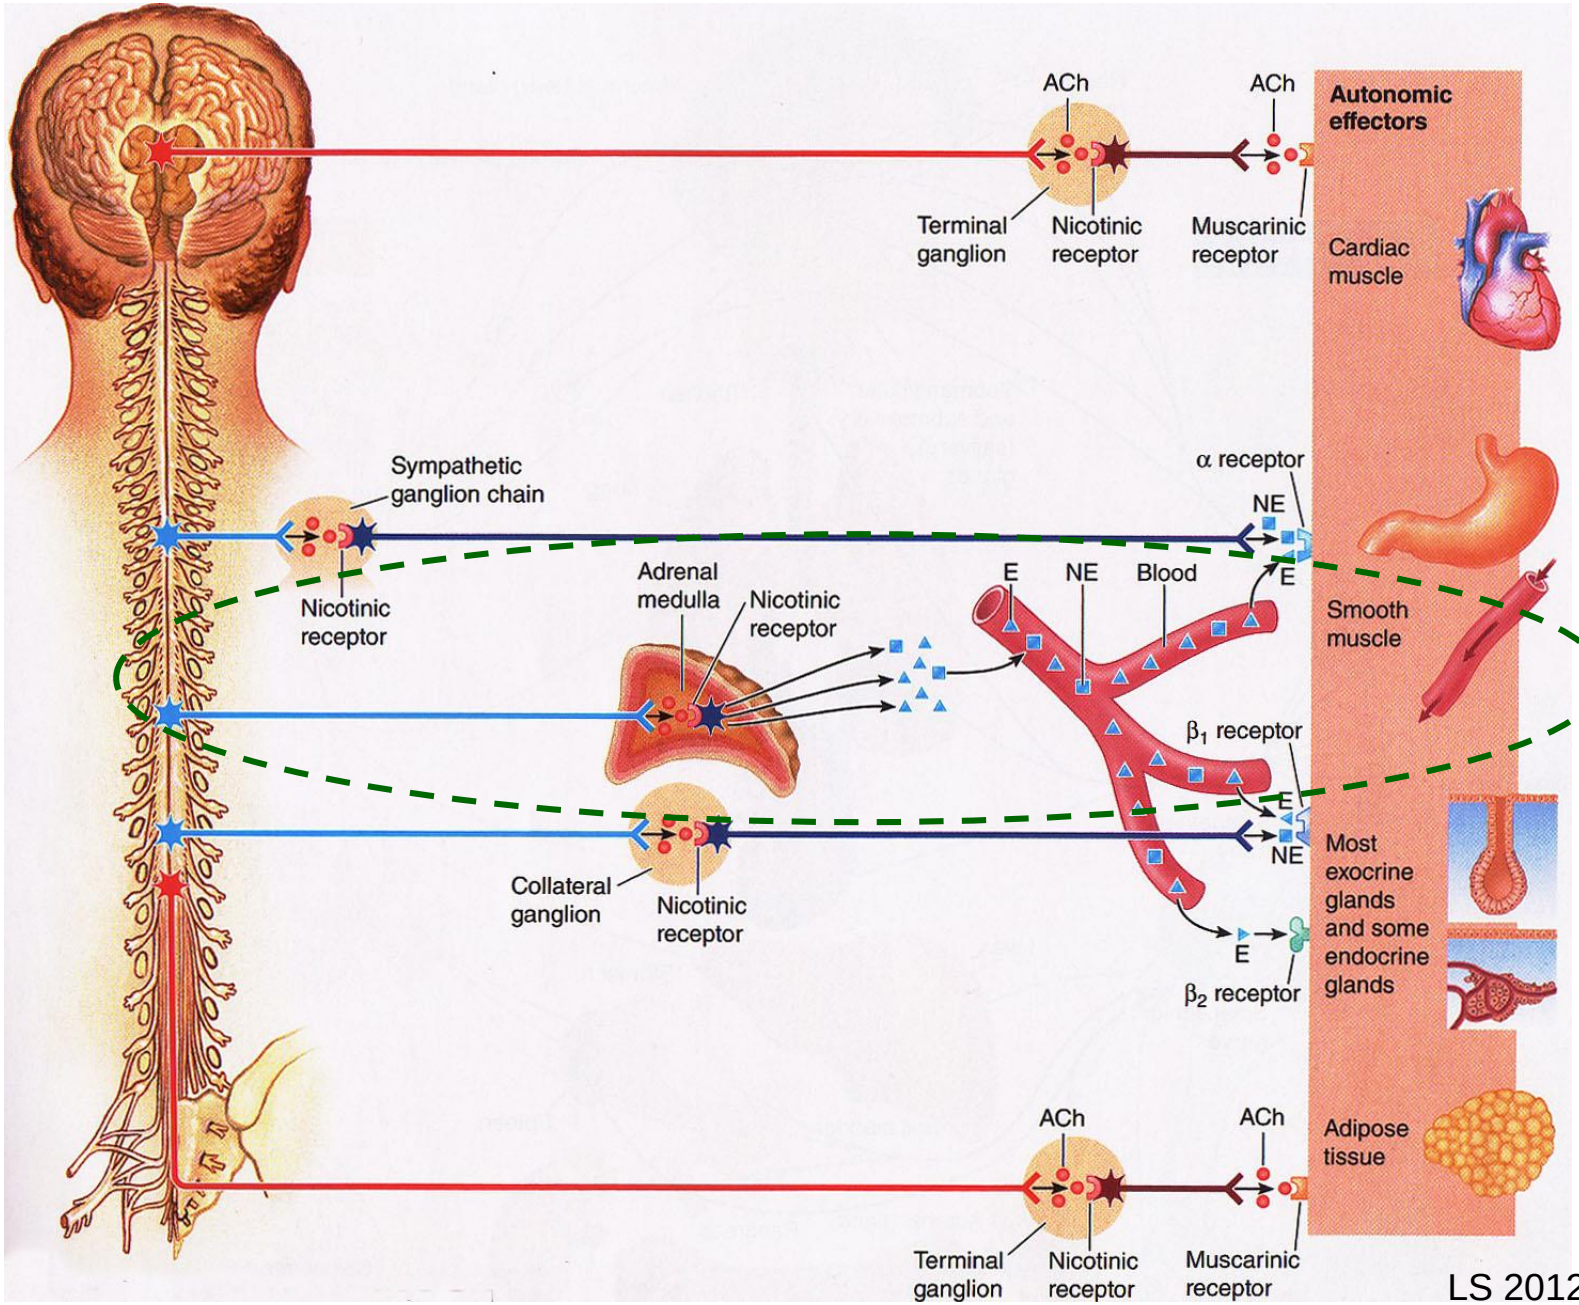
= β Receptor (β_1 , β_2)

Nicotine activates <u>both</u> Sympathetic & Parasympathetic post-ganglionic neurons!

Problem?

Like hammering the gas pedal & brake at the same time!!

Autonomic Nervous System Innervation



LS 2012 fig 7-2

In Sympathetic Fight-or-Flight why is it important to activate the adrenals?

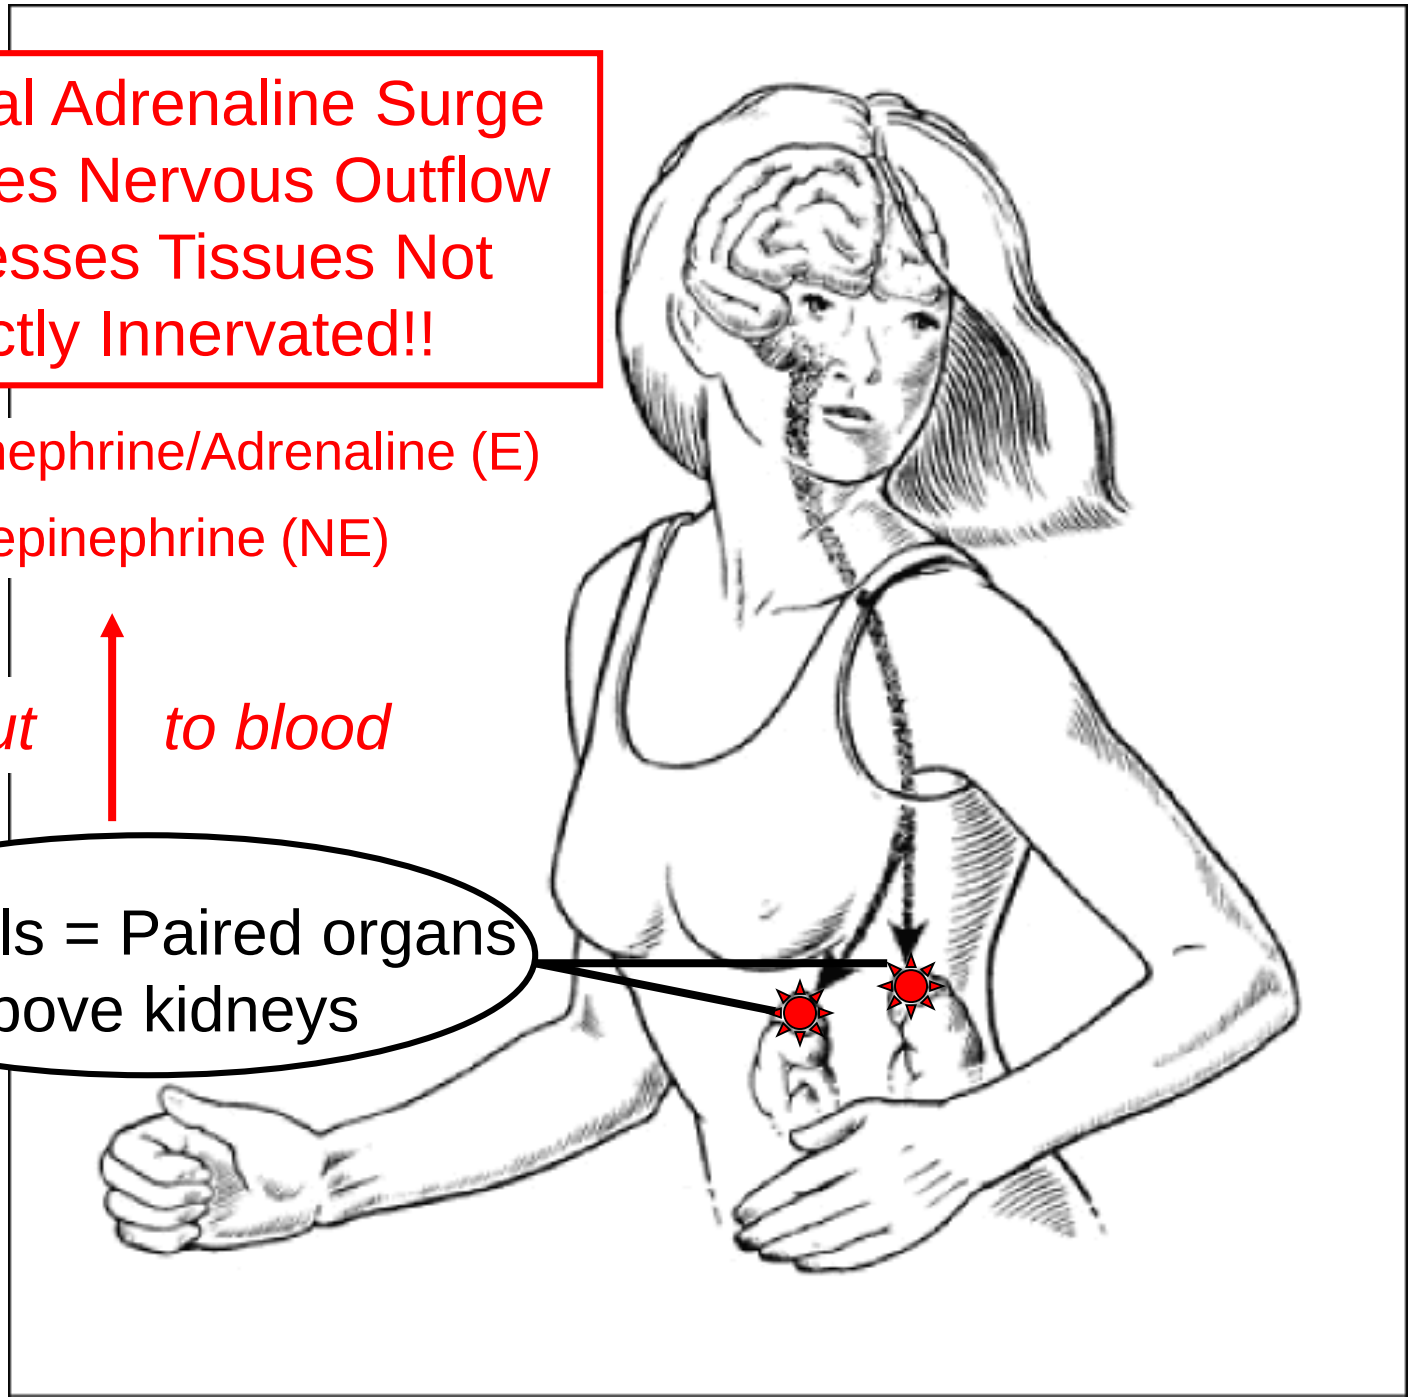
Hormonal Adrenaline Surge Reinforces Nervous Outflow & Accesses Tissues Not Directly Innervated!!

80% Epinephrine/Adrenaline (E)

20% Norepinephrine (NE)

Output *to blood*

Adrenals = Paired organs above kidneys



Fight-or-Flight Stories!

or

…choose this!!

Table 7-1 Effects of Autonomic Nervous System on Various Organs

Organ	Effect of Sympathetic Stimulation	Effect of Parasympathetic Stimulation
Heart	Increases heart rate and increases force of contraction of the whole heart	Decreases heart rate and decreases force of contraction of the atria only
Blood Vessels	Constricts	Dilates vessels supplying the penis and the clitoris only
Lungs	Dilates the bronchioles (airways)	Constricts the bronchioles
Digestive Tract	Decreases motility (movement)	Increases motility
	Contracts sphincters (to prevent forward movement of tract contents)	Relaxes sphincters (to permit forward movement of tract contents)
	Inhibits digestive secretions	Stimulates digestive secretions
Urinary Bladder	Relaxes	Contracts (emptying)
Eye	Dilates the pupil	Constricts the pupil
	Adjusts the eye for far vision	Adjusts the eye for near vision
Liver (glycogen stores)	Glycogenolysis (glucose is released)	None
Adipose Cells (fat stores)	Lipolysis (fatty acids are released)	None
Exocrine Glands		
Exocrine pancreas	Inhibits pancreatic exocrine secretion	Stimulates pancreatic exocrine secretion (important for digestion)
Sweat glands	Stimulates secretion by sweat glands important in cooling the body	Stimulates secretion by specialized sweat glands in the armpits and genital area
Salivary glands	Stimulates a small volume of thick saliva rich in mucus	Stimulates a large volume of watery saliva rich in enzymes
Endocrine Glands		
Adrenal medulla	Stimulates epinephrine and norepinephrine secretion	None
Endocrine pancreas	Inhibits insulin secretion	Stimulates insulin secretion
Genitals	Controls ejaculation (males) and orgasm contractions (both sexes)	Controls erection (penis in males and clitoris in females)
Brain Activity	Increases alertness	None
