

# *Exam II Review Slides*

Exam II!  
Whee!

We survived the exam! Happy Halloween!!  
Remember nutrient  $p$  & have safe fun!

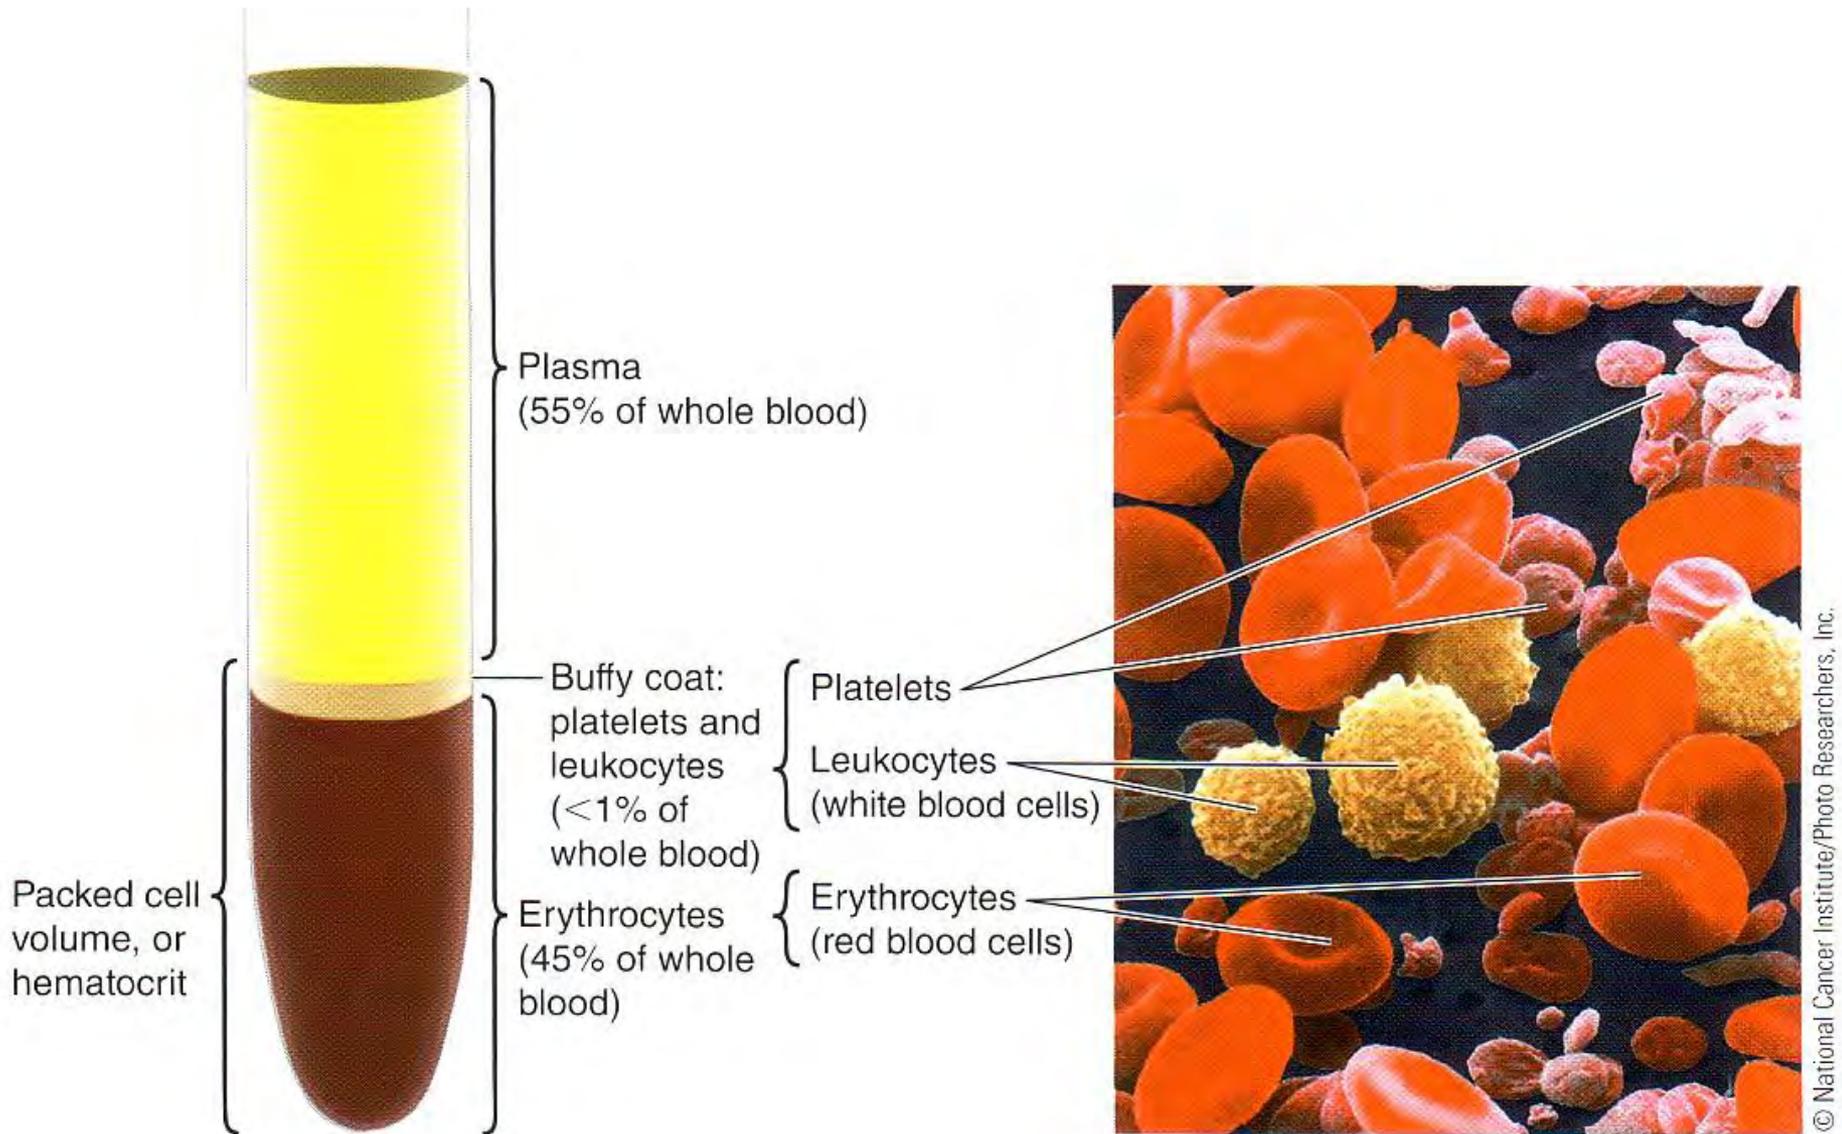

- I. Announcements** No lab today! Break for exam week!  
Next R Blood Chemistry. Thanks sincerely for helping us optimize safety by reading  $\geq 2x$  Lab 5, LM pp 5-1 to 5-6.
- II. Blood Form & Function** LS ch 11, DC Module 5 pp 35-9
  - A. Formed vs Nonformed/cells vs plasma LS fig + tab 11-1  
Cell origin - bone marrow. What's in plasma? LS p 297
  - B. Red blood cells/erythrocytes:  $O_2$  carrying LS p 299  
Normal flexible vs fragile sickle cell LS p 301
  - C. White blood cells/leukocytes: defense/immunity  
differential + general functions LS pp 298, 309-12
  - D. Platelets/thrombocytes: clotting LS pp 304-6 fig 11-6+7
- III. Blood Chemistry Lab: Basics** LM + LS ch 11 & 17
  - A. What's blood typing? ABo System LS pp 302- 4  
Rhesus factor? Erythroblastosis fetalis? LS p 303-4
  - B. What's blood glucose? Clinically healthy range?
  - C. Diabetes + Treatment LS ch 17 pp 532-5

## **IV. Exam Comments & Return**

Ghost, marshmallow  
or white blood cell?

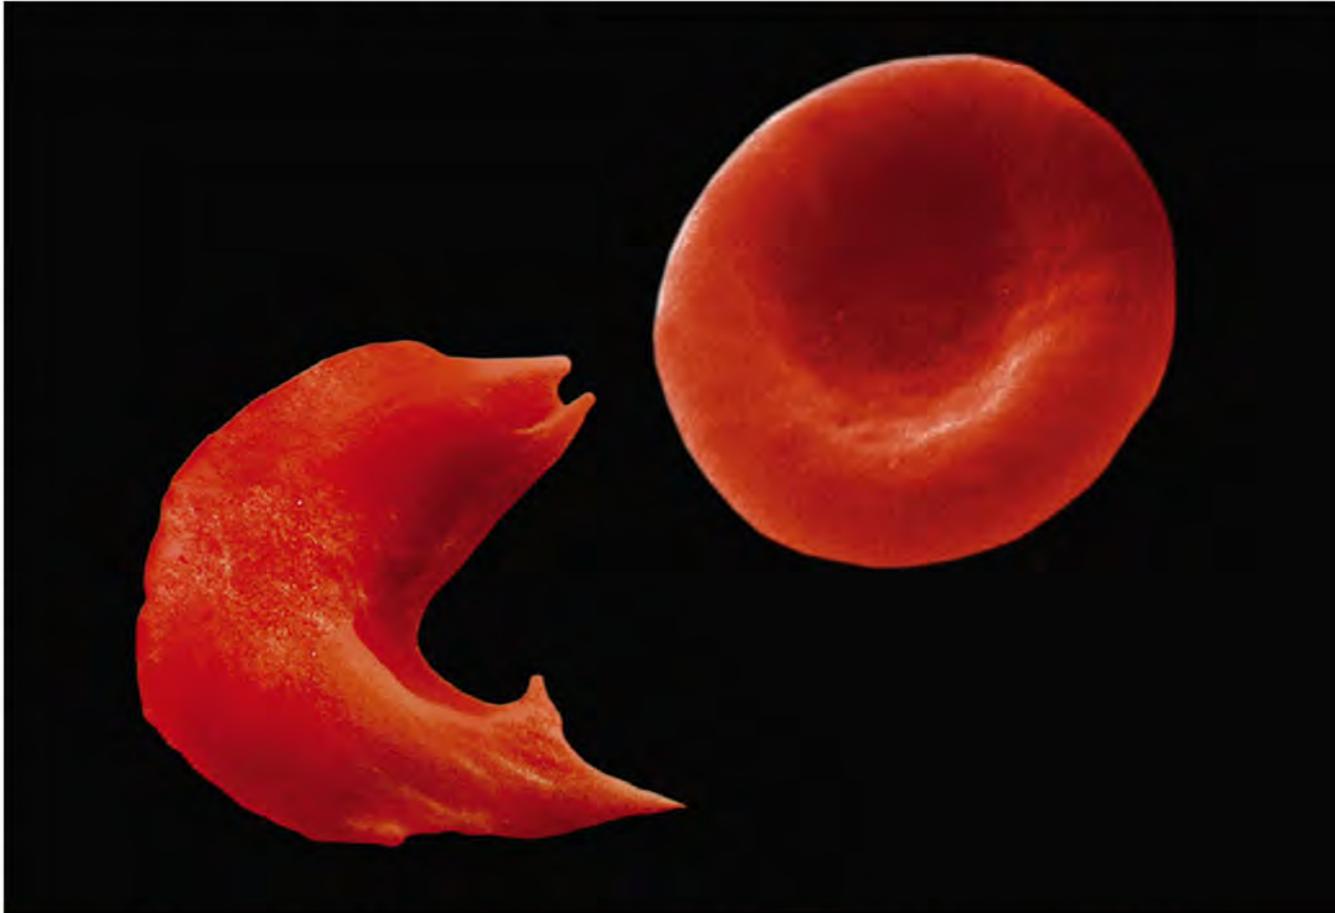

# What's in Blood? Plasma & Blood Cells

Sickle-shaped blood cells

Normal red blood cells

© Dr. Stanley Flegler/Visuals Unlimited

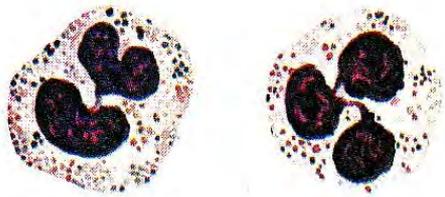

### What a difference one amino acid can make!

Amino acid sequence of normal hemoglobin:

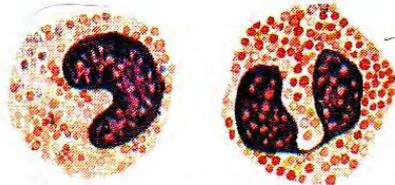

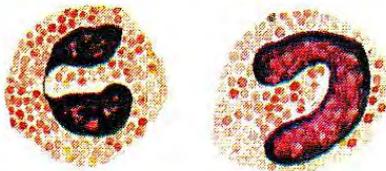

Val — His — Leu — Thr — Pro — Glu — Glu

Amino acid sequence of sickle-cell hemoglobin:

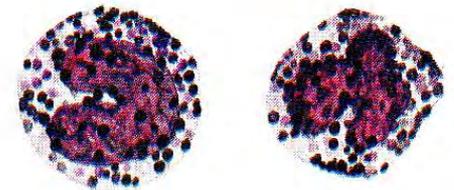

Val — His — Leu — Thr — Pro — Val — Glu

**The Blanket is RhoGam → Masks  
the Mom's Immune System!**

Glucose:  
Sugar in Blood

*Normal: 70-99*  
*Pre-Diabetes: 100-125*  
*Diabetes:  $\geq 126$  mg/dL*

## Type 1 and Type 2 Diabetes Compared

	Type 1	Type 2
Percentage of cases	5–10%	90–95%
Age of onset	<30 years	>40 years <sup>a</sup>
Associated characteristics	Autoimmune diseases, viral infections, inherited factors	Obesity, aging, inherited factors
Primary problems	Destruction of pancreatic beta cells; insulin deficiency	Insulin resistance, insulin deficiency (relative to needs)
Insulin secretion	Little or none	Varies; may be normal, increased, or decreased
Requires insulin	Always	Sometimes
Older names	Juvenile-onset diabetes Insulin-dependent diabetes mellitus (IDDM)	Adult-onset diabetes Noninsulin-dependent diabetes mellitus (NIDDM)

**Table 4–9**

## **Warning Signs of Diabetes**

These signs appear reliably in type 1 diabetes and, often, in the later stages of type 2 diabetes.

- Excessive urination and thirst
- Glucose in the urine
- Weight loss with nausea, easy tiring, weakness, or irritability
- Cravings for food, especially for sweets
- Frequent infections of the skin, gums, vagina, or urinary tract
- Vision disturbances; blurred vision
- Pain in the legs, feet, or fingers
- Slow healing of cuts and bruises
- Itching
- Drowsiness
- Abnormally high glucose in the blood

*Diabetics must constantly juggle diet, exercise & medication to control blood glucose!*

**Medication**

**Diet**

**Exercise**

# BI 121 Lecture 10

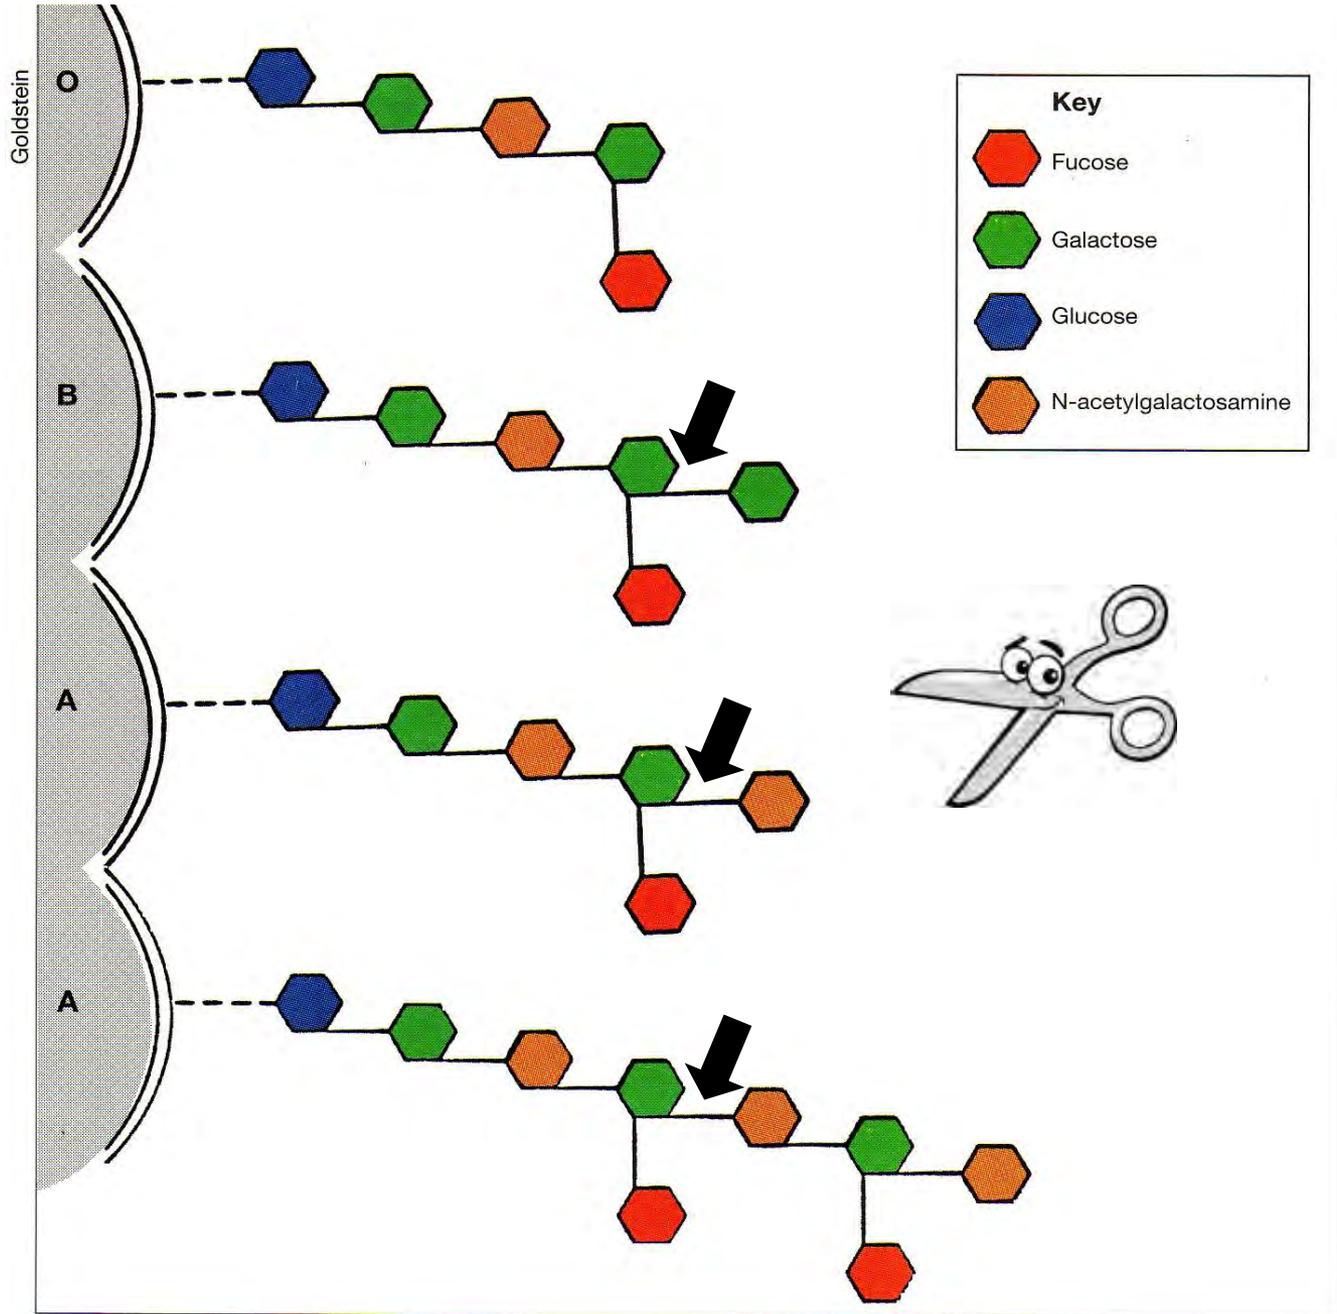

...This Thursday more fun & data about me! Heck yeah!!

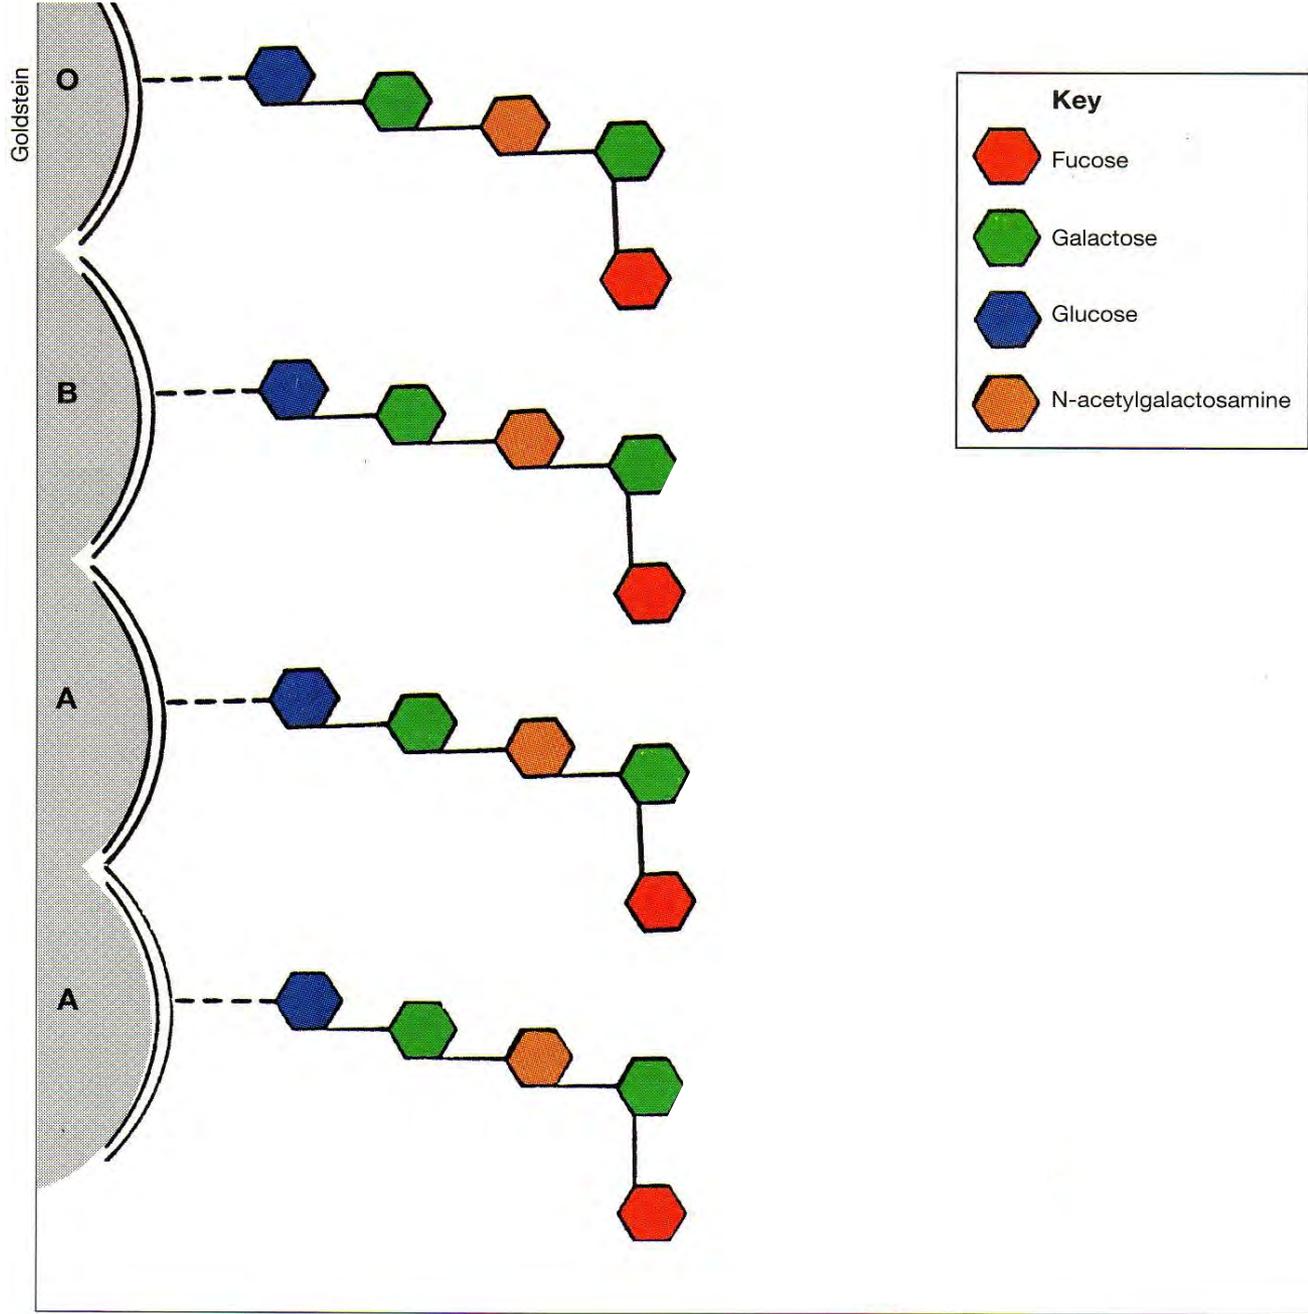

- I. Announcements** To make Lab 5 educational, fun & safe for all, **please read pp 5-1 thru 5-6 in LM twice before Thursday!** Remaining exams & notebooks returned > lecture. Key posted in glass box in Huestis near 120 HUE. Estimate grade? Q?
- II. Blood Chemistry Review** LS ch 11 + 17, DC Module 5, Q?
- III. Endocrinology Overview** LS ch 17, DC Module 13, SI Fox+
  - A. Vignette: Cushing's syndrome** LS fig 17-20 p 521-2
  - B. Endocrine system** DC p 103 fig 13-1, LS fig 17-1, tab 17-1
  - C. What's an endocrine? + classes** ~ LS pp 495 - 6
  - D. Hypothalamus (Master) – Pituitary (subcontroller)**  
DC pp 104-6 + LS pp 499-506
  - E. Posterior pituitary + hormones** DC p 108, LS fig 17-4 p 502
  - F. Anterior pituitary + hormones** DC pp 105-7, LS pp 502-6
  - G. GH: Body builder's dream? Fountain of youth?** LS pp 506-11
  - H. Peripheral endocrine organs** DC pp 109-13, LS pp 513-36
    - 1. Pancreas (insulin – glucagon see-saw!) 2. Thyroid 3. Adrenals**

***No food, drink or gum in lab!  
Thanks sincerely!***

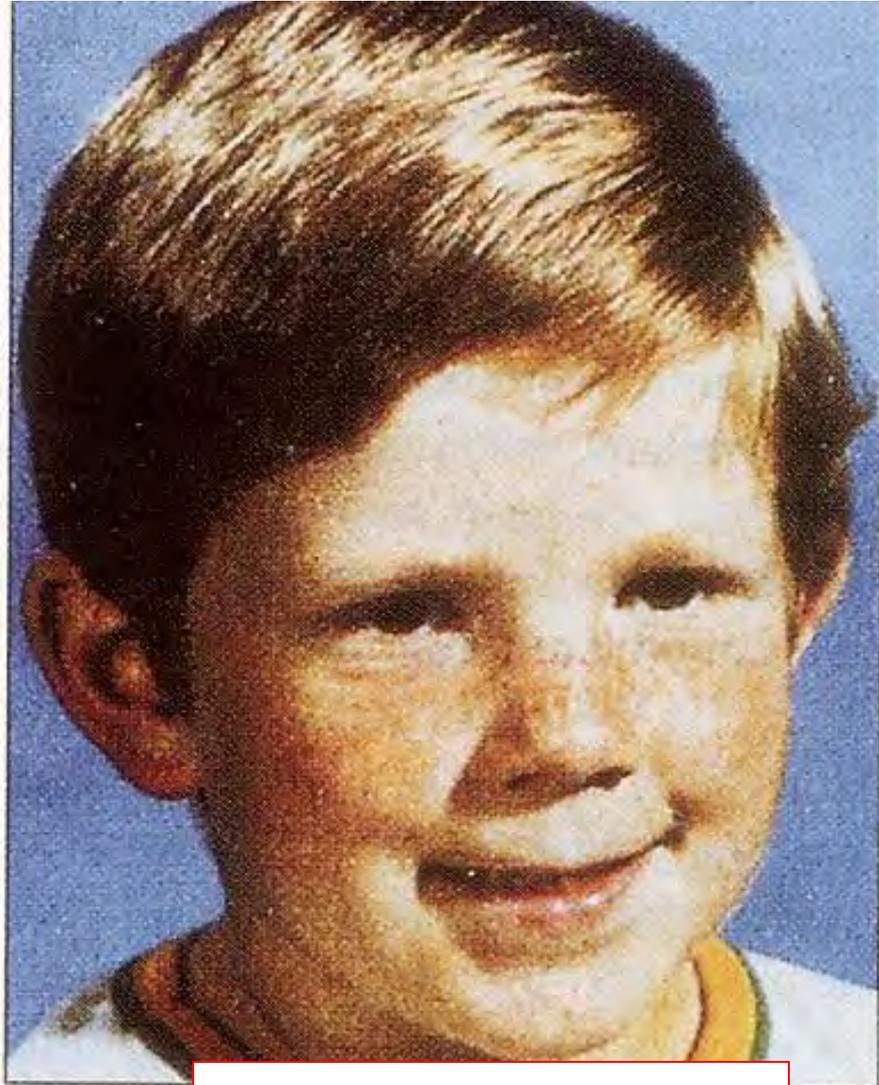

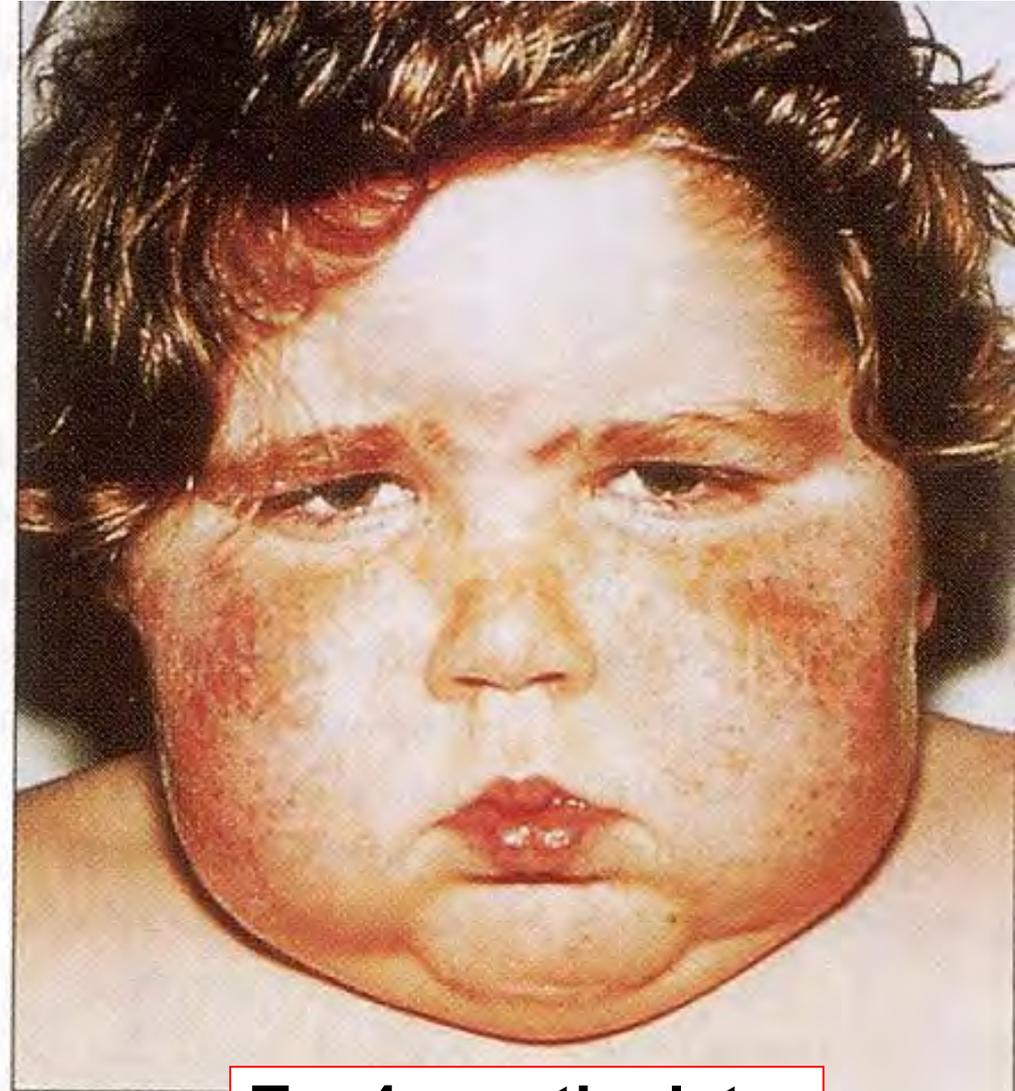

# All like Type O!

***Cushing's Syndrome = Hypersecretion of Cortisol: Hypothalamic (CRH), Pituitary (ACTH), or Adrenal (Cortisol)***

**T = 0, near normal**

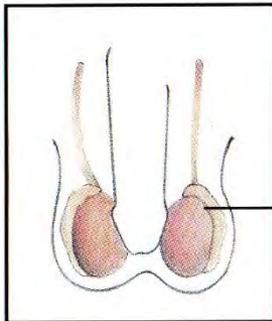

**T = 4 months later**

**Hypophysis ≡ Pituitary**

Personal data I can  
use for a lifetime!!

Heck yeah!

## BI 121 Lecture 11

### I. **Announcements** ***Blood Chem Lab today!*** Fun day!!

Personal data!!! If you haven't already done so, please review Lab 5 in LM & in e-mail. Thanks sincerely!

Lab Manual & Exam I remaining returns. Q from last t?

### II. **Safety & Techniques Review for Blood Chem Lab** Q?

### III. **Endocrine Connections**

A. Hypothalamus-Anterior pituitary intimate circulation

B. Anterior pituitary hormones DC pp 105-7, LS pp 502-6

C. GH: Body builder's dream? Fountain of youth?

LS pp 506-11

D. Peripheral endocrine organs

DC pp 109-13, LS pp 513-36

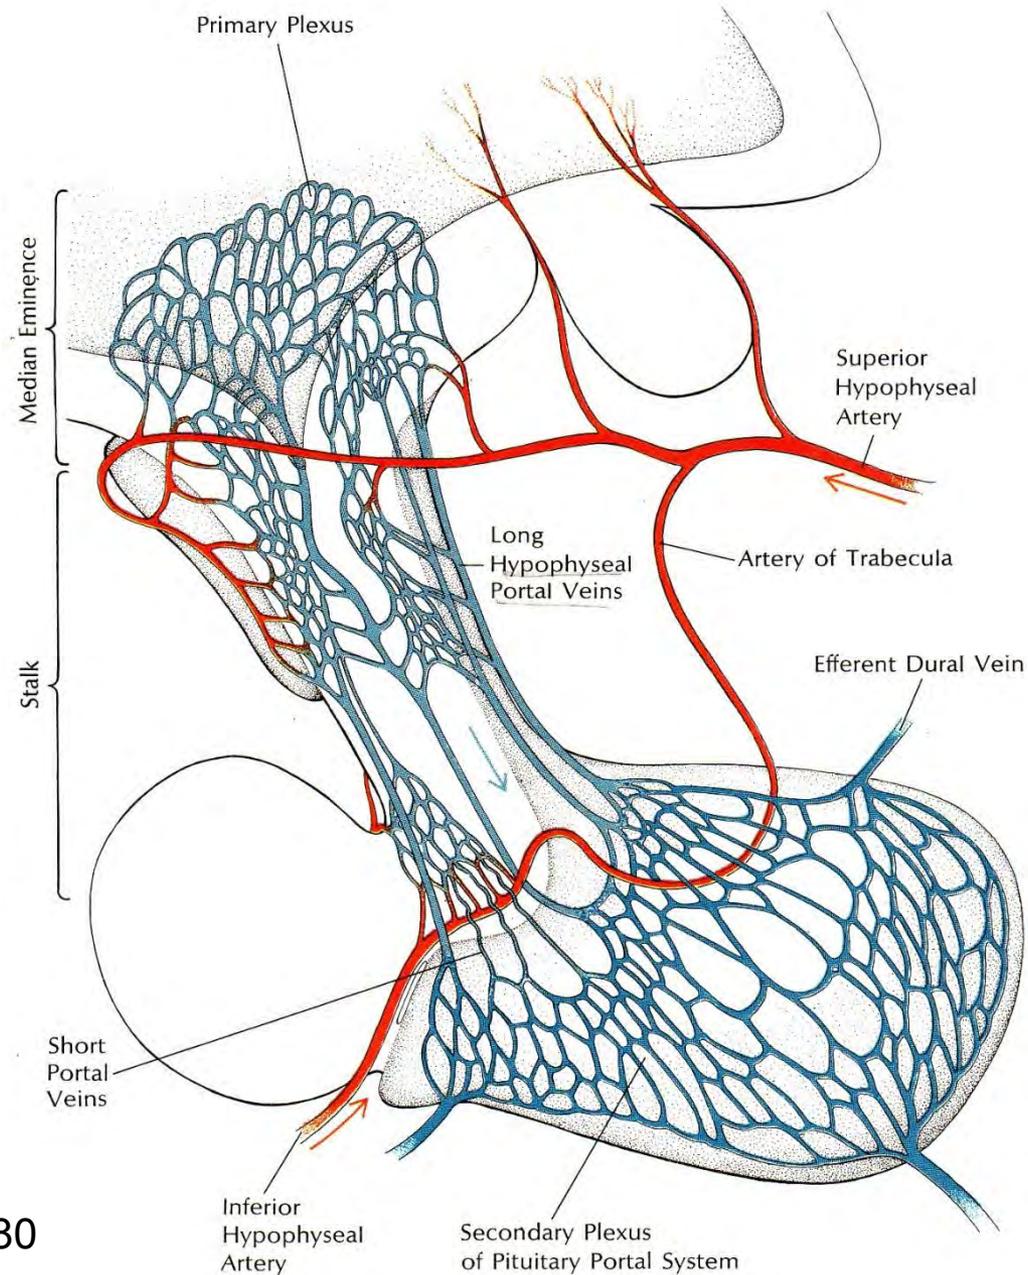

1. Pancreas (insulin – glucagon see-saw!)

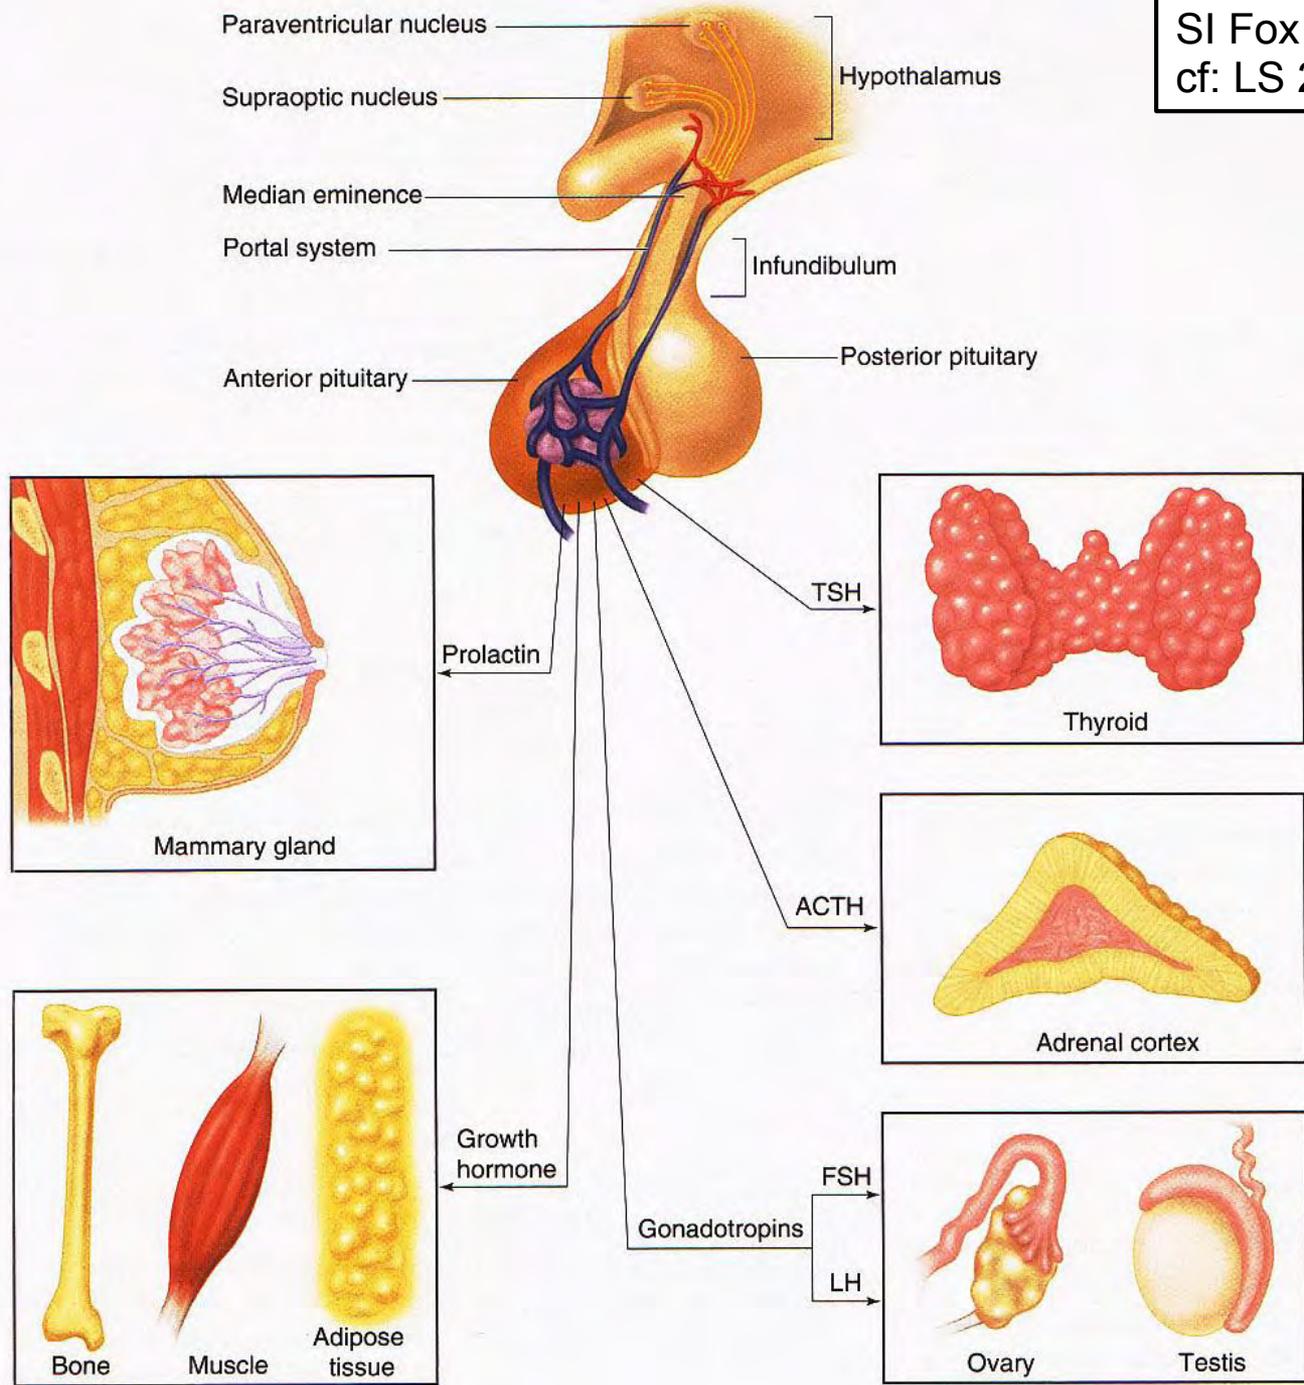

2. Thyroid

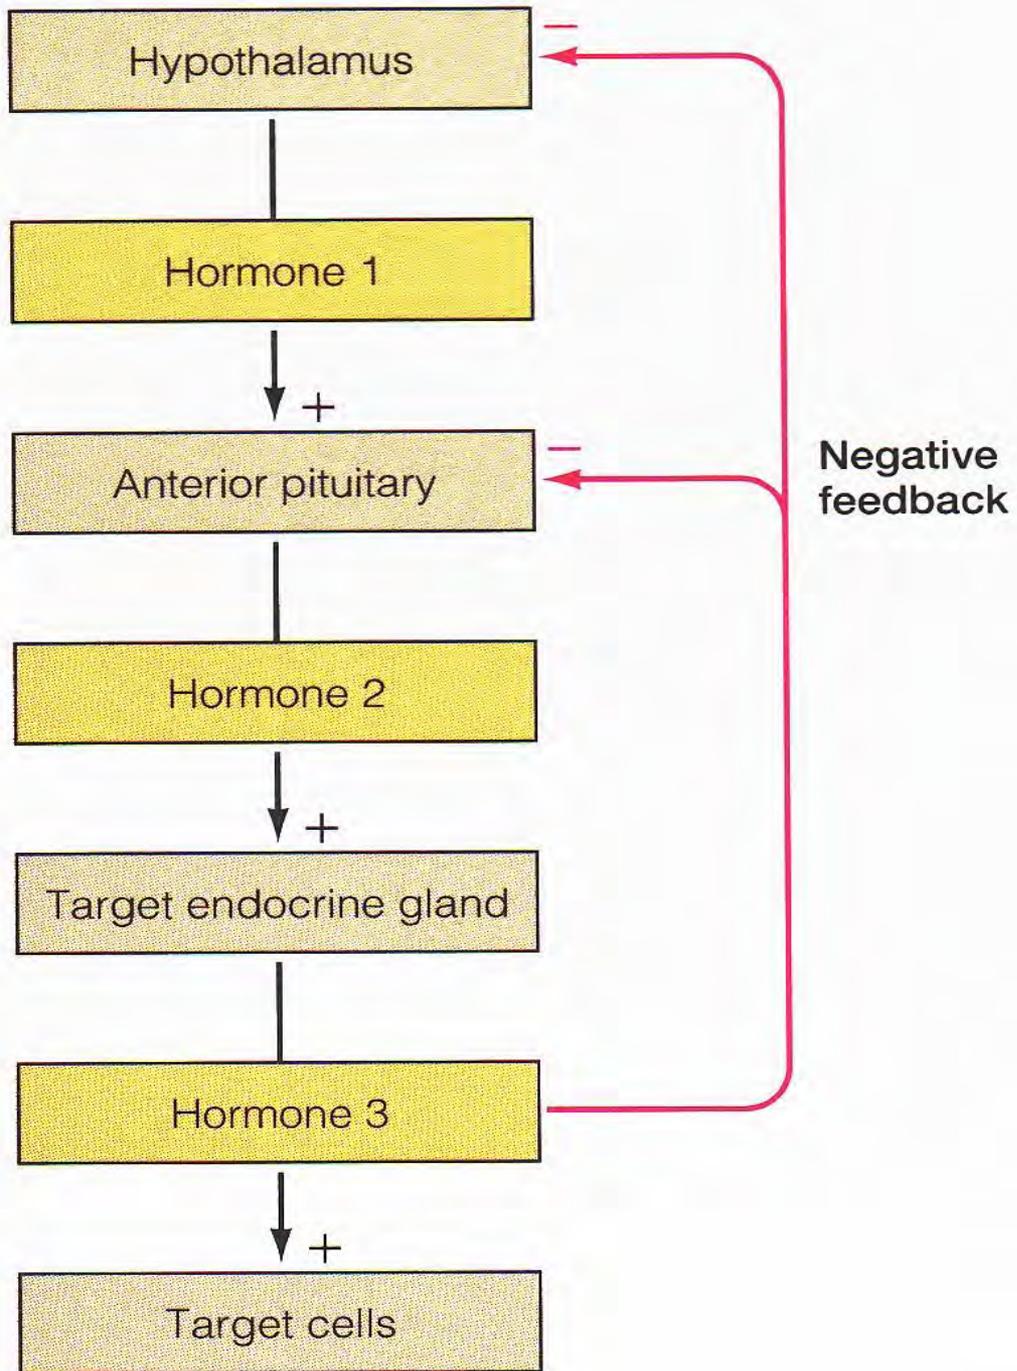

3. Adrenals

### IV. **Introduction to the Nervous System** LS ch 5, DC Module 9

# Capillary-Venule-Capillary Intimate Circulation

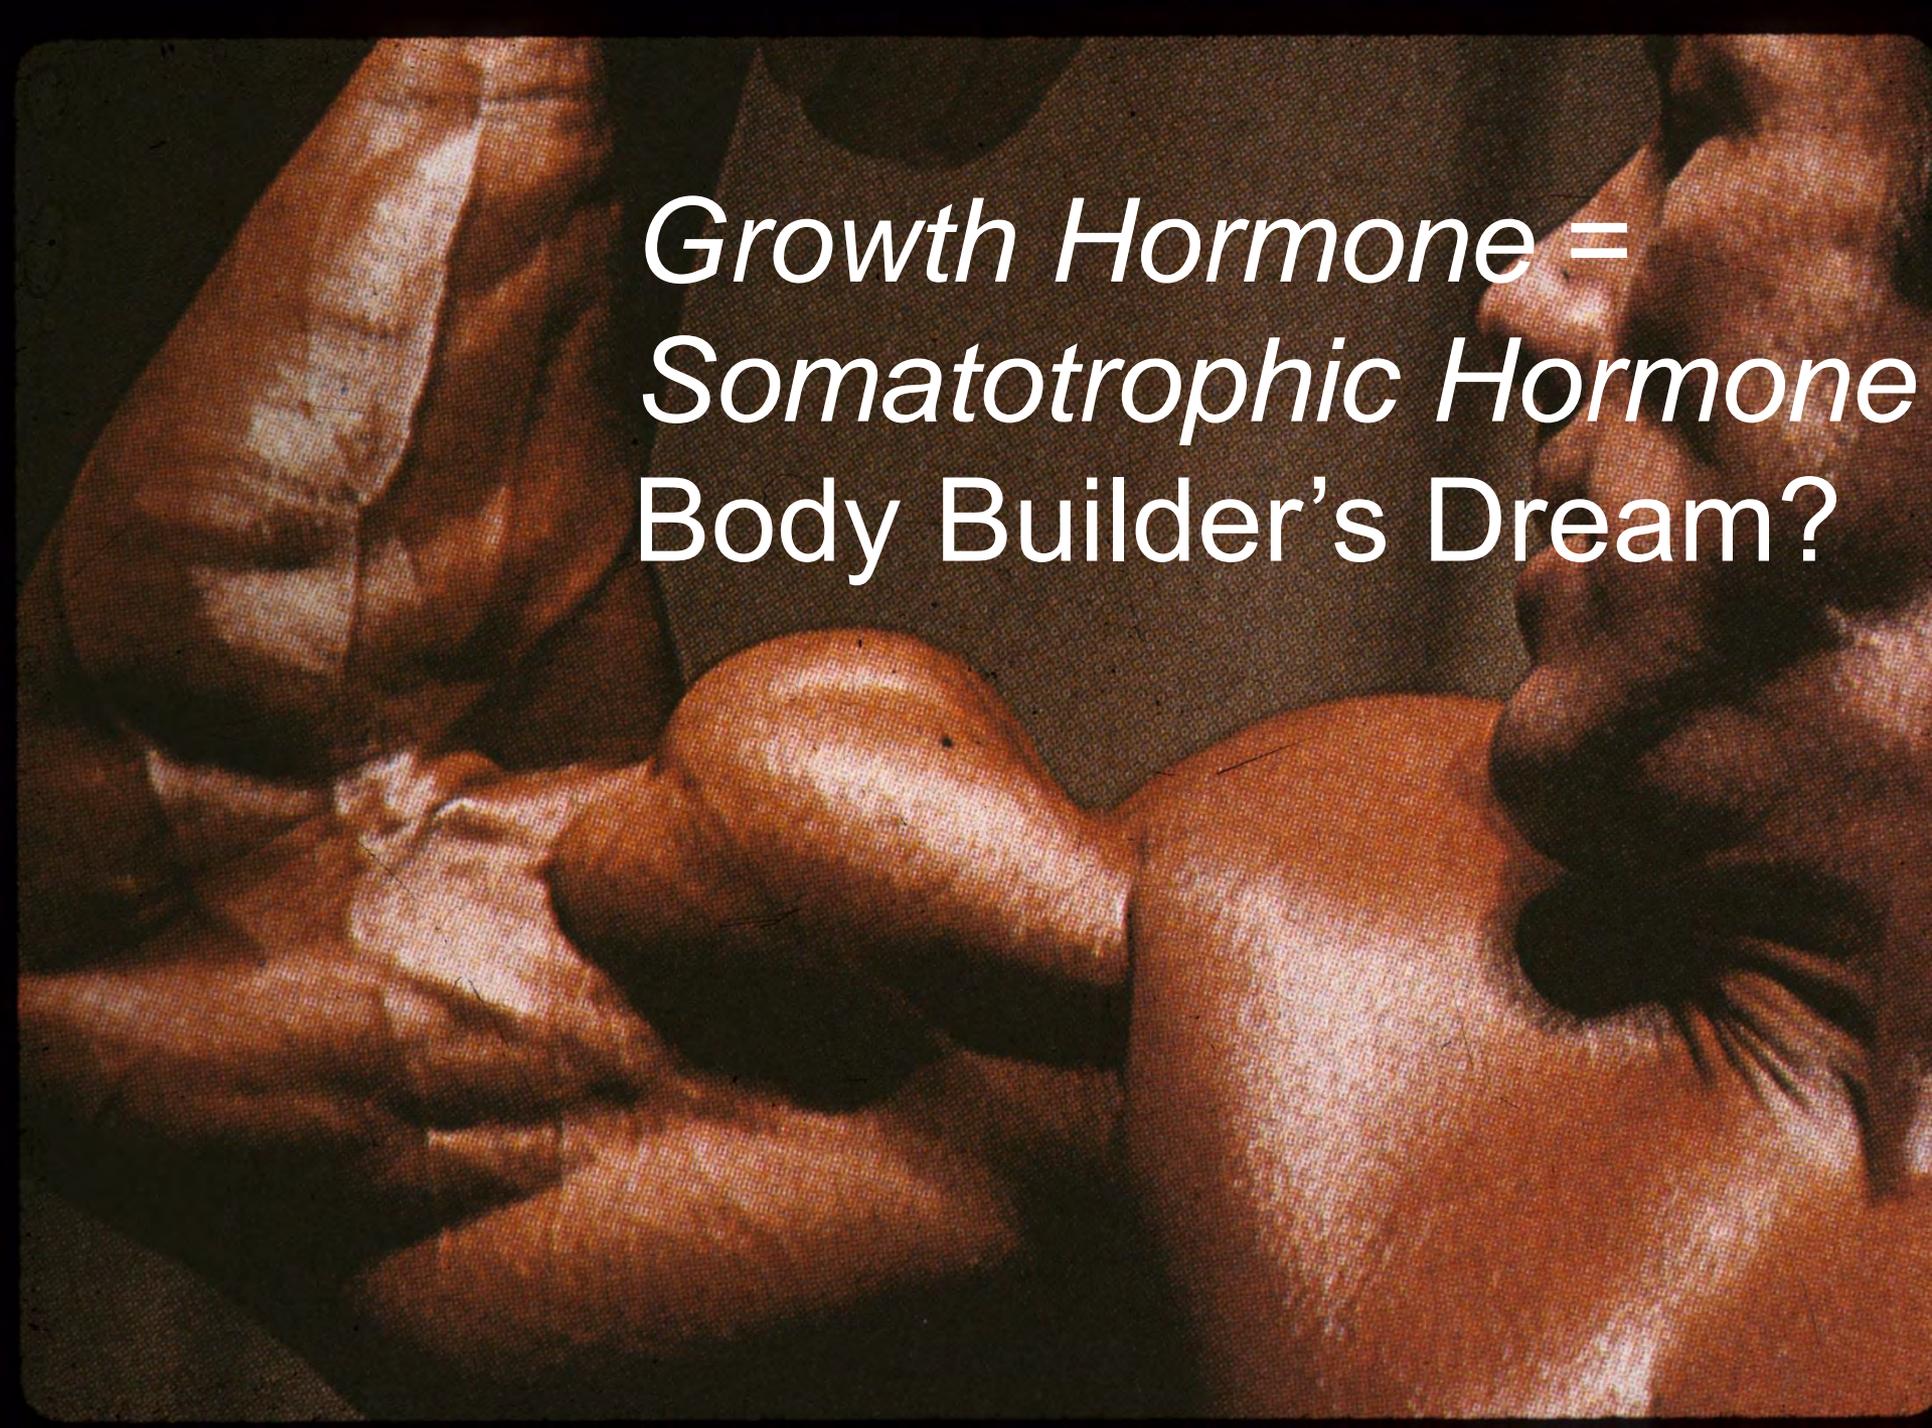

LS 2006, cf: LS 2012  
fig 17-10

*Growth Hormone =  
Somatotrophic Hormone  
Body Builder's Dream?*

# ***GH/STH Effects: Insulin Resistance/Type II Diabetes?***

↑ Amino Acid uptake & Protein synthesis

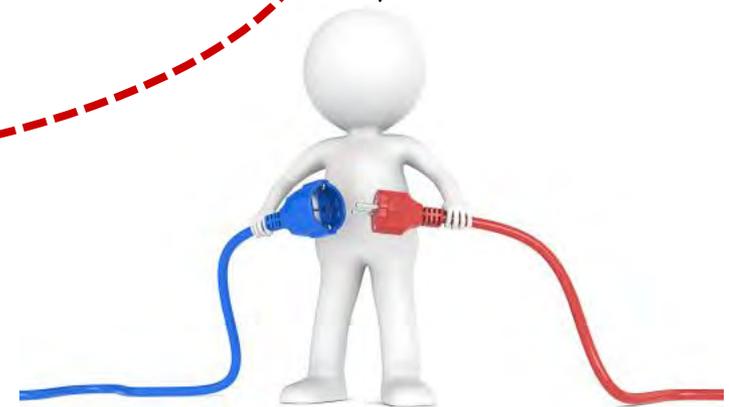

↑ Lipolysis & Fatty Acid mobilization

↓ Glucose uptake  
(skeletal muscle & adipocytes)

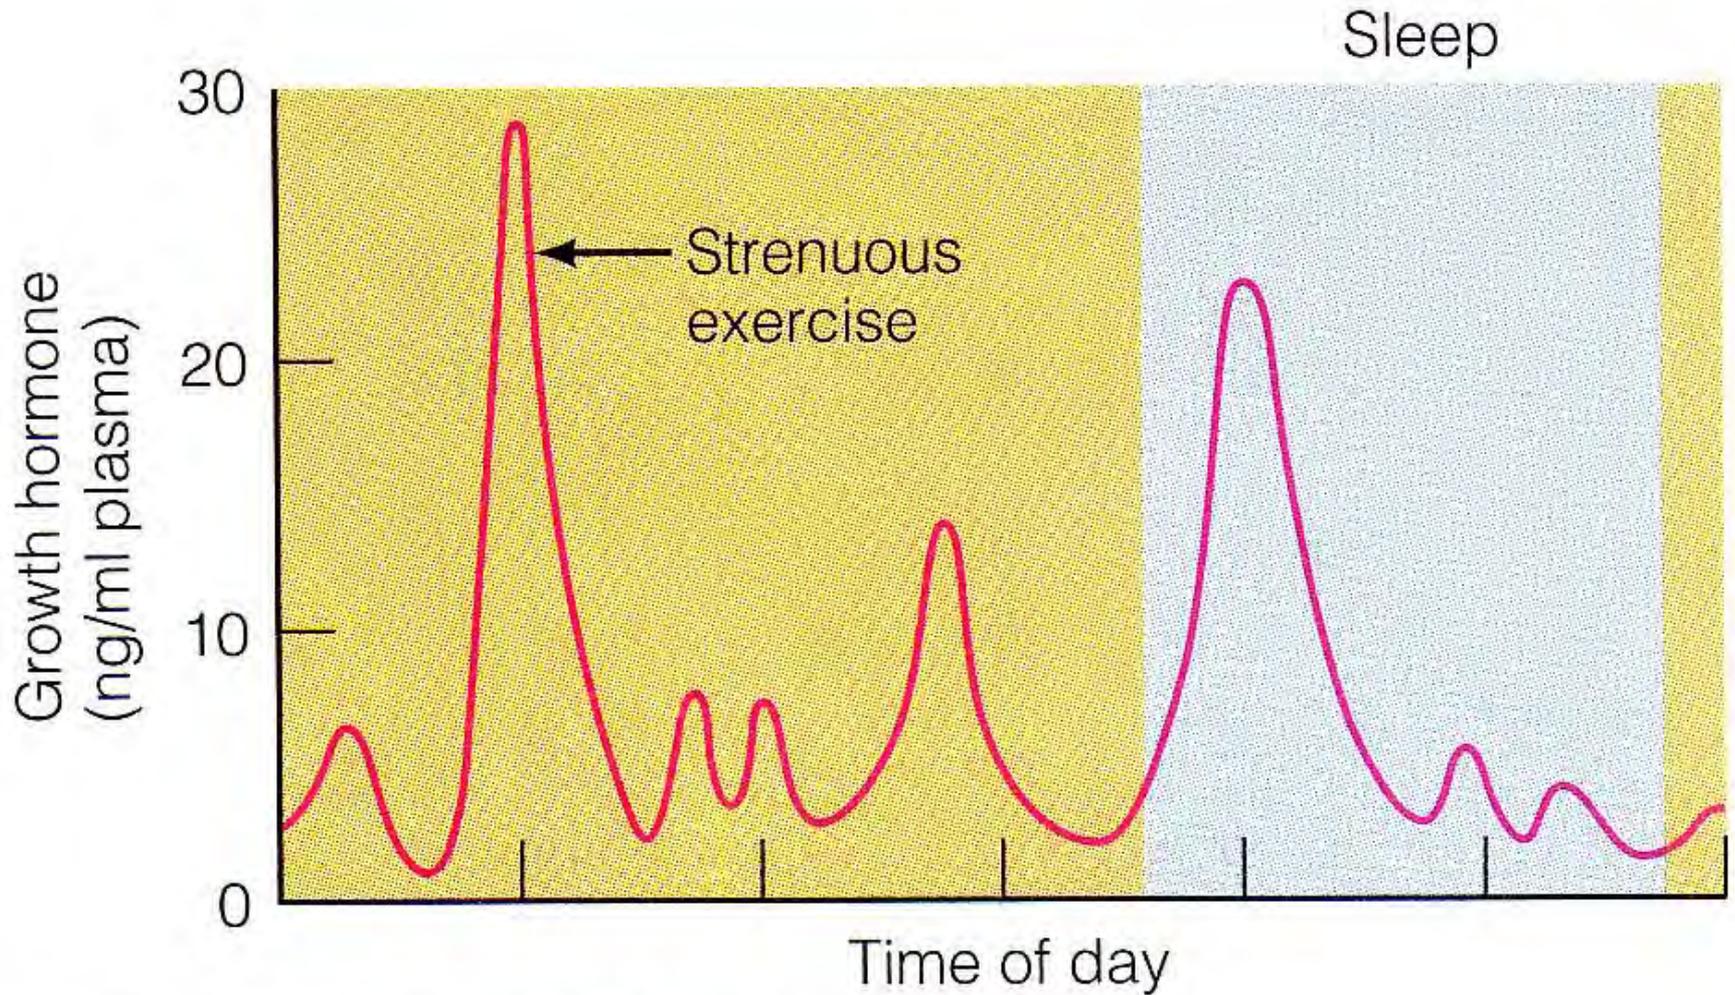

↑ Glucose production  
(liver glycogenolysis)

↑ Insulin secretion

Mismatch!!

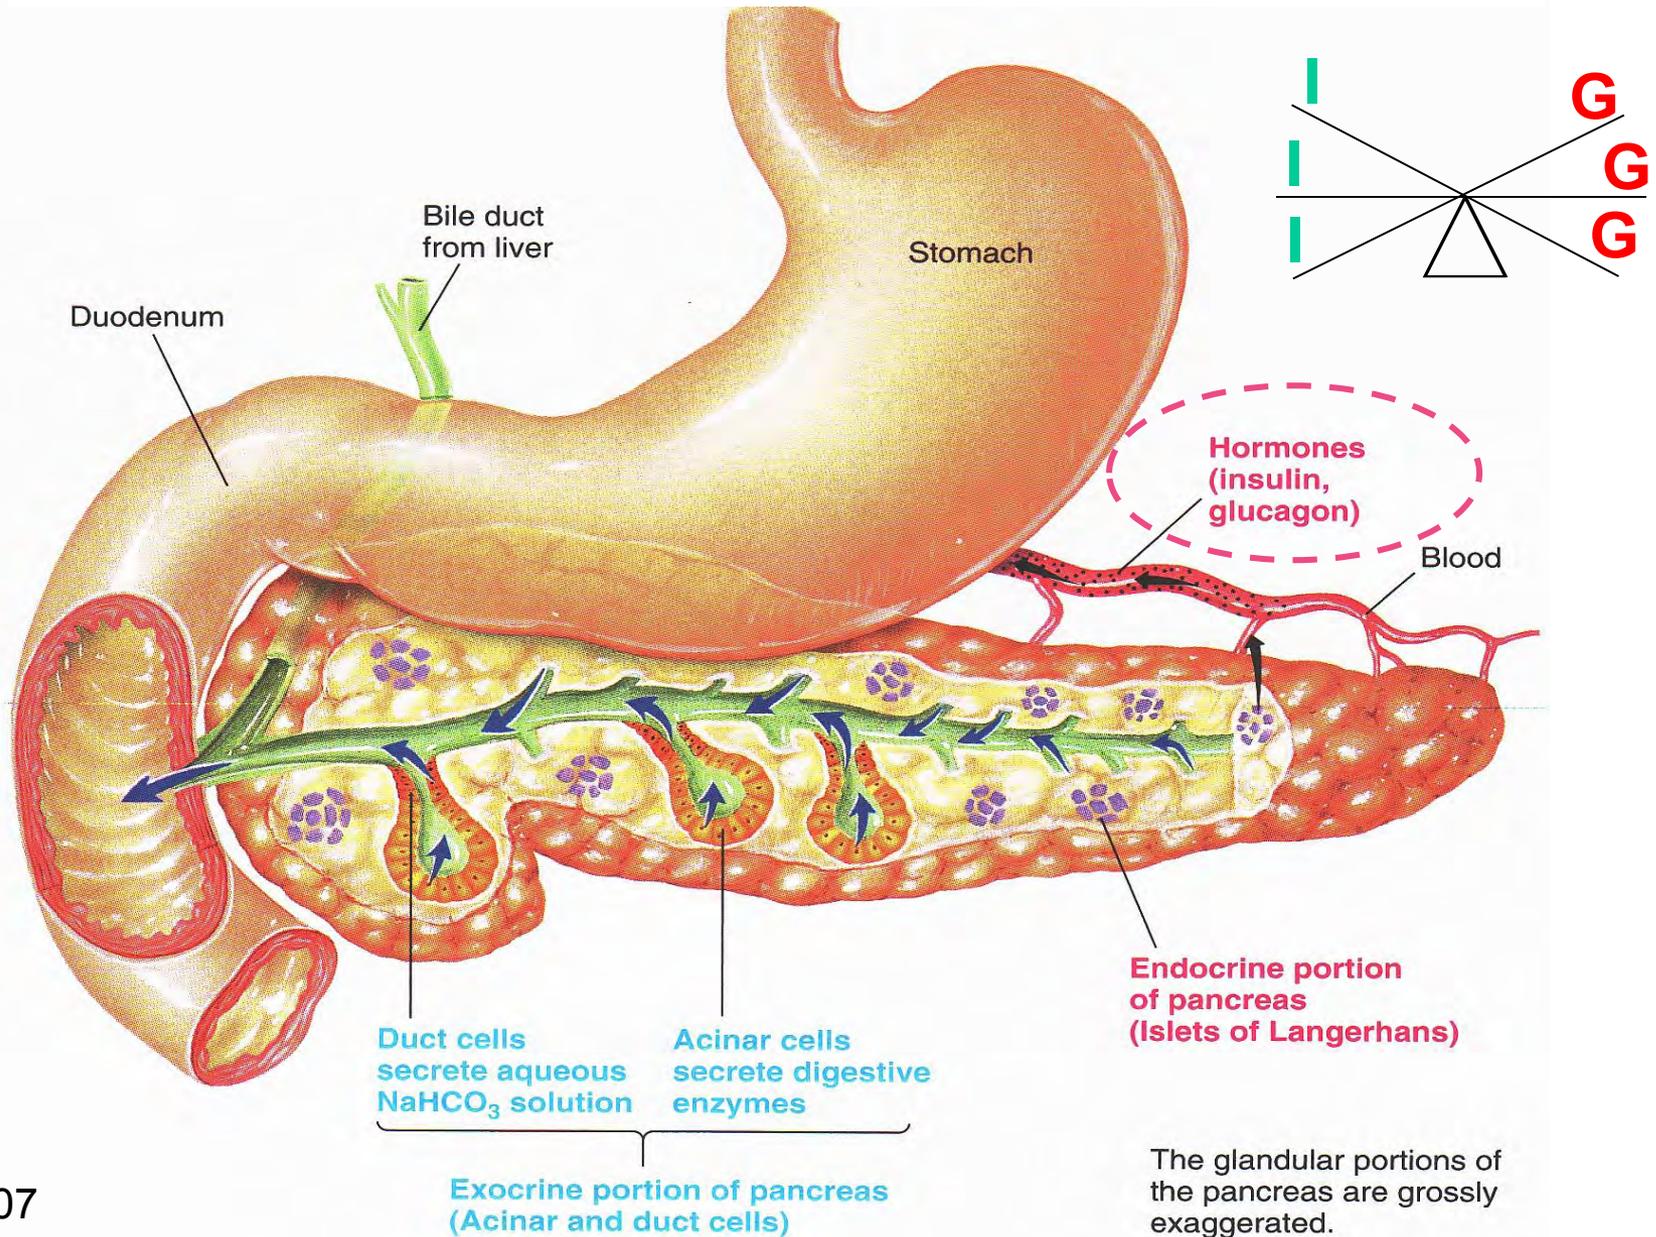

# *Increase GH naturally with exercise & sleep!!*

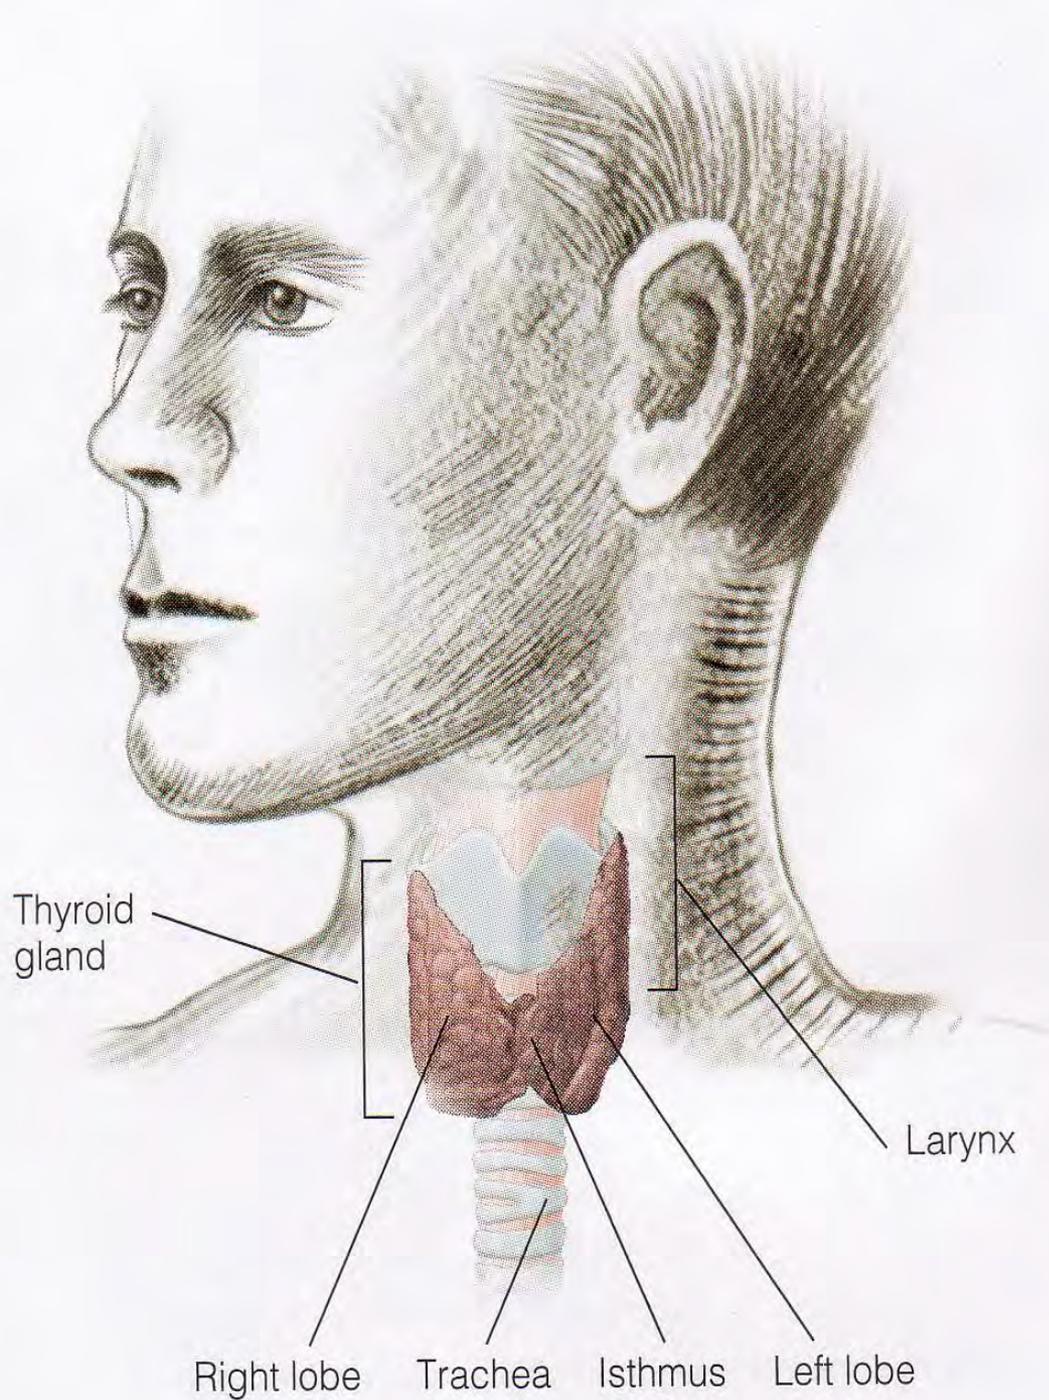

ng/ml = nanograms per milliliter

# Endocrine Pancreas: Insulin (I) & Glucagon (G) See-Saw Hormones in Regulating Blood Glucose

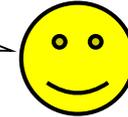

The glandular portions of the pancreas are grossly exaggerated.

## BI 121 Lecture 12

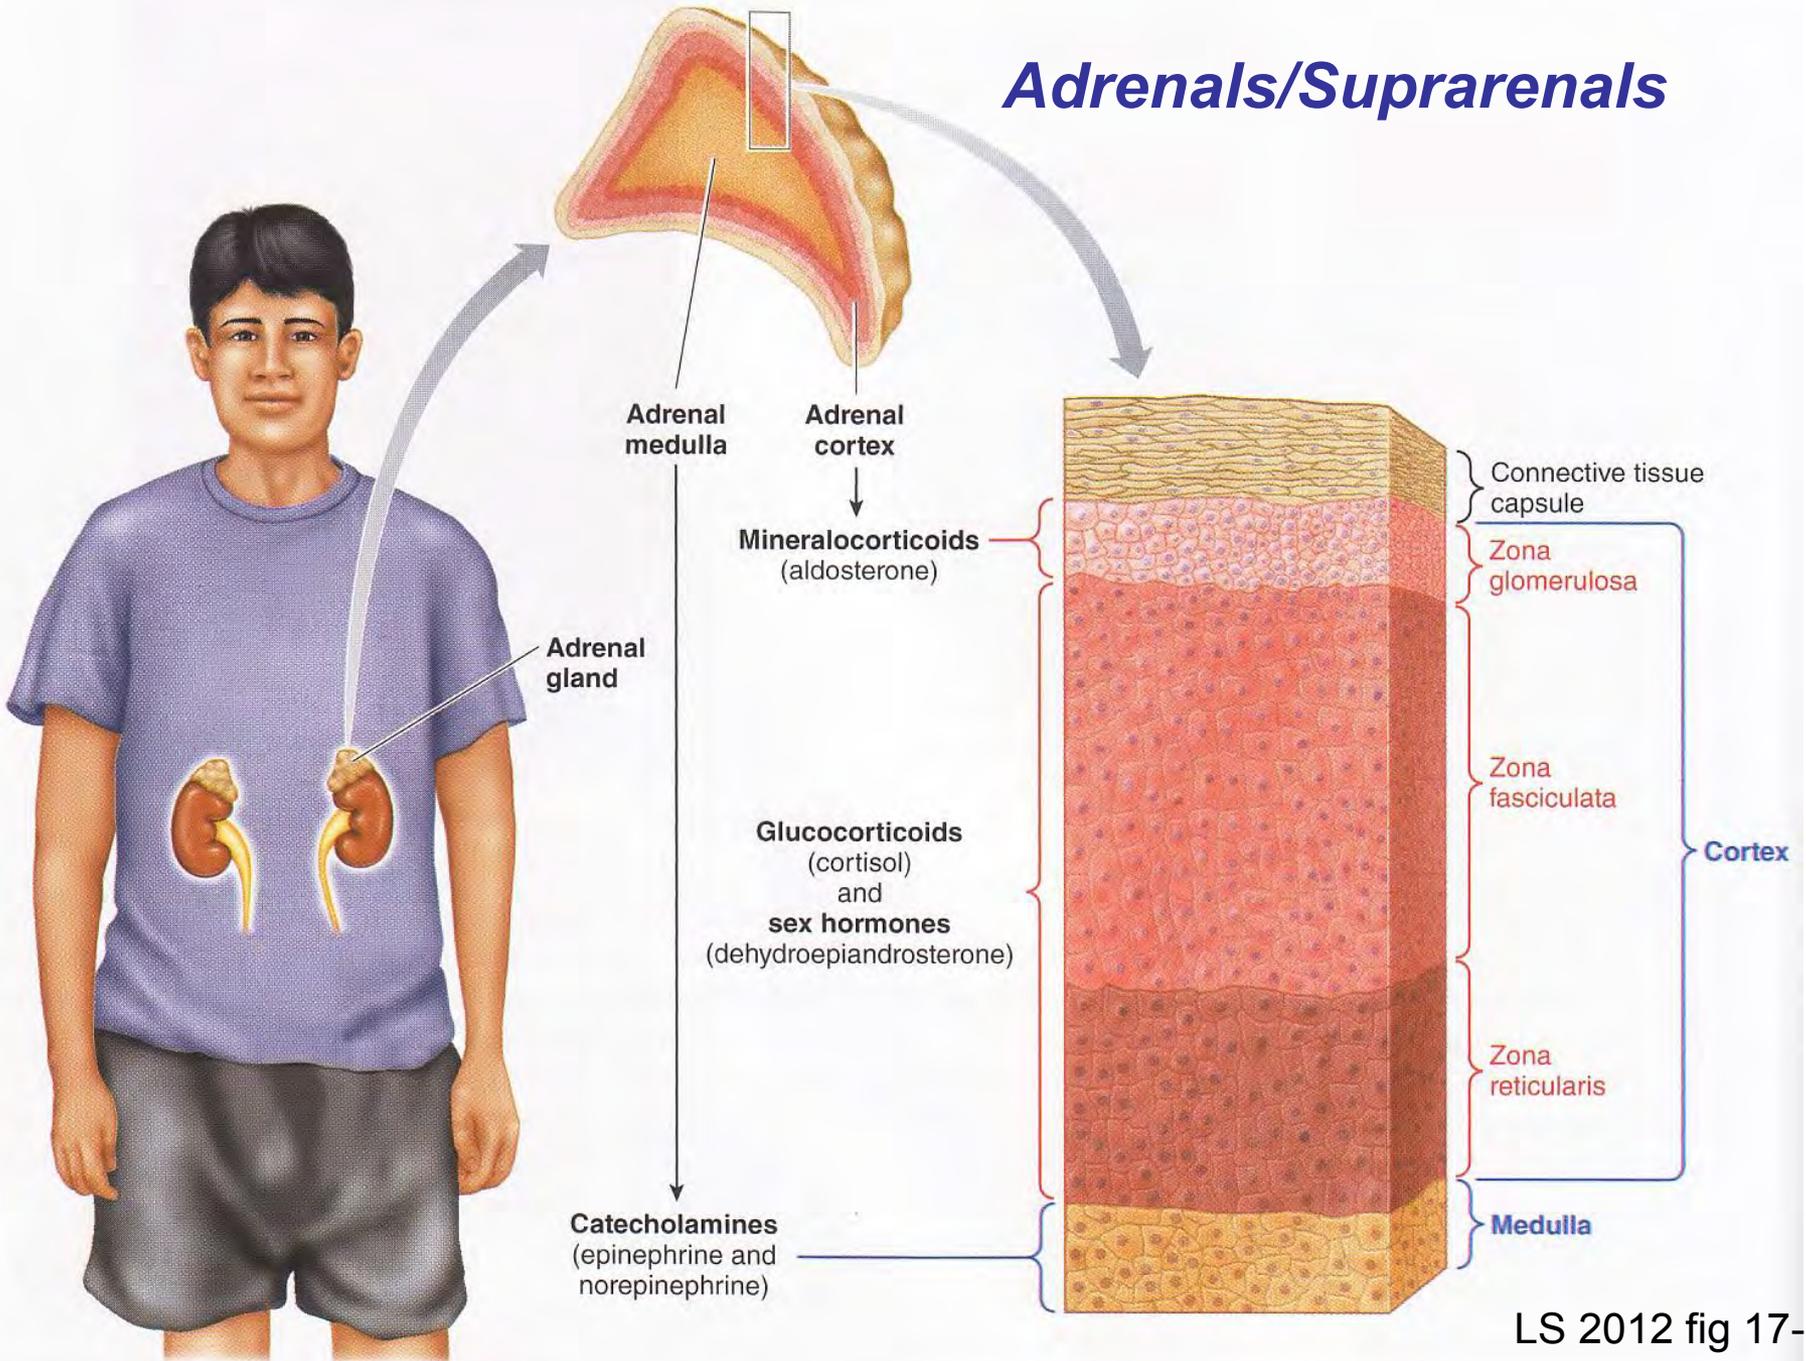

Thanks to you, Katie, Kelsey,  
Steph, Janelle & Patrick!

For your effort  
& your 🩸 !!

- I. Announcements** Thanks for your help with blood lab! Great job! No lab this week. Study for Exam II, Dec 7, Thurs, 8 am!
- II. Endocrine Connections** Peripheral Endocrine Organs...  
Adrenals. Q? DC Module 13 p 109-13, LS ch 17 pp 513-36
- III. Introduction to the Nervous System** LS ch 5, DC Module 9
  - A. How is the nervous system organized? LS fig 5-1 DC p 67
  - B. Neurons? What kind? Classes? Velocity? LS fig 5-2, 5-4
  - C. What's myelin? How does it help? DC fig 9-3, LS pp 83-5
  - D. Brain structure & function DC fig 9-6 thru 9-10 pp 71-5 +...
  - E. **Protect your head with a helmet!** Bicycle head injury statistics, *NHTSA & BHSI* from 2013 & 2014
- IV. Autonomic Nervous System** LS ch 7 pp 178-85+...
  - A. Sympathetic vs Parasympathetic branches LS fig 7-3
  - B. Neurotransmitters & receptors LS fig 7-1 & 7-2, tab 7-2
  - C. Actions LS tab 7-1
  - D. Fight-or-flight stories!

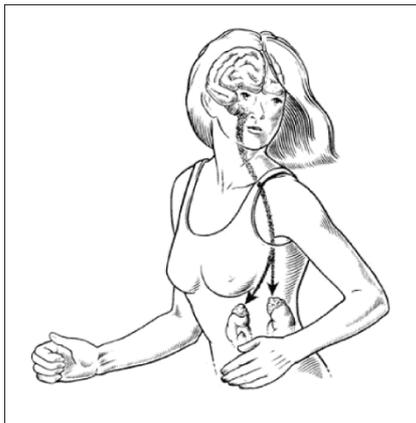

# Adrenals/Suprarenals

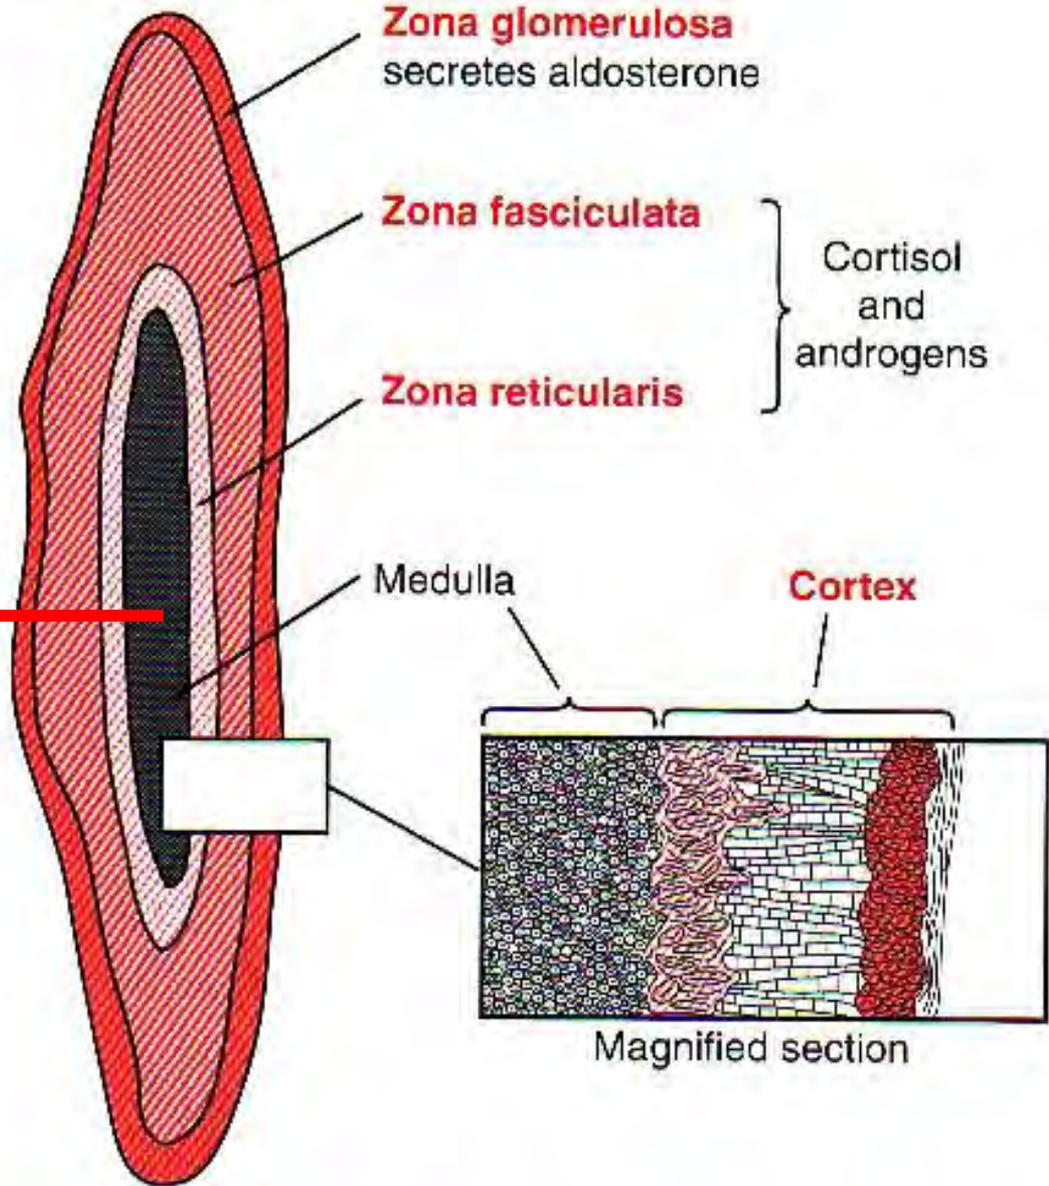

BI 121!!

**Epinephrine**  
**80%**  
**Norepinephrine**  
**20%**

**★ 300 million axons enable R & L hemisphere cross-talk!!**

I'm gonna smash Exam II because  
— I'm dedicated & I ♥ physiology!

## BI 121 Lecture 13

### I. Announcements **No lab today – Study for Exam II!!**

Optional Lab notebook check after last Lab 6, Mac pulmonary function testing (PFT) next Thursday. Q?

### II. CNS Connections Myelin, brain + spinal cord (CNS)

**Protect your head with a helmet!** Bicycle head injury statistics *NHTSA & BHSI, 2014 data*

### III. Peripheral Nervous System LS sections of ch 3, 4, & 7

A. Autonomic NS: Branches, neurotransmitters, receptors, actions, fight-or-flight stories ch 7 pp179-85

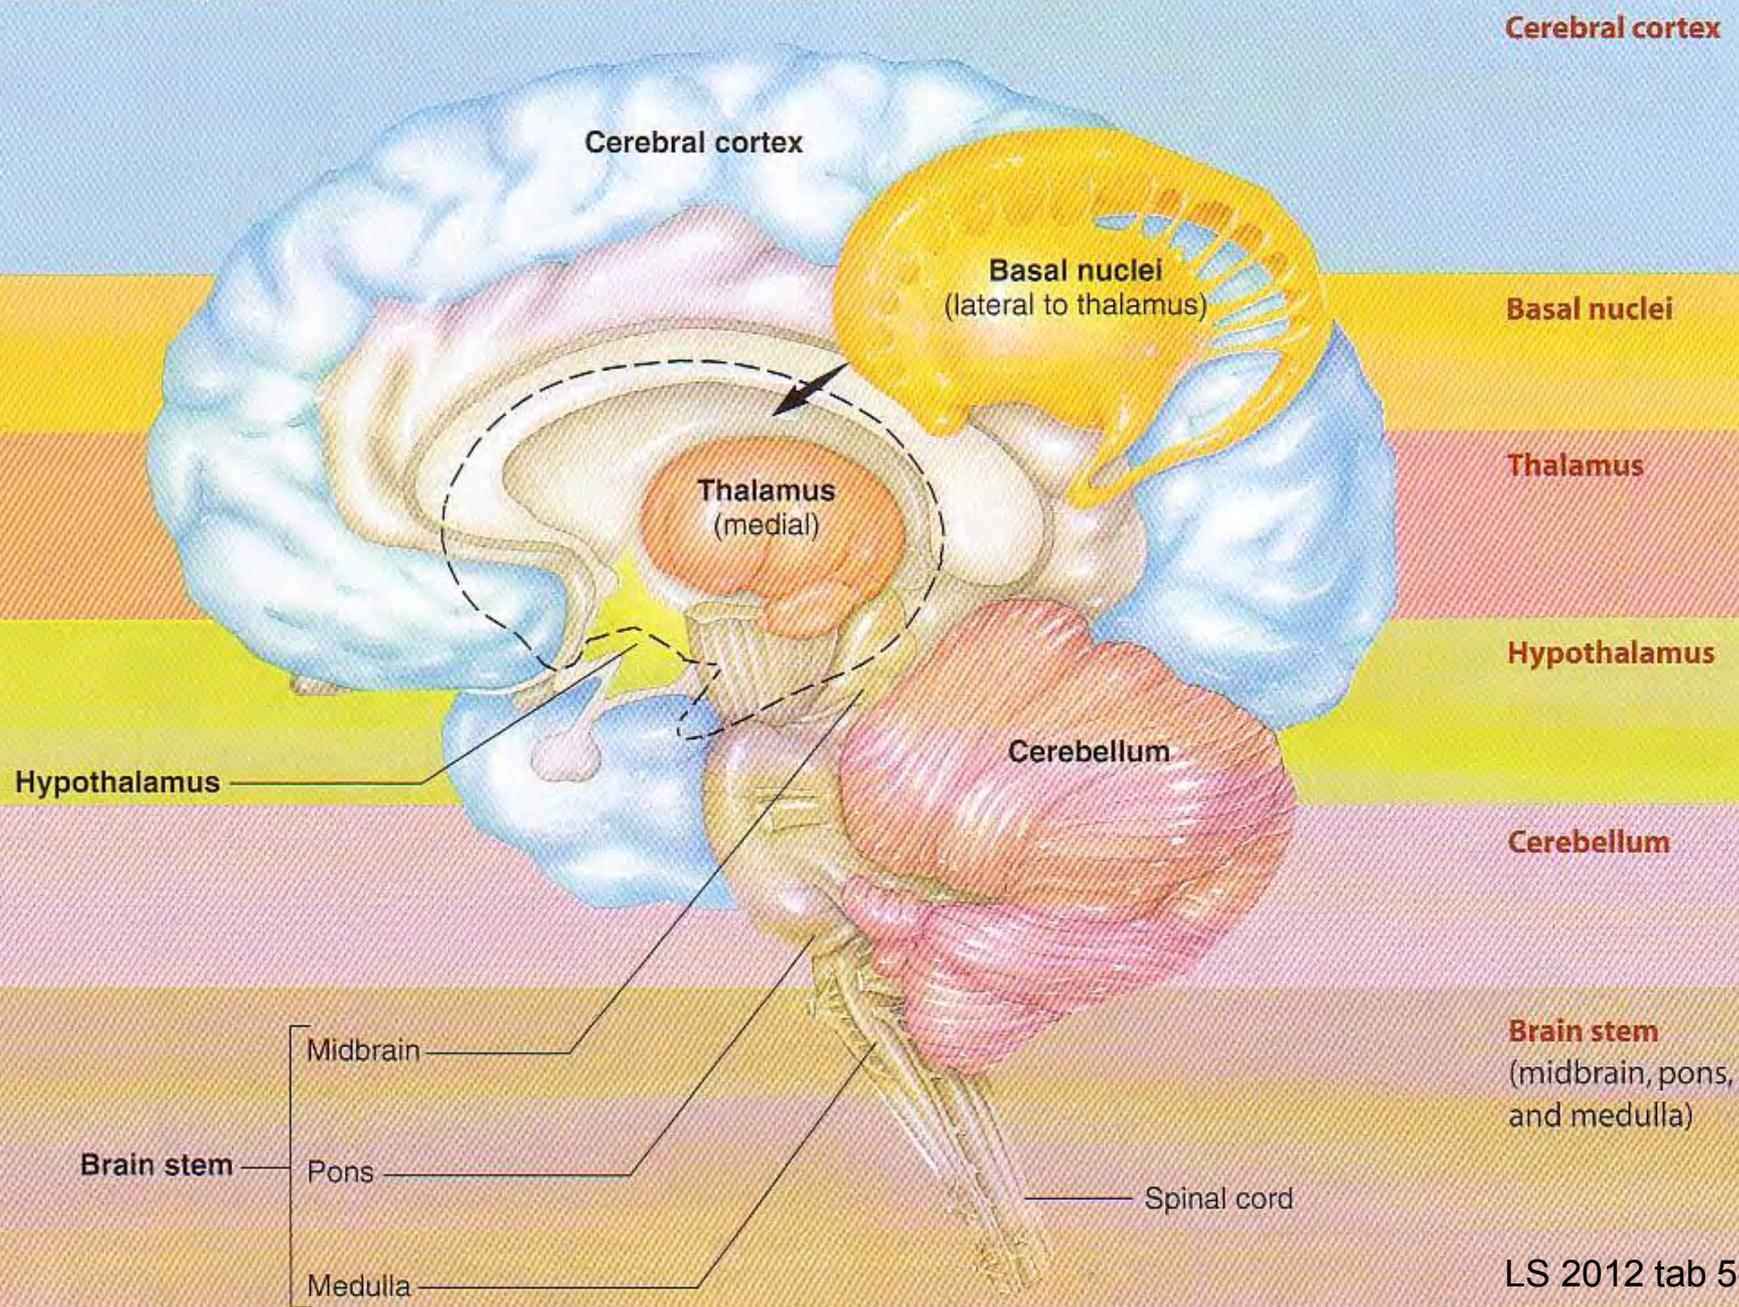

B. Why are nerve & muscle unique? ch 4 p 71

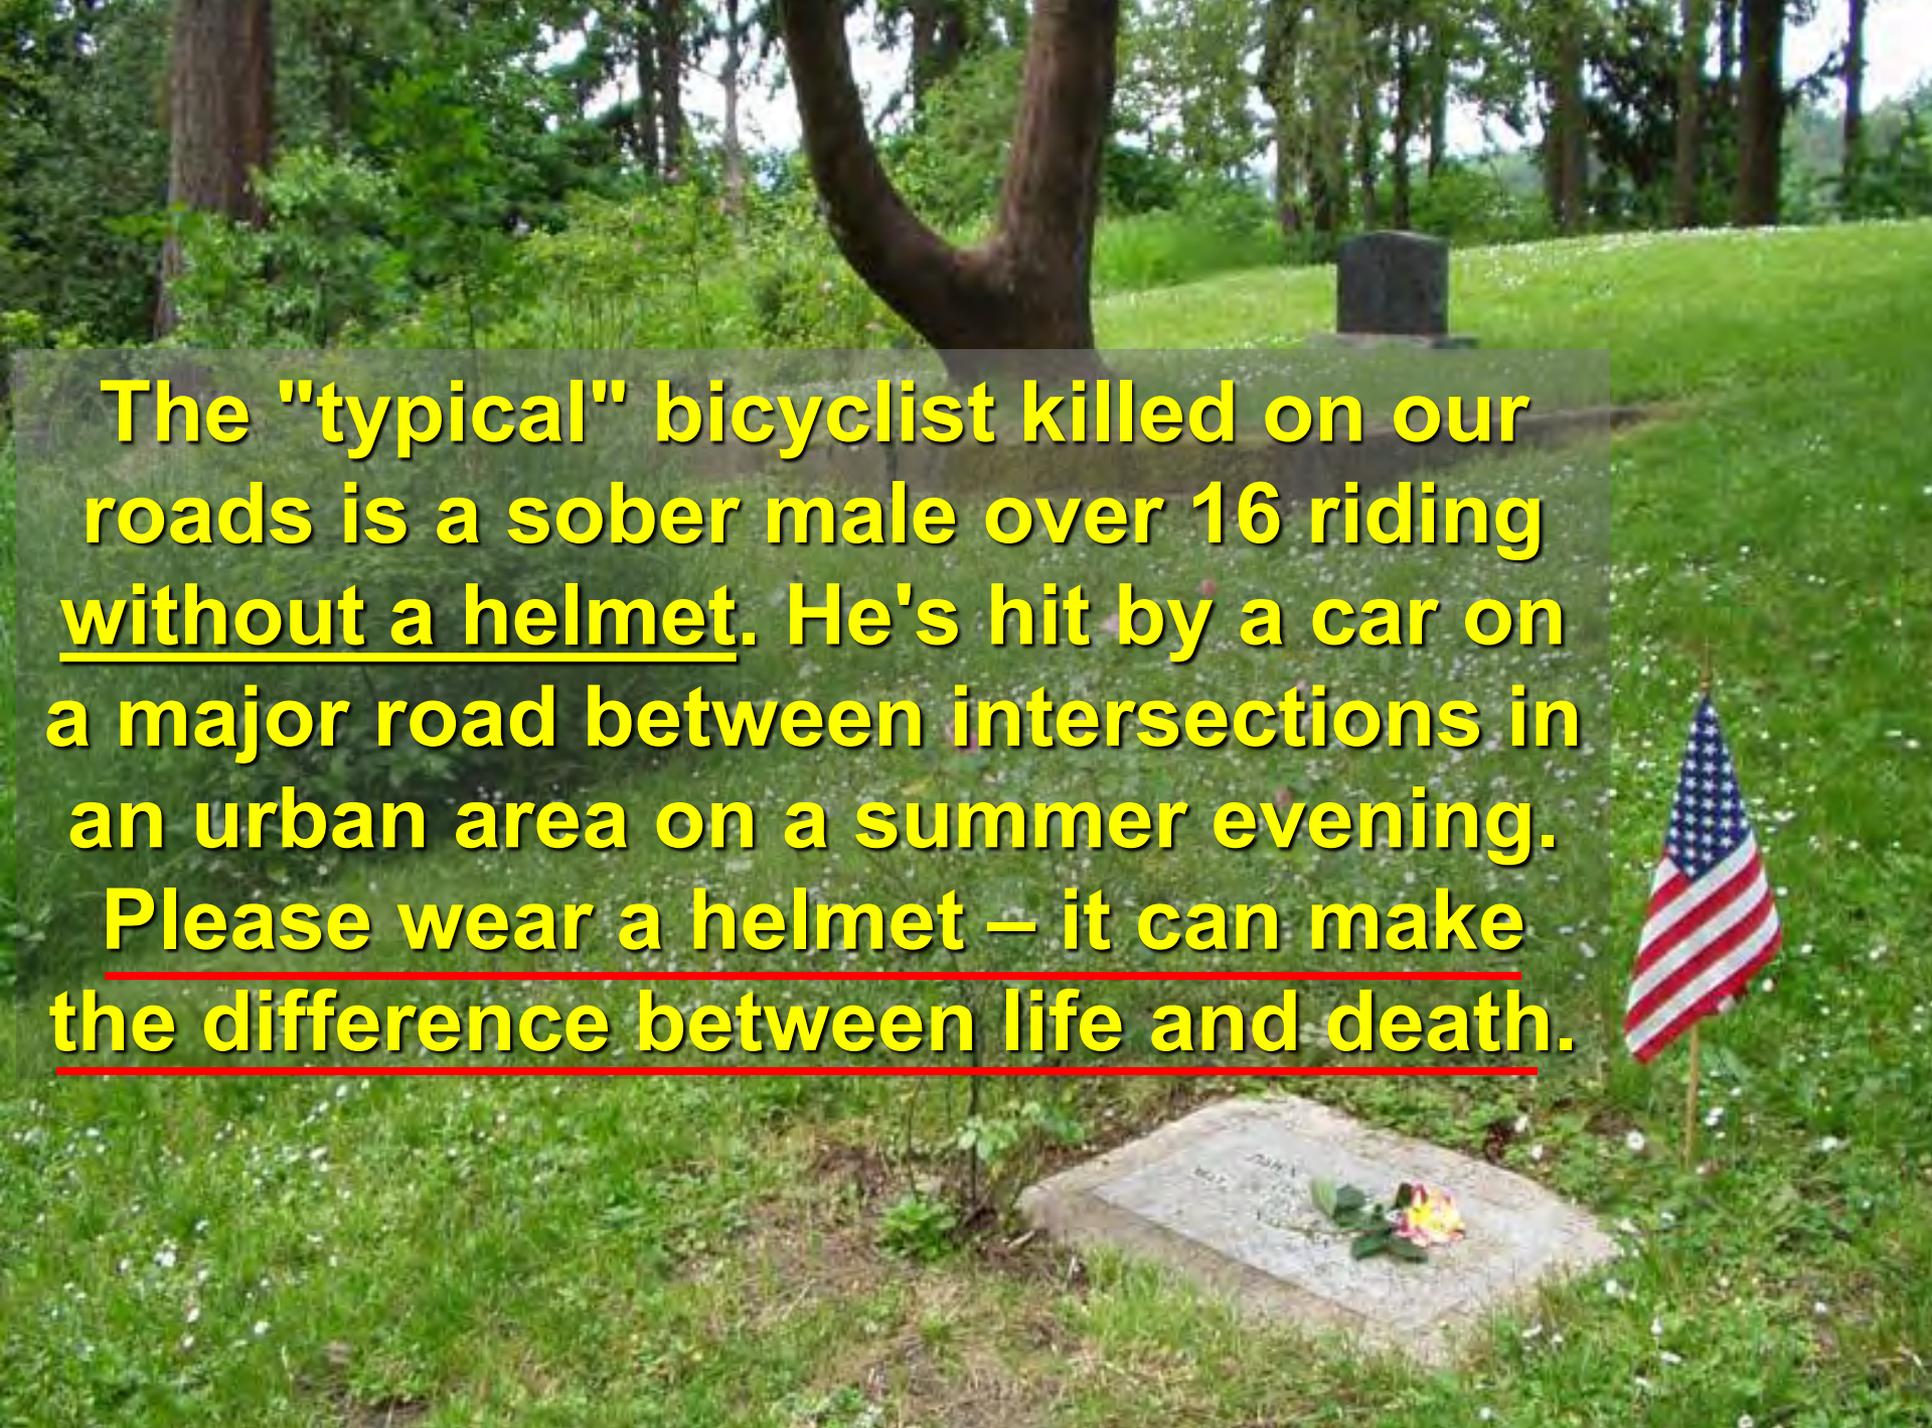

C. How do excitable cells signal? ch 3 pp62-7; ch 4 pp74-83

D. How does the signal cross the nerve-muscle gap?  
ch 7 p 185-92 fig 7-5 p 190

1. Ca<sup>2+</sup> bones!...but what else? p 190

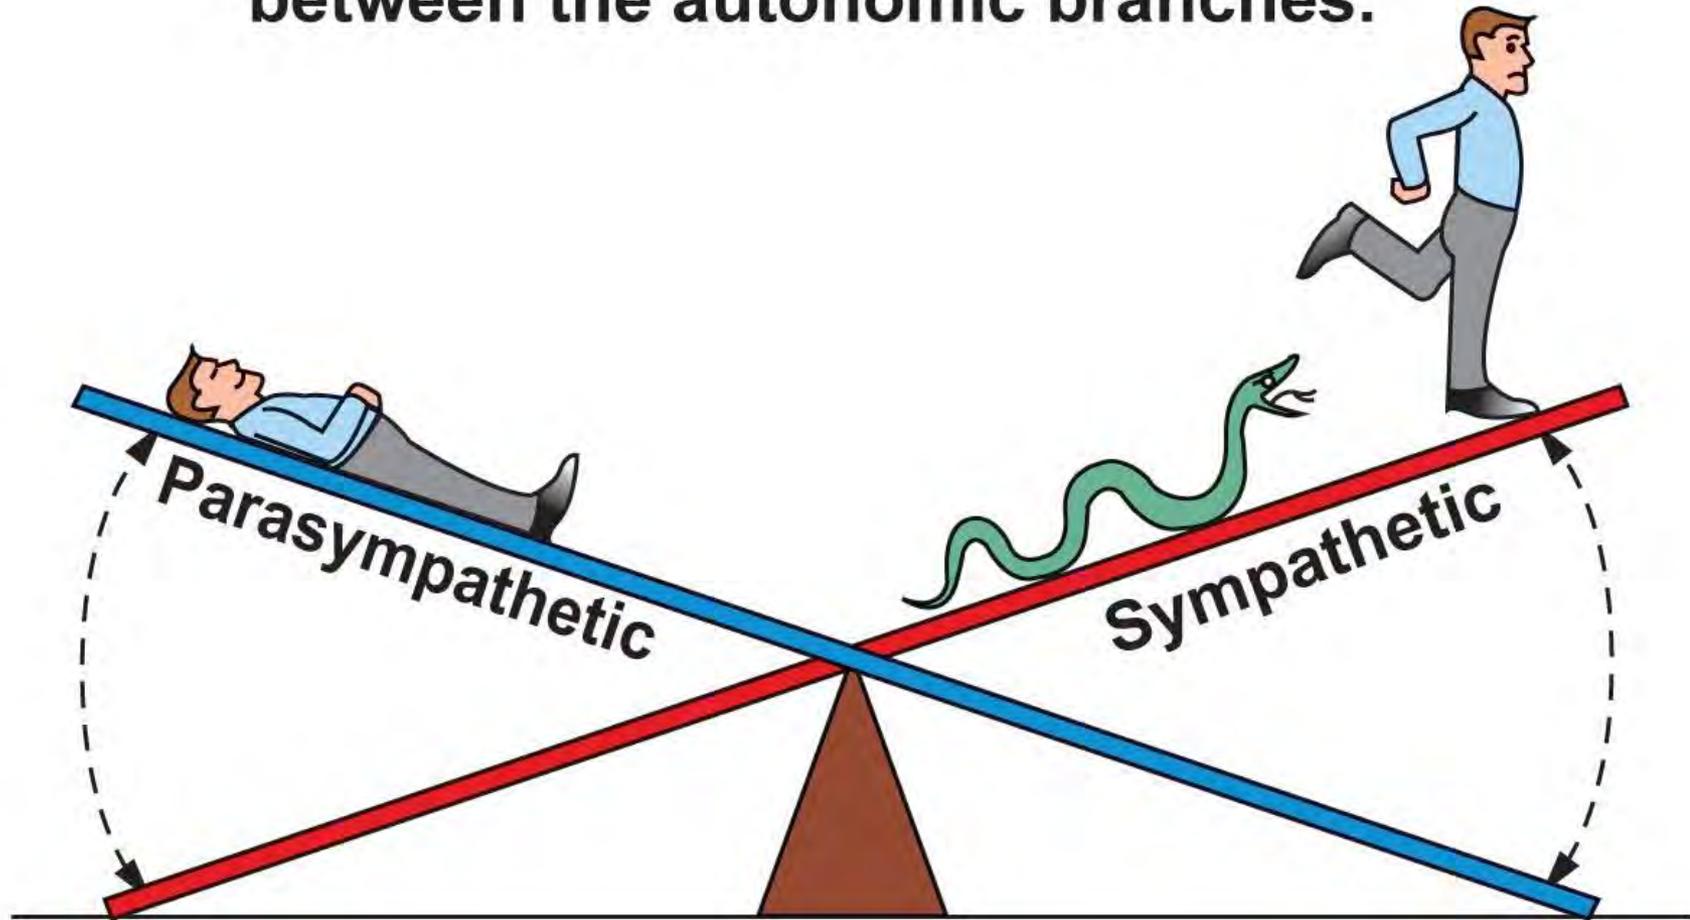

2. What do black widow spider venom, botulism, curare & nerve gas have in common? Botox pp 189-92

A photograph of a cemetery. In the foreground, there is a low, rectangular gravestone with a small bouquet of colorful flowers placed on it. To the right of the gravestone, a small American flag is planted in the grass. In the background, a large, dark tree trunk is visible, and further back, another gravestone stands on a grassy slope. The scene is set in a lush, green environment with many trees.

**The "typical" bicyclist killed on our roads is a sober male over 16 riding without a helmet. He's hit by a car on a major road between intersections in an urban area on a summer evening. Please wear a helmet – it can make the difference between life and death.**

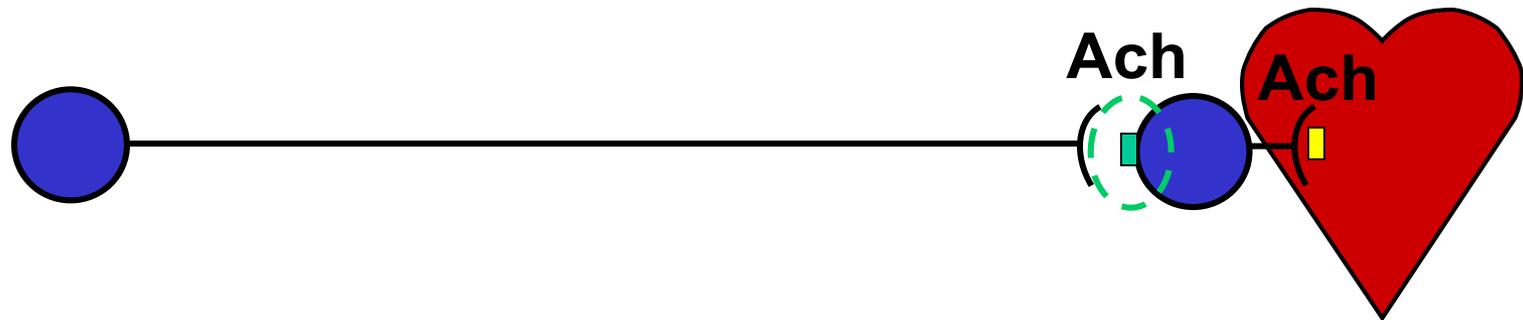

Homeostasis is a dynamic balance between the autonomic branches.

**Rest-and-digest:  
Parasympathetic  
activity dominates.**

**Fight-or-flight:  
Sympathetic activity  
dominates.**

## *Parasympathetic*

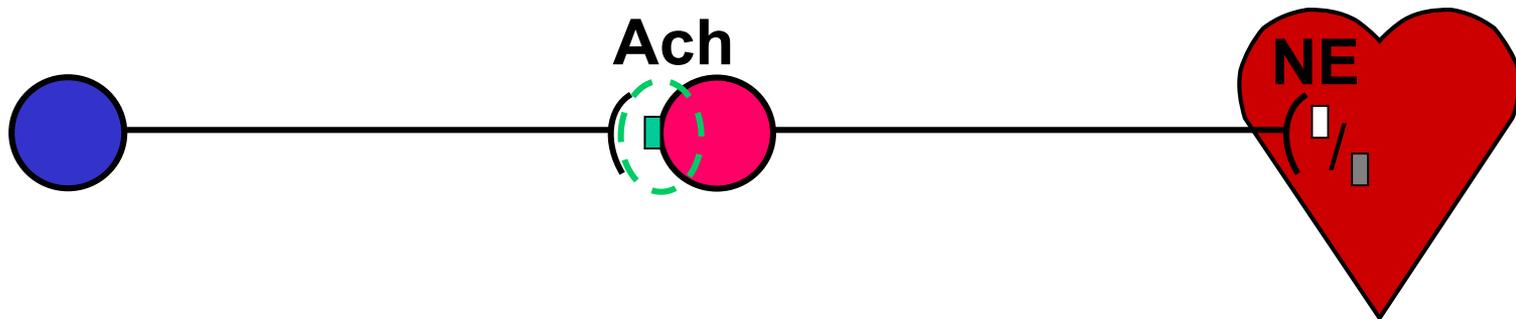

Ach = Acetylcholine

■ = Nicotinic Receptor

■ = Muscarinic Receptor

## *Sympathetic*

NE = Norepinephrine

□ =  $\alpha$  Receptor ( $\alpha_1$ ,  $\alpha_2$ )

■ =  $\beta$  Receptor ( $\beta_1$ ,  $\beta_2$ )

**Nicotine activates both Sympathetic & Parasympathetic post-ganglionic neurons!**

**Problem?**

**Like hammering the gas pedal & brake at the same time!!**

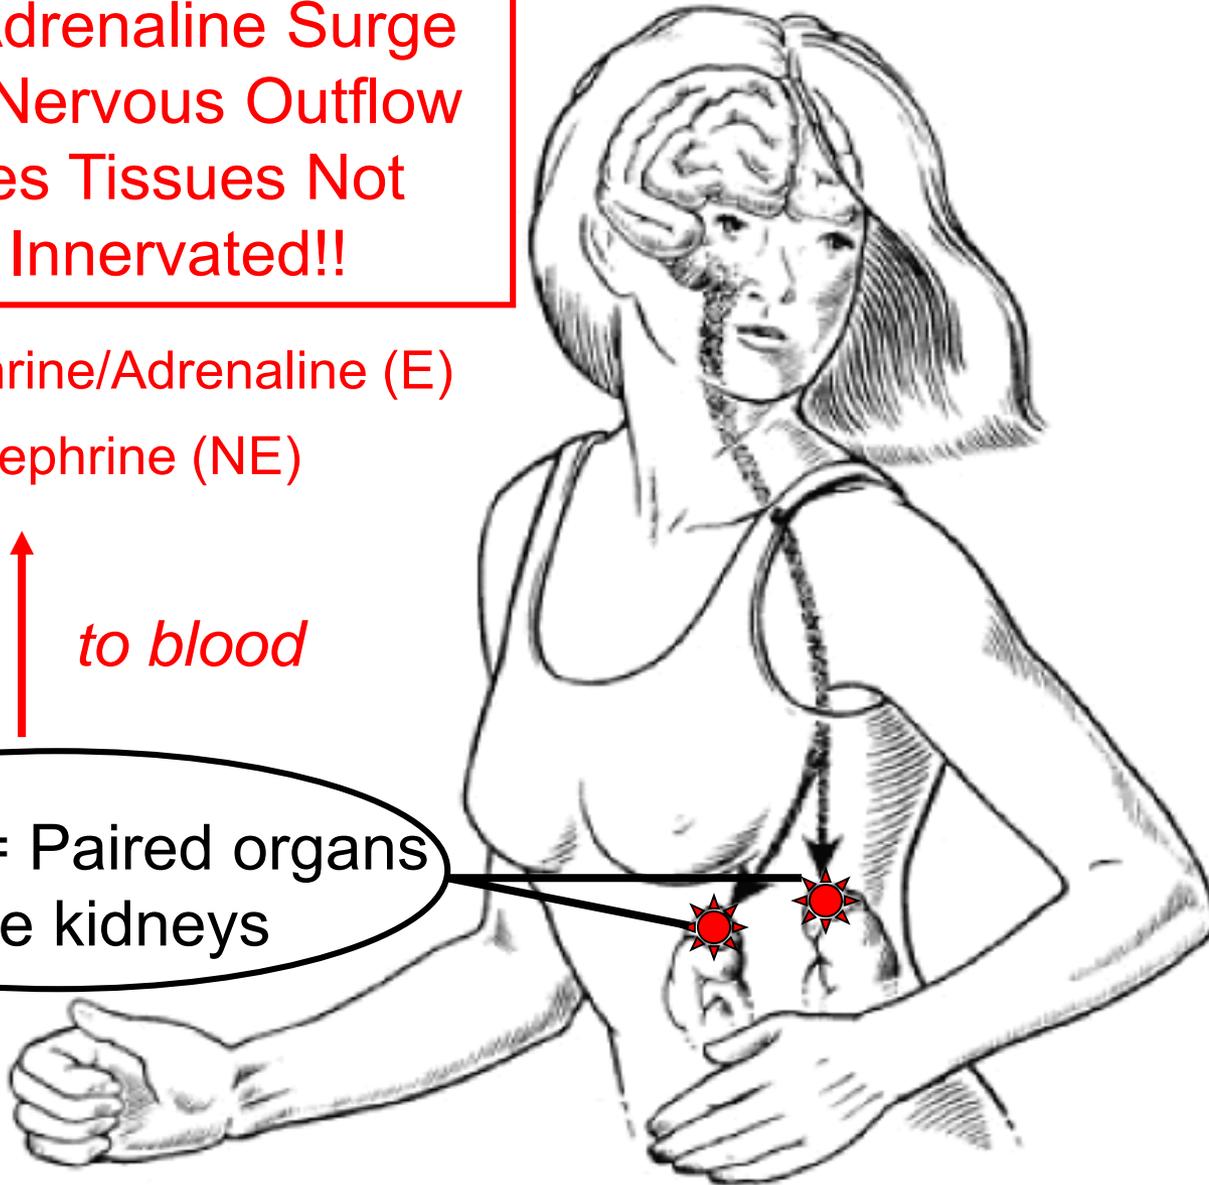

Hormonal Adrenaline Surge  
Reinforces Nervous Outflow  
& Accesses Tissues Not  
Directly Innervated!!

80% Epinephrine/Adrenaline (E)  
20% Norepinephrine (NE)

*Output* ↑ *to blood*

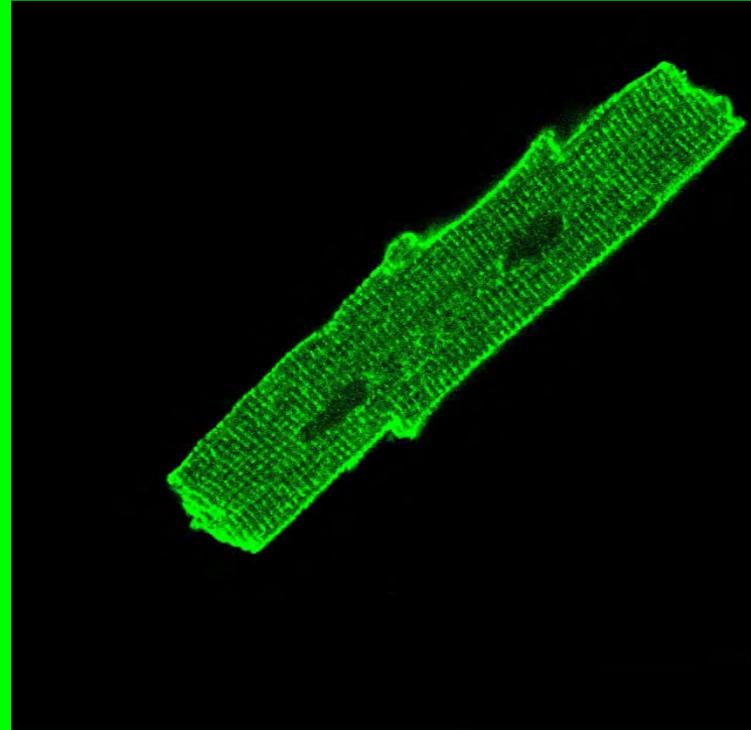

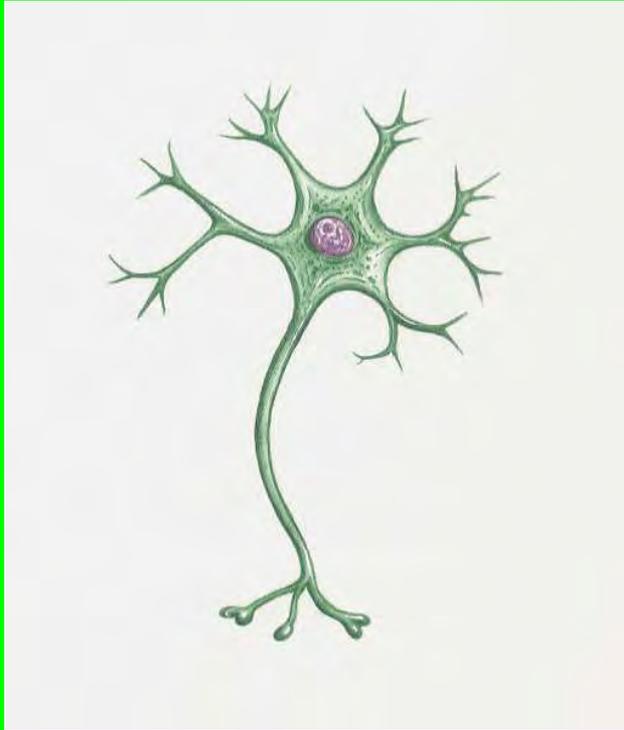

Adrenals = Paired organs  
above kidneys

## ▲ Table 7-1 Effects of Autonomic Nervous System on Various Organs

Organ	Effect of Sympathetic Stimulation	Effect of Parasympathetic Stimulation
<b>Heart</b>	Increases heart rate and increases force of contraction of the whole heart	Decreases heart rate and decreases force of contraction of the atria only
<b>Blood Vessels</b>	Constricts	Dilates vessels supplying the penis and the clitoris only
<b>Lungs</b>	Dilates the bronchioles (airways)	Constricts the bronchioles
<b>Digestive Tract</b>	Decreases motility (movement) Contracts sphincters (to prevent forward movement of tract contents) Inhibits digestive secretions	Increases motility Relaxes sphincters (to permit forward movement of tract contents) Stimulates digestive secretions
<b>Urinary Bladder</b>	Relaxes	Contracts (emptying)
<b>Eye</b>	Dilates the pupil Adjusts the eye for far vision	Constricts the pupil Adjusts the eye for near vision
<b>Liver (glycogen stores)</b>	Glycogenolysis (glucose is released)	None
<b>Adipose Cells (fat stores)</b>	Lipolysis (fatty acids are released)	None
<b>Exocrine Glands</b>		
<i>Exocrine pancreas</i>	Inhibits pancreatic exocrine secretion	Stimulates pancreatic exocrine secretion (important for digestion)
<i>Sweat glands</i>	Stimulates secretion by sweat glands important in cooling the body	Stimulates secretion by specialized sweat glands in the armpits and genital area
<i>Salivary glands</i>	Stimulates a small volume of thick saliva rich in mucus	Stimulates a large volume of watery saliva rich in enzymes
<b>Endocrine Glands</b>		
<i>Adrenal medulla</i>	Stimulates epinephrine and norepinephrine secretion	None
<i>Endocrine pancreas</i>	Inhibits insulin secretion	Stimulates insulin secretion
<b>Genitals</b>	Controls ejaculation (males) and orgasm contractions (both sexes)	Controls erection (penis in males and clitoris in females)
<b>Brain Activity</b>	Increases alertness	None

# ***Why are nerve & muscle unique?***

LS 2012 fig 8-7

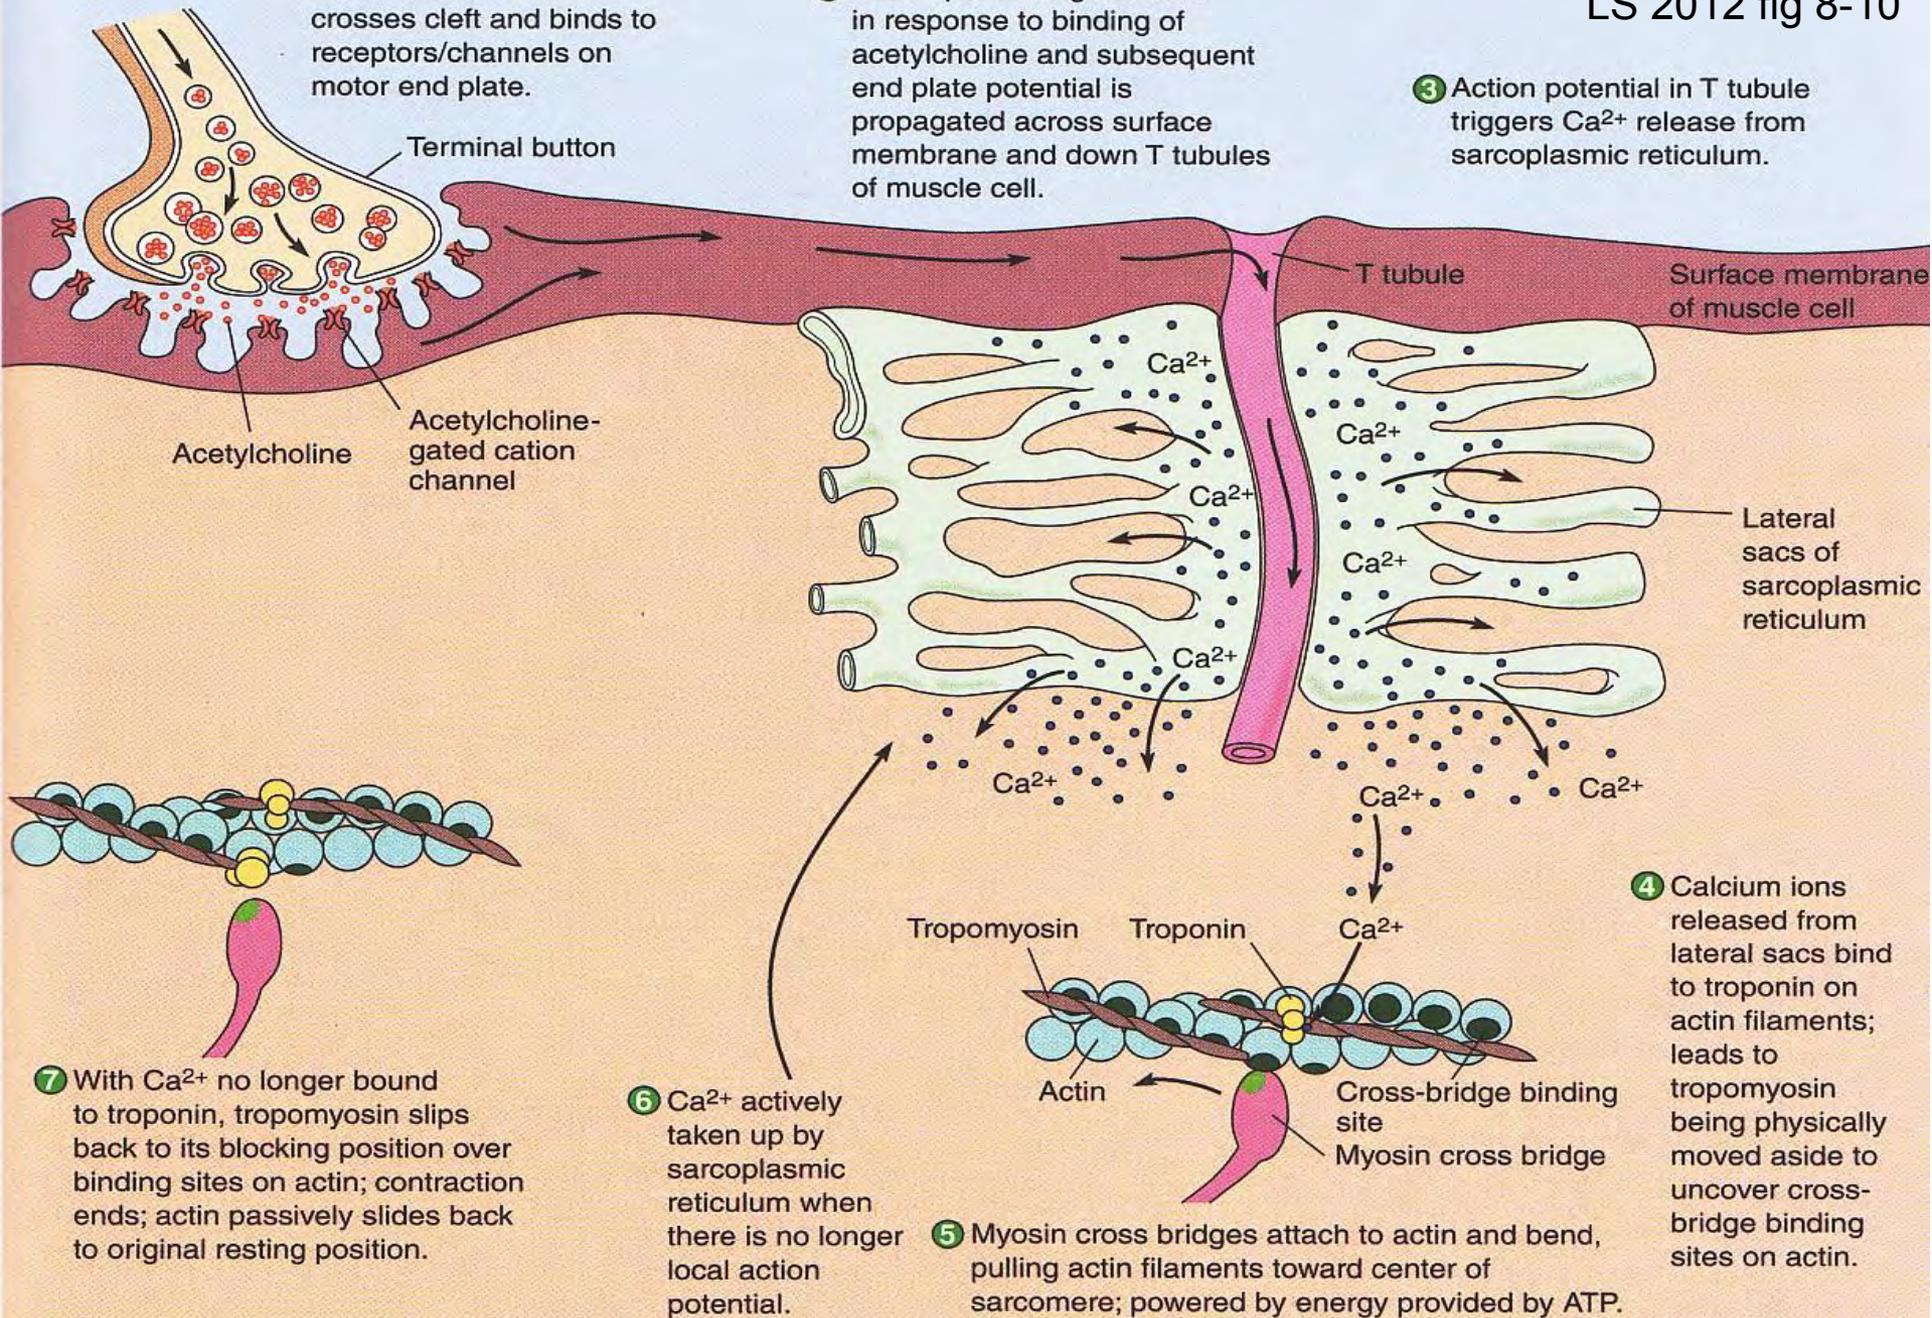

# Cross-Bridge Cycle

1 Acetylcholine released by axon of motor neuron crosses cleft and binds to receptors/channels on motor end plate.

2 Action potential generated in response to binding of acetylcholine and subsequent end plate potential is propagated across surface membrane and down T tubules of muscle cell.

3 Action potential in T tubule triggers  $\text{Ca}^{2+}$  release from sarcoplasmic reticulum.

7 With  $\text{Ca}^{2+}$  no longer bound to troponin, tropomyosin slips back to its blocking position over binding sites on actin; contraction ends; actin passively slides back to original resting position.

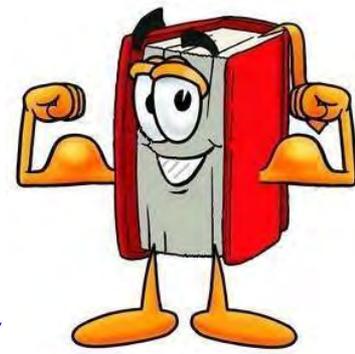

6  $\text{Ca}^{2+}$  actively taken up by sarcoplasmic reticulum when there is no longer local action potential.

5 Myosin cross bridges attach to actin and bend, pulling actin filaments toward center of sarcomere; powered by energy provided by ATP.

4 Calcium ions released from lateral sacs bind to troponin on actin filaments; leads to tropomyosin being physically moved aside to uncover cross-bridge binding sites on actin.

## 1 Breathe in & out!

## 2 Cross membranes!

## 3 Move with blood!

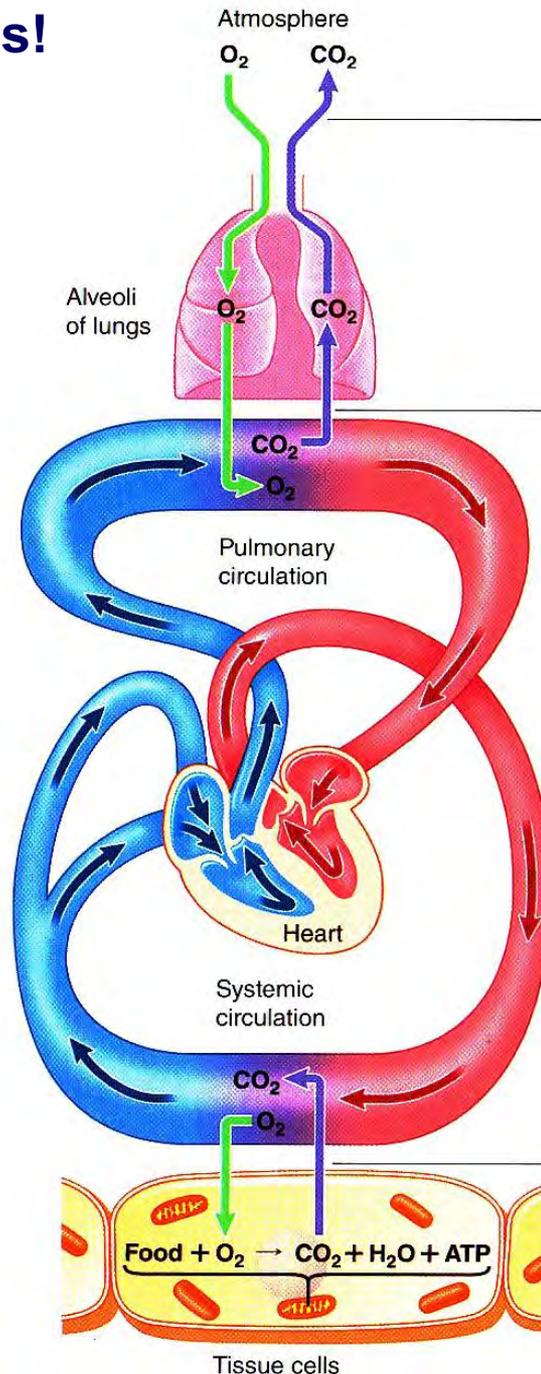

Go with the flow!

## 4 Cross membranes!

### STEPS OF EXTERNAL RESPIRATION

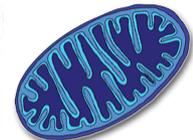

**1** Ventilation or gas exchange between the atmosphere and air sacs (alveoli) in the lungs

**2** Exchange of  $O_2$  and  $CO_2$  between air in the alveoli and the blood in the pulmonary capillaries

**3** Transport of  $O_2$  and  $CO_2$  by the blood between the lungs and the tissues

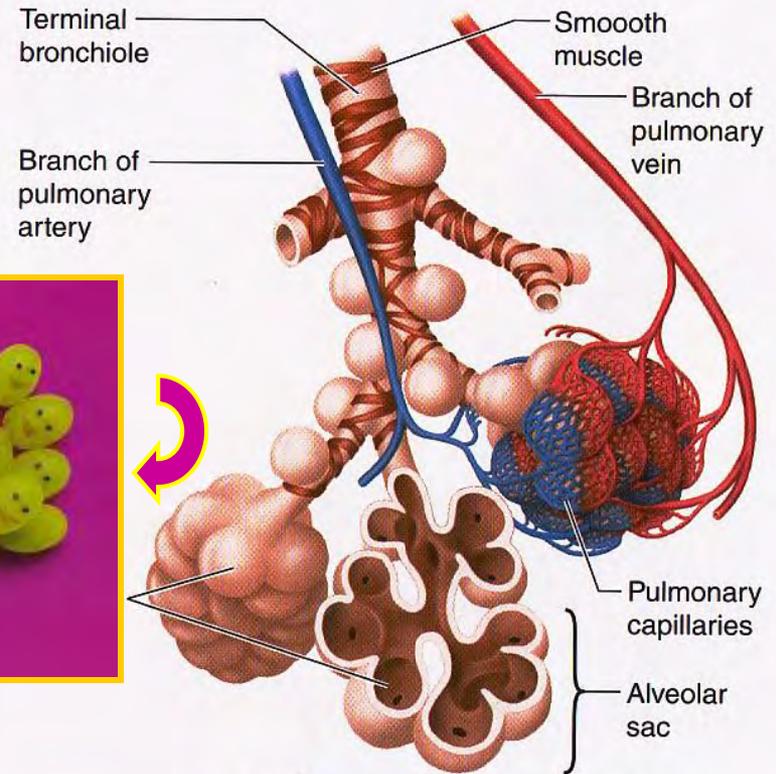

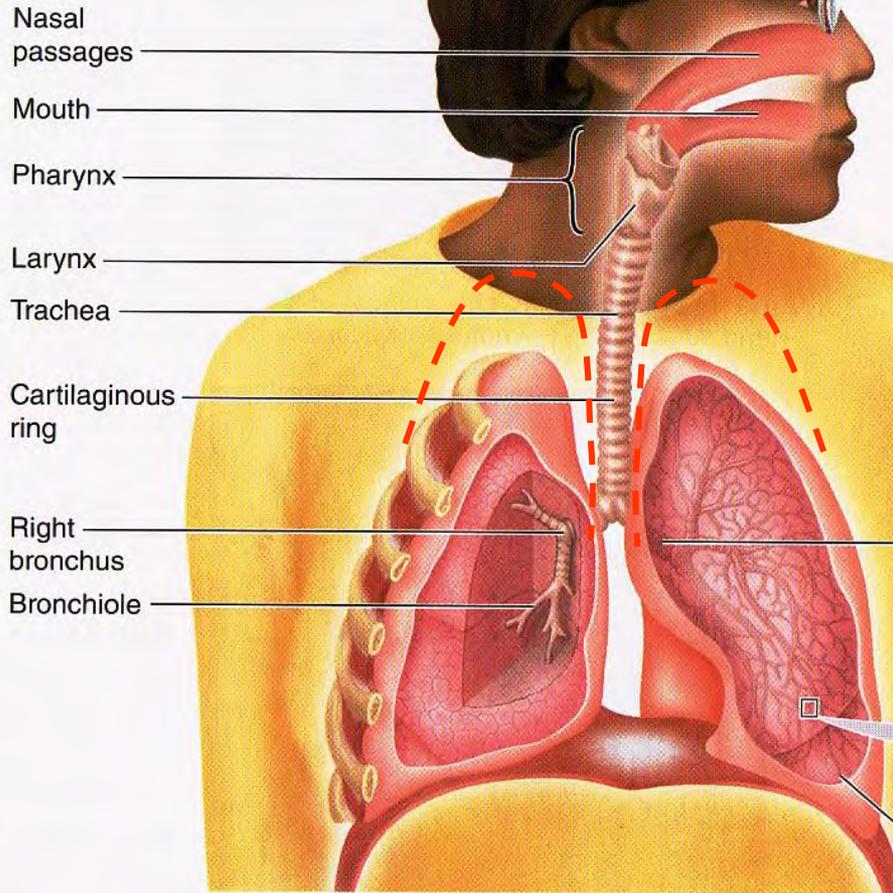

**4** Exchange of  $O_2$  and  $CO_2$  between the blood in the systemic capillaries and the tissue cells

CELLULAR

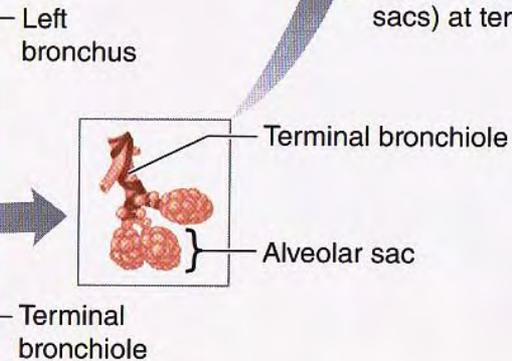

# Respiratory System Anatomy

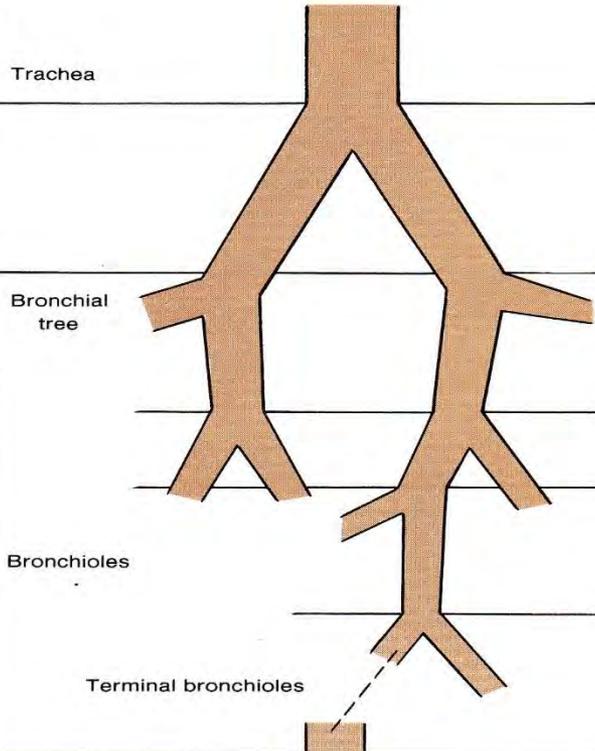

**NB: In vivo,**  
**Cupola or peak**  
**of each lung**  
**goes into neck**  
**> clavicle line!**

**(b)** Enlargement of alveoli (air sacs) at terminal ends of airways

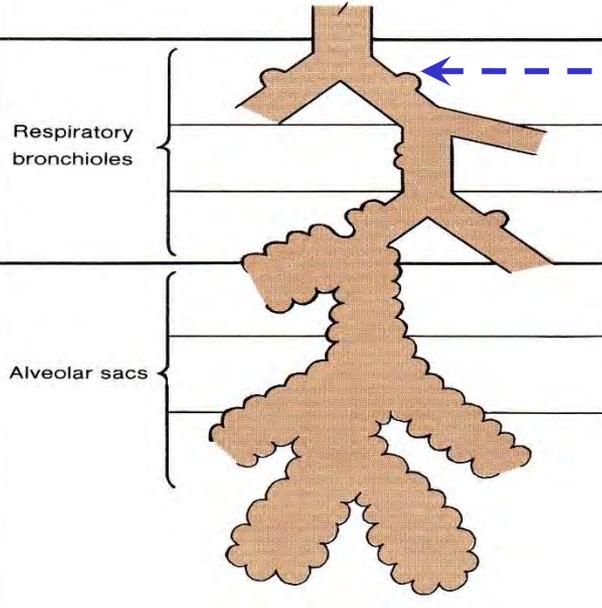

**Conductive Zone**

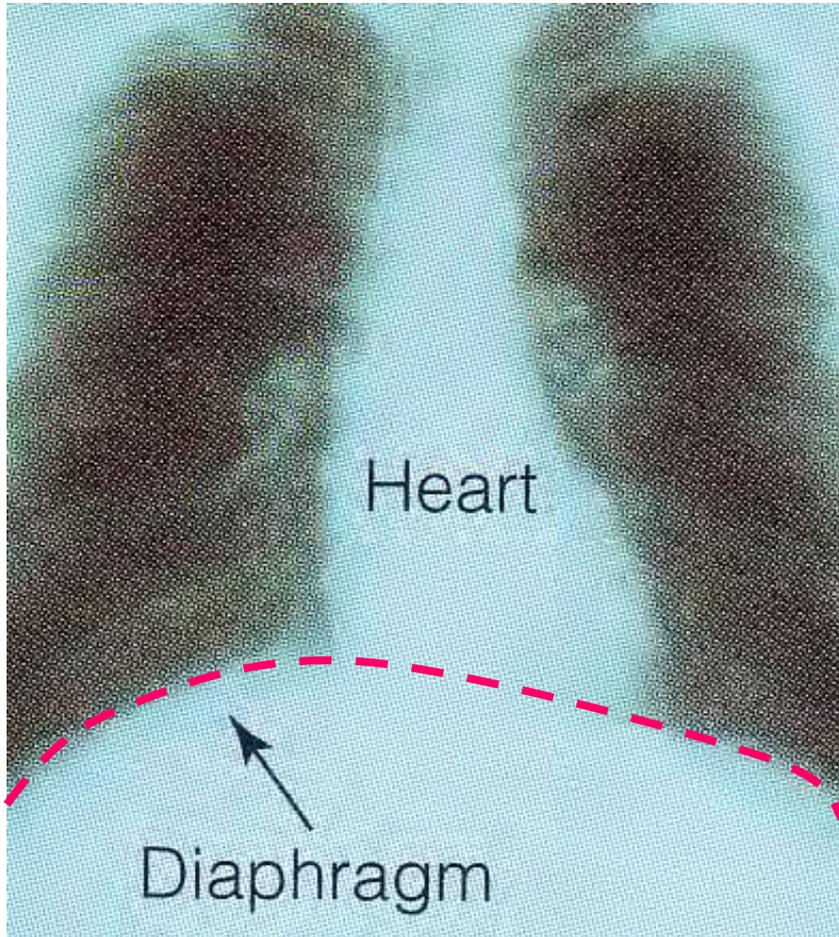

**No Gas Exchange**

**Respiratory Zone**

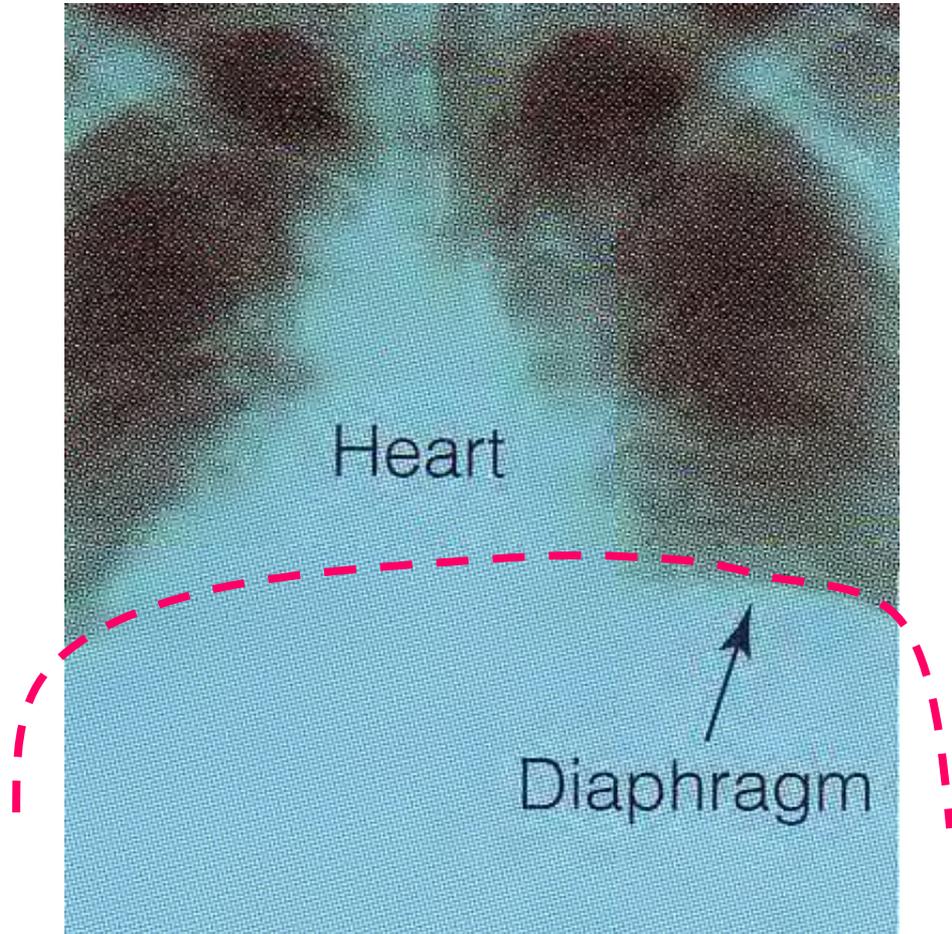

-1<sup>st</sup> alveolar outpouching!

**Gas Exchange**

*Inhale* (active)

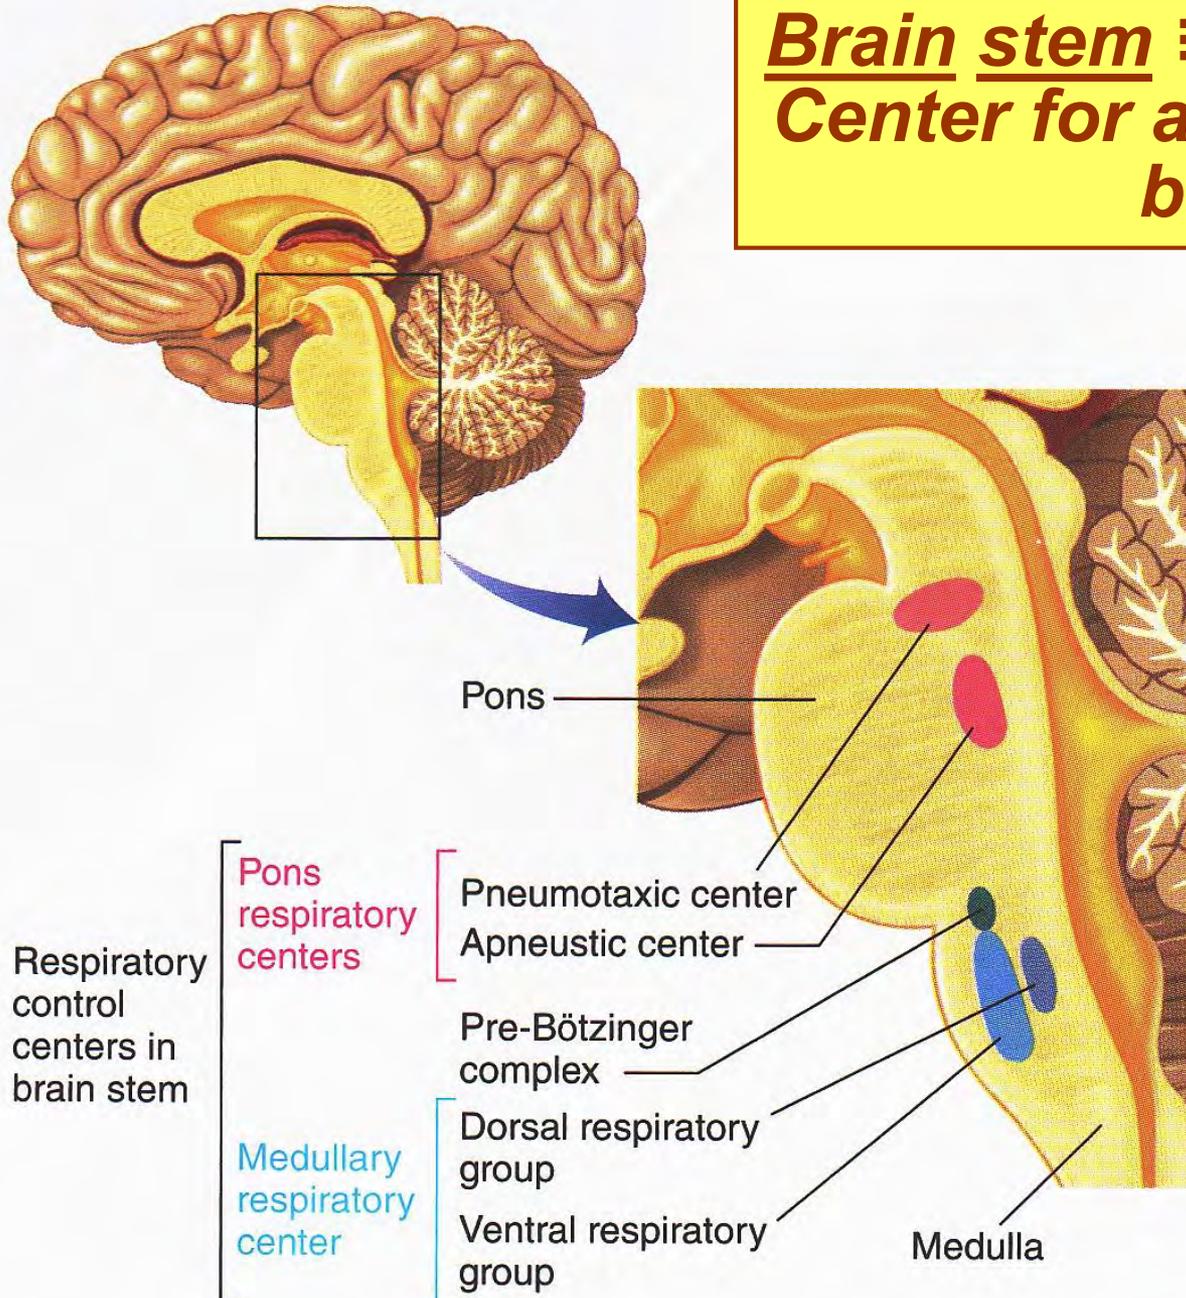

Contract & flatten diaphragm

*Exhale* (passive @ rest)

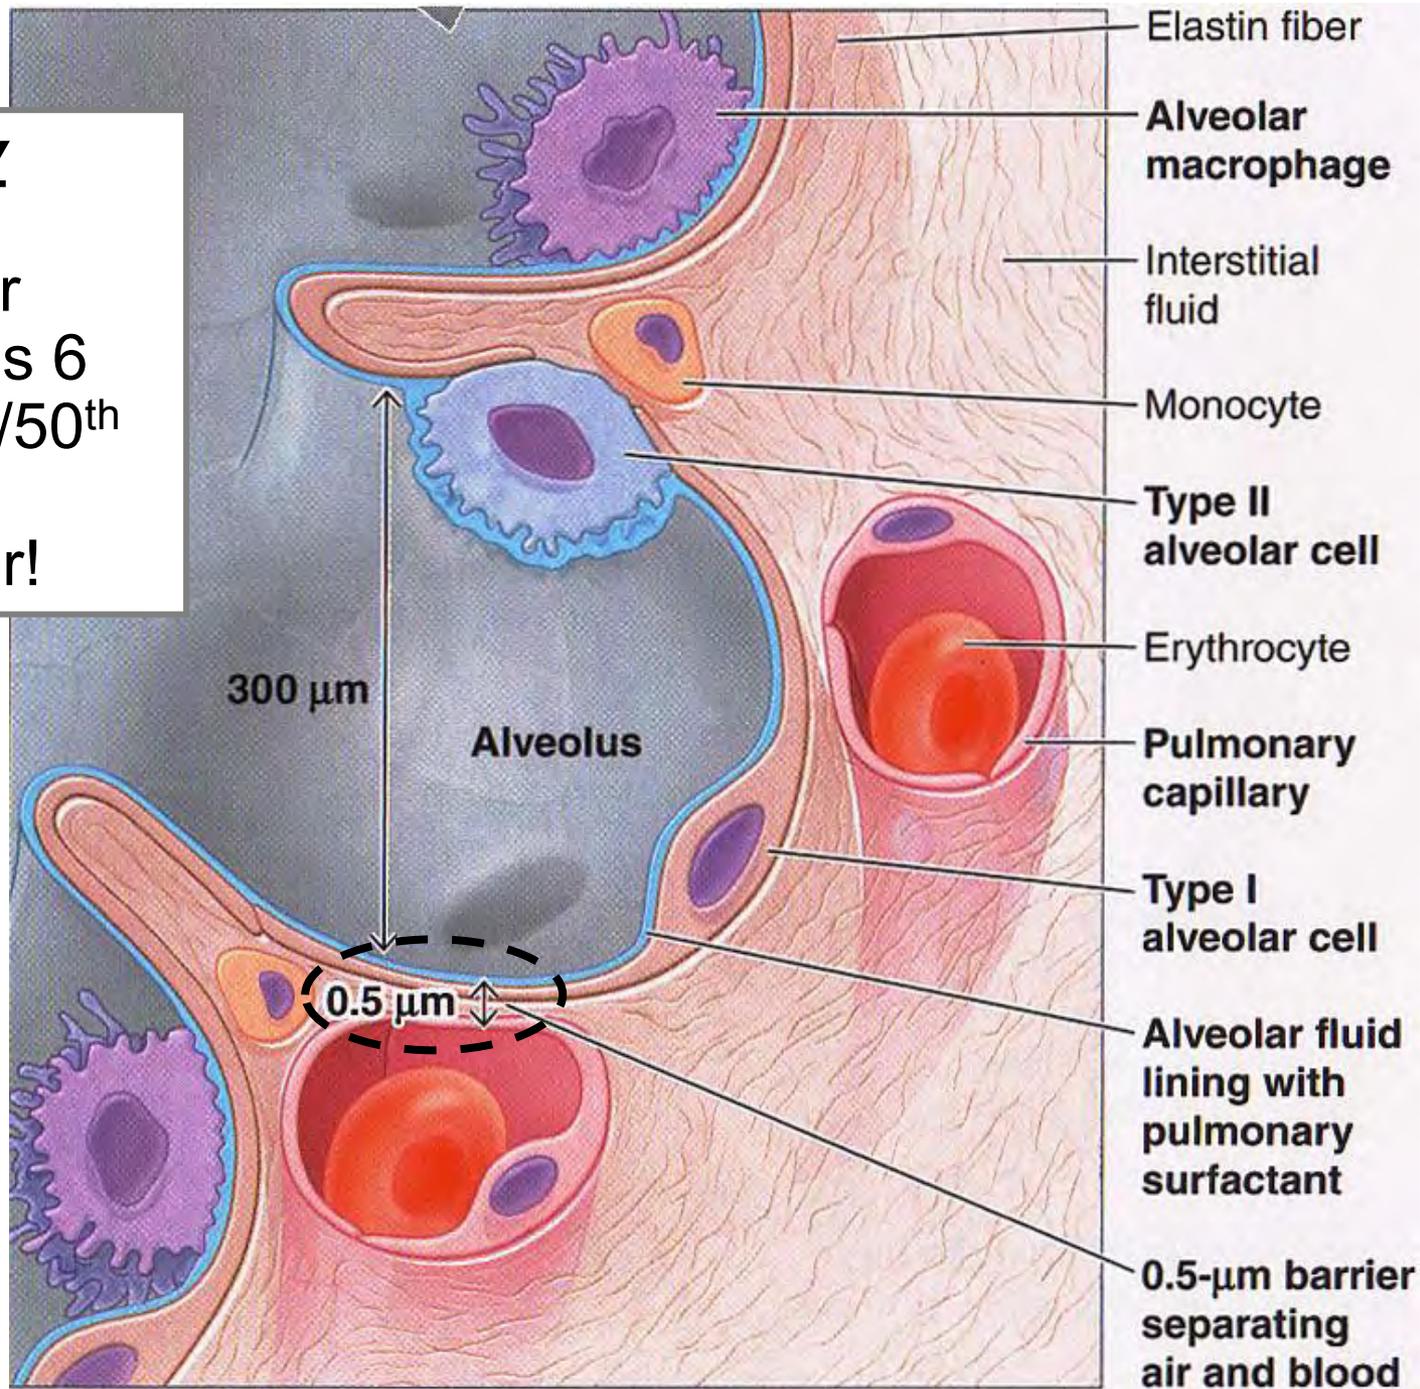

Relax & pouch up diaphragm!

**Brain stem ≡ Control Center for automatic breathing!**

**Respiratory membrane**

separates air from blood, is 6 layers, yet 1/50<sup>th</sup> thickness of tracing paper!

# Gas Exchange

CO<sub>2</sub> LOW

O<sub>2</sub> HIGH

**Across pulmonary capillaries:**

O<sub>2</sub> partial pressure gradient from alveoli to blood = 60 mm Hg (100 → 40)

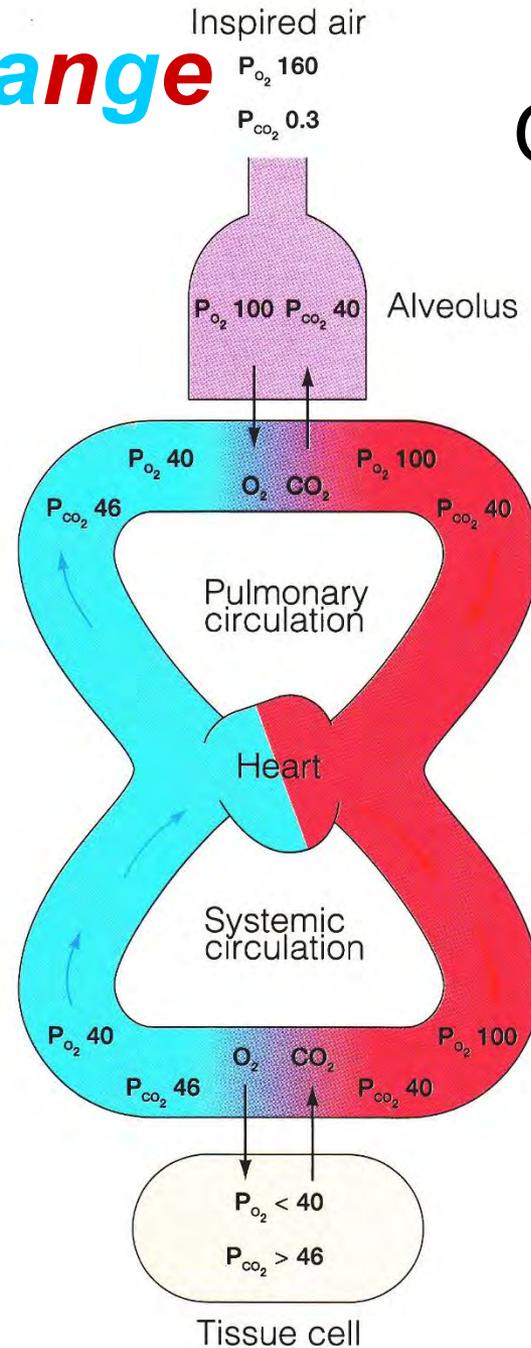

CO<sub>2</sub> partial pressure gradient from blood to alveoli = 6 mm Hg (46 → 40)

**Across systemic capillaries:**

O<sub>2</sub> partial pressure gradient from blood to tissue cell = 60 mm Hg (100 → 40)

CO<sub>2</sub> partial pressure gradient from tissue cell to blood = 6 mm Hg (46 → 40)

Numbers are mm Hg pressure.

CO<sub>2</sub> HIGH

O<sub>2</sub> LOW

# $O_2$ is carried mainly by red blood cell hemoglobin!

Polypeptide chain

Polypeptide chain

Each hemoglobin molecule carries 4  $O_2$  on 4 iron-containing disks!

Carbon monoxide, CO, binds  $\geq 200x$  more powerfully to these same sites, thus poisoning the hemoglobin!

Polypeptide chain

Heme groups

Polypeptide chain

## BI 121 Lecture 17

## **freebase nicotine!!**

Ammonia converts nicotine, the additive agent in tobacco, into a more volatile form, Pankow said. “Ammonia is the thing that helps tobacco companies hook the smoker by providing a means of delivering the nicotine.”

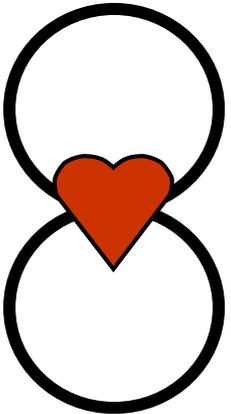

Last October, a former tobacco industry employee revealed that secret industry documents indicated that ammonia was added to tobacco to double the impact of nicotine. Research now indicates that ammonia can boost nicotine availability up to 100x! The Oregon Graduate Institute (now a part of [OHSU](http://www.ohsu.edu)) was the 1<sup>st</sup> to research!

Mayo Clinic Health*

**Breathing 2<sup>nd</sup>-hand  
smoke for as little as  
1/2 hr activates  
platelets almost as  
much as if you were a  
pack-a-day smoker**

2<sup>nd</sup>-hand smoke is the 3<sup>rd</sup> leading preventable cause of death in the US!

A photograph of a man in a tuxedo and a woman in a formal dress. The man is on the left, smiling and looking towards the woman on the right. He has a lit cigarette in his mouth. The woman is looking back at him. The background is a plain, light color.

"Mind if I smoke?"

*"Care if I die?"*

Each year ~45,000 Americans die due to 2<sup>nd</sup>-hand smoke exposure!
