## Lecture 16: Active Learning Questions

1.	What does the A in A-band stand for/represent? What microfilaments are contained within the A-band? What does the I in I-band represent? What microfilaments are contained within the I-band?
2.	Identify key <i>variables</i> that determine <i>skeletal muscle adaptation</i> to <i>exercise</i> . Which of these <i>variables</i> can we manipulate or <i>change</i> ?
3.	Compare-and-contrast the <i>capillary density</i> and <i>myoglobin</i> content of <i>fast-glycolytic fibers</i> vs. <i>slow-oxidative fibers</i> .
4.	What is the <i>pharynx</i> ?the <i>larynx</i> ?the <i>trachea</i> ? What are the <i>common</i> or <i>lay terms</i> for each of these structures? What are the 1 <sup>st</sup> <i>two branches</i> of the <i>trachea</i> ? What structures make up the <i>most distal point</i> of the respiratory system where <i>gas exchange</i> takes place?
5.	What is the <i>chief muscle</i> of <i>ventilation</i> ? What does this muscle do to initiate <i>inhalation</i> ?exhalation? Where specifically (anatomical site) is automatic breathing controlled?
