

Research Projects

Jessica Cronce, PhD
Associate Professor
Counseling Psychology and Prevention Science

Current Research Projects

- ITGA 2025 Initiative. Evaluates the efficacy of a manualized curriculum in reducing the incidence of sexual violence associated with off-campus parties hosted by fraternity chapters. The curriculum integrates a specific focus on how alcohol use is related to associated issues of sexual consent, bystander intervention efficacy, increased risk for perpetration, and harmful aftereffects for survivors, as well as implications for supportive peer response of survivors. (Foundation-funded)
- Social Norms & Skills Training: Motivating Campus Change. Evaluates a multi-component online personalized feedback intervention (PFI) with text-message-based boosters to address specific high-risk drinking events. (NIAAA-funded)
- Personalized Mobile App: Challenging Alcohol Expectancies to Reduce High-risk Drinking and Consequences. Evaluates a mobile phone intervention for 2- and 4-year college students with real-time feedback using individuals' daily expectancies, use, and consequences. (NIAAA-funded)

Data Available from Completed Research Projects

- University of Oregon Student Health Survey: The Impact of the Legalization of Cannabis. Three years of cross-sectional data on cannabis use from >5,000 students, with a smaller (n = 762) longitudinal sample providing data gathered prior to and following legalization of cannabis for recreational use in the state of Oregon.
