

THE ROSE TOWER

Abdulhadi AlMumen // Nancy Cheng // ARCH484Fall2015

As Architects we are responsible to solve Global issues, Such as Global Warming or Sprawl. My vision toward The Rose Tower is to create a vertical community. The Rose Tower will host all sort of needs to the Tenants. By providing peoples need within their community people don't have to drive or walk toward their destination. All they have to do is take the elevator down. The Rose tower accommodate Commercial spaces (mixed used) with a residential units that overlooks a green plane. Each level has different commercial of educational use. Green planes were placed to allow the building to breath and also becomes the communal area for every Level.

Plan

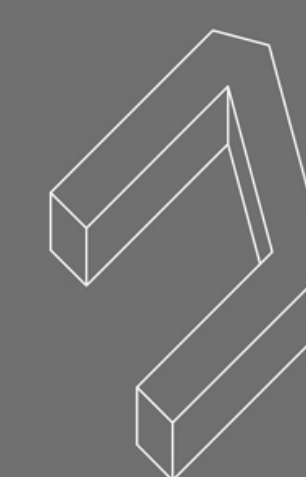

Vertical Community

Residential pods: Hexagon shaped living spaces that could be split to satisfy the needs of the tenants

Green Planes: Garden / parks that allows Tenants to occupy and function. Moreover allows for a communal space and becomes the Lungs of The Rose Tower.

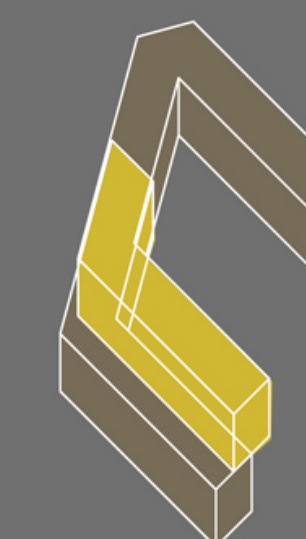

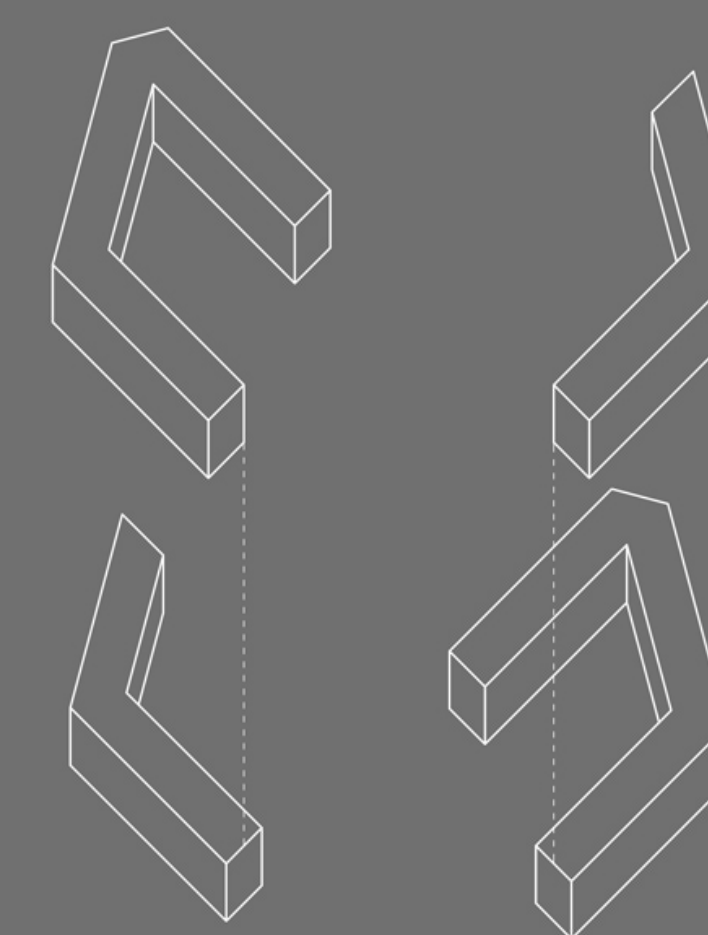

Commercial spaces: would be used to stratify Tenants needs: offices, Convenience stores, Shopping, Restaurants, Schools, Mall..etc
