

Cloud Corridor

MAD | Los Angeles | 2015

architecture should *'manifest the spiritual essence between people and nature'*.

~man yansong

Solution to Urban Sprawl

Reorientation of LA's sprawling urban fabric along the vertical plane generates nine interconnected residential towers. Nature is integrated into the everyday life through nature parks.

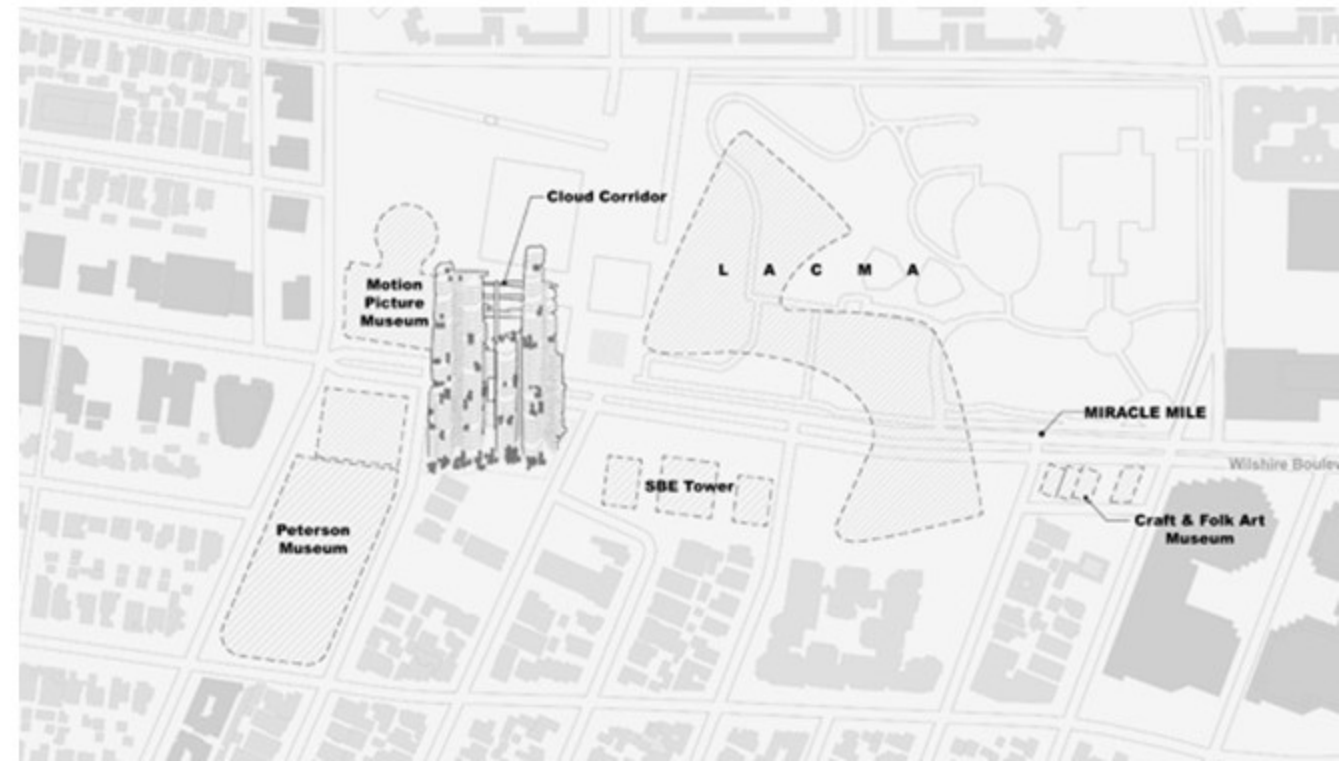

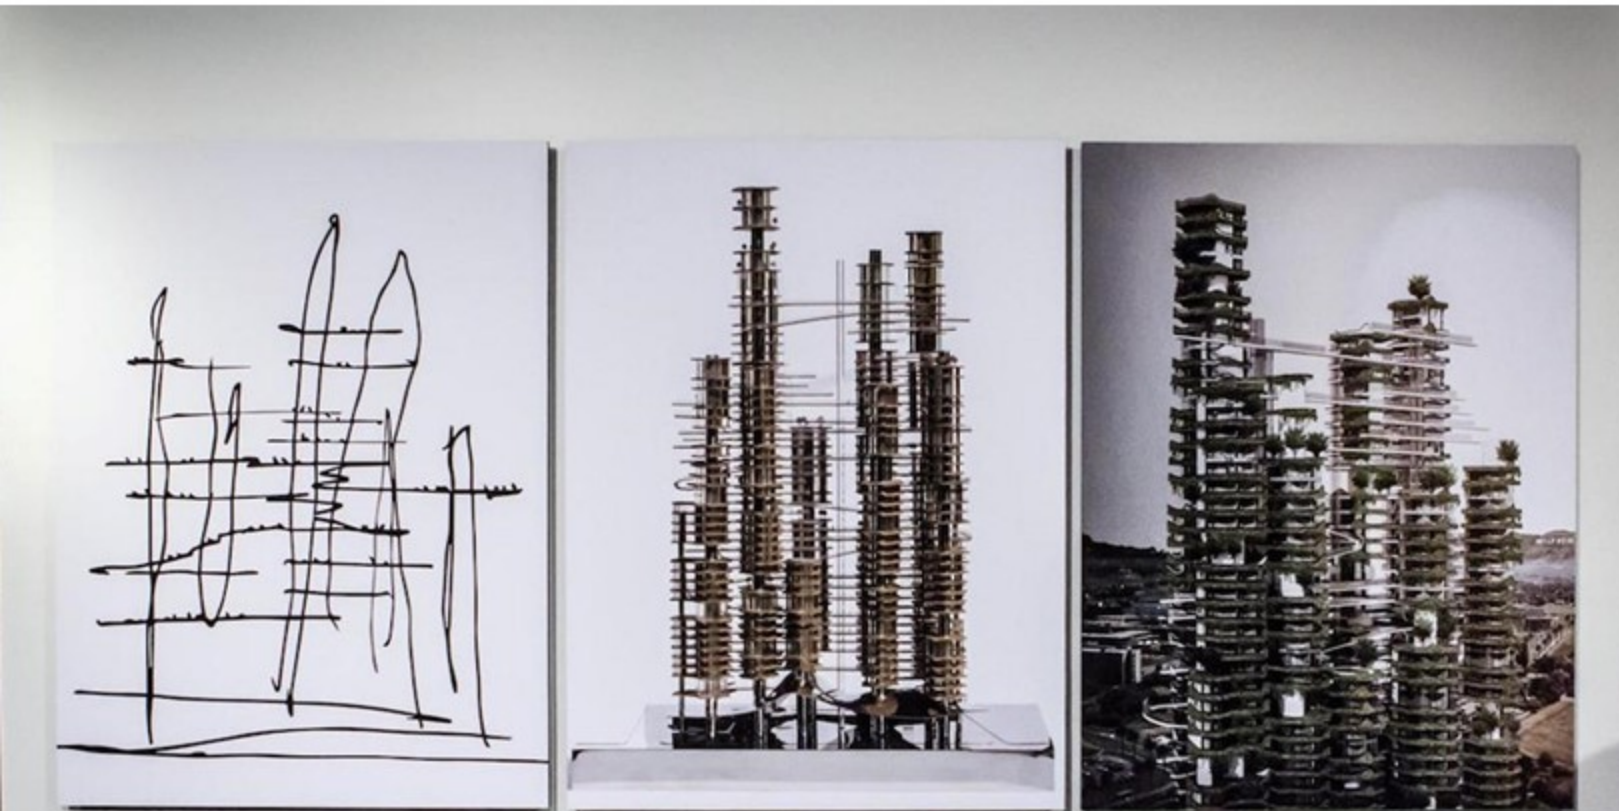

Internal Connections

Sky bridges provide horizontal circulation to promote social interaction among residents while the outermost rim of the towers are preserved for nature parks with viewing platforms. Mixed use residential spaces promote exchange between tower residents.

External Connections

A public park covers a bustling metro hub welcoming visitors to LA's museum corridor. Visitors are encouraged to explore the area through the integration of commercial and public spaces. Separate tower entries are created among the public and residents.
